1. Harris County Trunk System

Yahoo group: HoustonScan (1999 — 2002)
Date: 1999-11-30 18:25:48 UTC
From: kg5ai@xxxxx.xxx
Topic: 1 Message: 1

Looks like the list is growing!
I have the day off so I'm trying to do some scanning work today.

There is another trunk system in use for Harris County SO. I'm not sure where it is transmitting from though. Possibility is the Baytown Bridge. The Freqs in use are:
866.100 control
866.550
866.950
867.375
868.050
868.650
868.9375

I've heard this control channel in use before but never heard anything on the system. Then it went silent for awhile and is back on again. There are a total of 20 frequencies licensed for this system WPGD390. There are three locations under this license. Other two are Tamina (Montgomery County) and near Lake Houston. Don't know what the plan is. Perhaps all these sites will be put in use to extend coverage in the northeast part of the county and the 20 channels will be split up between the three sites. I've heard a very weak control channel on 866.475 which is one of the freqs licensed. Maybe I was hearing that from the site near Lake Houston.

Other updates to HCSO systems:
This is what I've heard for the downtown site:
856.4875, 857.2125, 857.2375, 857.4875, 857.7125, 858.2125, 858.2375, 858.7125, 859.2375, 859.4625, 859.4875, 859.7125, 860.2125, 860.2375, 860.4875, 860.7125, 866.075, 866.425, 867.0625, 867.9125, 868.2375

Huffman: 856.2125, 866.0375, 866.325, 866.450, 866.600, 866.9375, 867.5875, 867.925, 868.125, 868.975

Alvin: 866.4625, 867.750, 867.900, 868.0875, 868.375, 868.600

2. Plants Emergency Frequencies

Yahoo group: HoustonScan (1999 — 2002)
Date: 1999-12-03 01:06:29 UTC
From: jcarroll@xxx.xxx
Topic: 2 Message: 2

Okay I am looking for any emergency frequencies that are in the
chemical plants near Seabrook Texas.. this would include any along the ship
channel (Deer Park, La Porte, Baytown) and the ones in Texas City.
I dont care about channels with regular traffic, I mean in case of explosion
or release. Thanks for any info.

3. New Year's Eve HOT channels? :)

Yahoo group: HoustonScan (1999 — 2002)
Date: 1999-12-03 01:10:17 UTC
From: jcarroll@xxx.xxx
Topic: 3 Message: 3

Are there any particular frequencies (other than regular police/fire) that are active during events like new years eve? I will most likely be in Montgomery County and have started looking for some frequencies in the Northern Harris and Central/Southern Montgomery County areas. But I would appreciate any freqs also for Galveston/Harris Counties. Thanks :)

4. Harris County Smartzone System freqs

Yahoo group: HoustonScan (1999 — 2002)
Date: 1999-12-07 05:26:59 UTC
From: kg5ai@xxxxx.xxx
Topic: 4 Message: 4

Thanks to a little local ducting, I was able to confirm some of the harder to hear outlying sites on the system tonight. This is what I have for the whole system so far:

System 2318 Type II Smartzone WPKL474
Downtown: 856.4875,
857.2125,857.2375,857.4875+p,857.7125,
858.2125,858.2375,858.7125,
859.2125,859.2375c#2,859.4625,859.4875+p,859.7125,
860.2125c#3,860.2375c#1,860.4875,860.7125,
866.075,866.425+p,867.0625,867.9125,867.9375,868.2375,868.4875
old?: 856.7125
MDTs: 856.4625,857.4625,858.4625

Tomball:
856.2375?,*858.4875,860.4625?,*866.575,*866.975,?867.575?,*867.650,868.100?,868.950c*

Huffman: 856.2125?,k866.0375,*866.375,k866.450,k866.600,*866.9375,*867.4625,k867.5875,*867.925+p,k868.0375,868.125?,*868.975c

Clodine: k866.050,866.4875?,866.850?,867.075?,*867.450,*867.550,867.9625?,868.325?,*868.7625,*868.925c

Alvin: 866.4625?,k867.6625,*867.750,*867.900,*868.0875c,*868.375,k868.600,k868.750

+p - 2-way and phone patch use
c - trunk control channel
k - frequency keys up, overflow
* - denotes heard group/frequency
? after freq means I have not heard it

Note - looking for "TAC 5" simplex car-car. maybe (868.0125? or 815 MHz area)

This is not correct! This isn't that easy. It looks like on average, there are supposed to be ten frequencies per remote site. Don't know if that's whats's really going on but let's just assume that for now. Some of the sites above have a few more, some a few less. I haven't spent as much time trying to figure this out as I'd like; plus the added problem of not being able to hear all the sites makes it very difficult. I can hear the downtown, Alvin, Huffman, and Baytown sites OK. If some other folks can work on the Clodine, Tomball and Tamina sites, we might figure this all out (before they change it up again).

FYI, an interesting site to check out about the trunk system is on the web page of the folks who manage the system:

http://www.ctc.co.harris.tx.us/trsradio/

Let me warn you before you think, "why don't we just ask them (fill in the blank)?"
DON'T!!!
These folks would rather us not listen to their system, much less have lists and distribute them amongst ourselves. If you ask them for help, you most likely won't get any, and may get something like "it's none of your business" or "we don't have to tell you" reply.
Just read what they have to say on their webpage and leave it at that.

Now a couple of questions for you all. This is my understanding of how SmartZone works when you hear talkgroups coming through systems other than the one being directly used. I monitor the downtown system most of the time because I hear the most activity and it has one of the best signals where I am located. But I don't always hear every talkgroup that is being used at every remote site. The way I understand it now, unless someone is set to that talkgroup on the system you are listening to, the talkgroup on the remote system won't come through. I would guess that the same is true in reverse; that unless someone on a remote system is set to receive a particular talk group, someone using that talkgroup through the downtown system won't be transmitted through the particular remote system you are listening to (get my drift?). For example, I have heard Jersey Village on talkgroup 8368 before. I think I was listening to the Tomball trunk at the time. I've never heard it listening to the downtown system. Using the reasoning before, that would be because no one tuned to group 8368 was sitting on the downtown system at that time. This is why you don't hear SO west dispatch or northwest constables coming through the Alvin site. No one (for good reason) in those areas would/should be on the Alvin system. If they happened to switch to the Alvin site, I recon that all of a sudden, I will start hearing those talkgroups. Is my understanding of this correct?

So does anyone know which site (if any) Jersey Village uses (Tomball or Clodine)? I think they still use VHF for most activity but does anyone out there know for sure how much JV uses the trunk system?

Topic: 5 Message: 5

Have the day off and, you guessed it, playing with the scanner. Does anyone know if someone important is coming or is here? I haven't been watching the news lately. I've been searching through the federal VHF band and hit on some active freqs today. 165.375 with digital comms, 166.5125 with test tones being sent, 164.8875 and 167.025 the Secret Service pager. I don't think the pager gets regular use, just when there is an operation going on. Maybe I need to find some news and see who's around. Also heard Omaha 05 on 164.600 today talking to ground units. Sounded like they were either at Ellington or Hobby. Probably not related.

Topic: 5 Message: 8

With Clinton coming into town tomorrow, I thought I'd review some of freqs the Secret Service uses so folks might be able to listen in on the action.
The following are freqs excerpted from my DFW freq list where I've had the most experience hearing secret service comms.

167.900/166.050 FEDERAL Secret Service-Dallas Field Office-tone burst
165.7875 FEDERAL Secret Service "Baker"
165.375 FEDERAL Secret Service "Charlie"
407.850 FEDERAL Secret Service "Echo" Aircraft Phone Uplink
415.700 FEDERAL Secret Service "Foxtrot" Aircraft Phone Downlink
165.2125 FEDERAL Secret Service "Mike"
164.8875 FEDERAL Secret Service "Oscar" Limousine
166.5125 FEDERAL Secret Service "Sierra"
164.650/166.5875 FEDERAL Secret Service "Tango" Local Primary-tone burst
167.025 FEDERAL Secret Service "Whiskey" Pager
162.6875 FEDERAL Secret Service "Yankee" Uplink to aircraft
171.2875 FEDERAL Secret Service "Zulu" Downlink from aircraft

The Echo/Foxtrot pair is used in several areas of the country where a military base has been set up with the uplink freq of 407.850. I have no idea where these bases are but I believe one was at the Dallas Naval Air Station.
I do not know if one is in the Houston area but if there was, most likely it would be at Ellington. I believe cargo planes were landing at Ellington yesterday with Limos and possibly the presidential helicopter which was heard talking to Hermann Lifeflight control on 128.850 earlier today. I suspect that Clinton will come into Ellington since it already has military police there and the least amount of civilian traffic in the area.

These I've also heard in College Station:
162.6875 USSS "Yankee" Aircraft Downlink
164.650 USSS "Tango" Alternate Command Post
164.8875 USSS "Oscar" Limousine, Pres. Prot.
165.2125 USSS "Mike" Former Pres. Protection
165.375 USSS "Charlie" Command Post Primary
165.7875 USSS "Baker" Former Pres. Prot. (used for Bush in town)
166.5125 USSS "Sierra" Security details
167.025 USSS "Whiskey" Pager
171.2875 USSS "Zulu" Aircraft Uplink

These, I've heard in Houston:
164.650/ *FEDERAL Secret Service "Tango"
164.8875 *FEDERAL Secret Service "Oscar"
165.375/166.400 *FEDERAL Secret Service "Charlie"-digital system
165.7875 *FEDERAL Secret Service "Baker" Former Pres. Security detail
166.4625 *FEDERAL Common for several agencies (Customs, ATF)
166.5125 *FEDERAL Secret Service "Sierra"
167.025 *FEDERAL Secret Service Pager

Search between 164.400 and 167.000 for other possible activity.
Other things to listen to since most SS comms will be encrypted would be Houston PD, Harris County SO, Media freqs, possibly the City of Houston trunk system and possibly City of Pasadena downtown Houston system.

With presidential helicopter here, might listen to Ellington tower, 126.050/253.50, Houston ATC 134.450/284.000, and 123.025 helicopter air-air.
The Yankee/Zulu SS freqs listen above are normally active during landing and takeoff of Air Force 1. This is used between the plane and Limo. Comms are usually encrypted on these I belive though.

These freqs have been listed for use by the Nighthawk helicopter fleet:
46.750, 46.70, 46.80
375.000
34.350
142.750
265.80

If you do catch some of the action, please post what you hear to the group. Take special note of what type of comm you heard on what freqs and callsigns you heard used. It may make things easier to plan for next time you want to listen in.

I'll be listening towards evening when I get off work.

This is your mission. Good luck!

Myles Barkman

10. UHF Fed band

Yahoo group: HoustonScan (1999 — 2002)
Date: 1999-12-18 06:21:47 UTC
From: kg5ai@xxxxx.xxx
Topic: 10 Message: 10

Would like the folks around Houston to help ID some stuff in the 406-420 MHz Federal Government band.
First of all, there is a trunk system somewhere around here that is usually very weak to me but sometimes I can pick it up here in Pasadena. I've found a couple of more channels the last few days for it.
406.475
408.075
408.300
409.100
409.425
410.150

There may be more but that's all I have so far. Any one of the first four channels could be the control channel. Sounds like a prison. I'm wondering if it could be the Corrections Corporation of America's Houston Processing Facility just to the southeast of Bush Airport. It is a private owned prison that (from my understanding) houses INS inmates. Maybe that's why they can use the fed freqs.

Some others I'm trying to ID might be used by the VA hospital south of Hermann Park. If anyone is close by, see how strong these are:
408.025 - digital system
408.100 trunked
409.650 trunked
410.025 trunked
412.425 trunked
408.2375
408.9375 Ch.5
409.6375

Also trying to identify location/agency for the following:
406.375
409.200
409.275?
410.200
410.325
413.800
414.300
417.600
418.300

Have some for the VHF federal band but will work on that later.....

11. Deer Park PD

Yahoo group: HoustonScan (1999 — 2002)
Date: 1999-12-22 06:45:48 UTC
From: kg5ai@xxxxx.xxx
Topic: 11 Message: 11

Not that big a deal but I thought I'd just mail *something* on the list.

Anyone notice that Deer Park PD changed frequencies in the past week or so?
Not only that but it's the first agency I've seen start to use some of the new freqs allocated for the new narrowband specs.

They are using 154.7925 output with 158.9325 input. Strange look to these freqs, huh? Just a year ago, I would have thought they were a typo. Fortunately, most receivers are wide enough to pick this up on either 154.790 or 154.795 MHz. You just might get some interference from agencies on 154.785 or 154.800 MHz (not that there is anyone around here using those that close).

Deer Park PD is also using 155.0025 simplex with no CTCSS tone for what they call "TAC". It looks like this was licensed to be a repeater but it's not that way yet anyhow. Other freq they are licensed for is 158.9775 but I haven't heard activity on this yet. Still using 153.875 for public works.

12. Lifeflight in Houston

Yahoo group: HoustonScan (1999 — 2002)
Date: 1999-12-23 15:25:51 UTC
From: Christopher Hysinger
Topic: 12 Message: 12

I've been trying over the past two days to locate the dispatch frequency for Lifeflight in Houston. I have the following frequencies as currently used or having been used by Lifeflight in the past:

155.235 - Lifeflight patient reports - no activity heard
128.850 - Lifeflight control/aircraft (seems to be rebroadcast of 208 below)
HC talk group 208 - seems to be main Lifeflight channel
163.250 - Herman hospital paging - still in use but no Lifeflight dispatches heard

Now, from what I have heard, most Lifeflight communications take place on talk group 208. However, I have not heard any incident dispatches on this channel. I do hear mention of helicopters landing at a "north base" and a "south base". Are all the Lifeflight units based at Herman, or are they located at several locations around the region? If they are spread out, would dispatches be heard through Harris County site 1 or could they possibly only be heard on one of the other Harris County sites? I guess one reason for a lack of dispatch activity on the above radio frequencies is that Lifeflight dispatches helicopters through some other means, such as a data link to computers in the crew ready rooms.

Anybody out there have any information on how Lifeflight operates? Any help would be greatly appreciated.

Regards,

Chris

> 128.850 - Lifeflight control/aircraft (seems to be rebroadcast of 208 below)

The "LifeFlight Control" base broadcasts on both the 128.85 and the 208 talkgroup simultaneously at all times (helos are not simulcast from the talkgroup to 128.85). 128.85 may be patched to the talkgroup but I don't know this for certain. The helos operate primarily on the 208 talkgroup. The only time I hear helos on 128.85 is when the helos are flying pilot-only or when non-LifeFlight medevacs arrive/depart the Medical Center.

I know for certain no helos are based at Hermann. My understanding is that they are based around the Houston area. I don't know how they are dispatched, although I imagine it may be by landline.

Topic: 12 Message: 14

they have 2 primary spots that they use in the area HERRMAN for one and in Galveston they use UTMB as a south base, in galveston since it went 800 they use the industrial emergency talk group on IMAS (industrial mutual aid system) tt listing 55376 this is galveston now. and in the harris county system the connect mainly to that cities primary fire frequency or there tac frequency. As for comms with the hospitals they stil use the 400 system primarly. i hoope this helps you out. they can be heard dispatched and landing on there harris primary 208, also check out the AHEARN freq for crew dispatching vitals to the hospital.

Does anyone have the frequencies for the Dickinson and League City areas?

If you could send them it would be greatly appreciated.

I am new to the site.

I have 2 scanners, one is for lower frequencies and an 800mhz.
Must I have a trunking scanner in order to keep up with stuff?

Can anyone answer this question?

43. Frequency Counter

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-01-18 01:31:26 UTC
From: Joshua Carroll
Topic: 43 Message: 43

Okay I hear that a frequency counter finds what frequencies are being broadcast and display's them for you (at least that's the general gist of it right?). Anyways, where would one pick one up that is reasonably priced? Also what about features? Im looking to buy one, and dont exactly know what to get. Any help is appreciated.

Thanks,
Josh

46. HPD Aircraft

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-01-24 18:50:57 UTC
From: Mike Holland
Topic: 46 Message: 46

You can hear HPD Aircraft running Traffic with a laser gun on 460.525.

Today they were on 290. Aircraft spots vehicles for solo units. I got to see the new HPD dispatch center. Neat stuff all radio comms are touch screen. Each dispatcher has a handheld in case they need to get up to stretch. CAD software is module based interfacing MDT, Radio ID, radio log, and TLETS. Neat Stuff!

Mike

47. Secret Service activity

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-01-25 20:11:00 UTC
From: Eric C. Carlson
Topic: 47 Message: 47

Secret Service "Charlie" 165.375 [103.5] active in the past hour. Heard PASSKEY TRAIL, Houston, and agents in the clear (and amazingly using the repeater) regarding arrival/departure at an airport. I show PASSKEY as a codename for Gerald Ford. Agents went to "coded" to discuss prisoners to be on the flight.

48. Pasadena Fire Dept

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-01-26 04:56:43 UTC
From: Mike Holland
Topic: 48 Message: 48

As most people know, the Pasadena fire dept uses a VHF patch for toning out in conjuction with their 800 system. What most people don't know is that the patch works in both directions. 154.010 w/pl of 167.9 will also key the Disp 1 Fire Talkgroup. Same with the Fire/Mutual Aid Channel of 154.280. This will key their EM-OPS 1 Talkgroup.

From: David P.
Topic: 49 Message: 49

There used to be a great web site for freq. info for the Houston area. The web site address was: http://idt.net/~kb5wix/ Now lately I can't get to the site. Anyone know if the site was moved or just taken down? It would be a shame if it was taken down, there was LOTS of useful info there.

thanks.
David.

51. Baytown PD move to 800

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-02-05 05:04:17 UTC
From: kg5ai@clarc.org
Topic: 51 Message: 51

Got an email from someone asking me where Baytown PD moved to. I didn't even know they switched over. Well, I plugged in the Baytown HCSO site freqs and found several groups in use:

16208 Baytown PD Ch.A1 Primary
16240 Baytown PD Ch.A2 Secondary
16272 Baytown PD Ch.A3? Car-Car
16912 Baytown FD/EMS

FD Tone out may still be occuring on 154.250 MHz but don't know if 855.2125 might still be used.

52. Galveston County trunk

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-02-05 05:15:07 UTC
From: kg5ai@clarc.org
Topic: 52 Message: 52

Tried to send this out before but something malfunctioned. Wanted to ask a gentleman, chrisemtp@..., a question about the Galveston County trunked system but his address is no longer valid. If anyone knows a new address for him, please send it to me or ask him to email me.

Question was about Galveston County EMS and their talk groups. I'm looking for talkgroup numbers for EMS ADMIN, GMT-1, and GMT-2. Also wondering if anyone has come across any new talkgroups lately. I haven't been listening to Galveston County much lately.

Also, has anyone heard any news about Dickinson moving off the Galveston system and going to League City's system?

53. Emergency Frequencies

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-02-05 22:52:43 UTC
From: Joshua Carroll
Topic: 53 Message: 53

Are there any frequencies that the plants use during an emergency? Hopefully not just 2-way communcations, but with a repeater. I live in Seabrook Texas, and sometimes hear some sirens over toward LaPorte, and Im wondering if it was trouble at the plant. Would like any help from any plants in the LaPorte, DeerPark, Baytown, and Texas City area.

Thanks,
Joshua Carroll

Topic: 53 Message: 54

Joshua,

Try the frequencies for C. I. M. A : 488.8875
489.0875
489.1125

All three of these frequencies go through a repeater that has coverage over most of the industrial area. I used them when I lived in Seabrook with a lot of success during plant emergencies.

From: Eric C. Carlson
Topic: 55 Message: 56

Along the lines of this Emergency Freqs thread, I think it would be interesting to hear what everyone considers the "top" frequencies to monitor in Houston (aside from the usual police/fire/EMS stuff). CIMA and PIES have been mentioned for emergency situations. I find the various TV station's news desk/helicopter frequencies, Metro Traffic/Video, and 123.025 (helo air-to-air) to be at the top of my list.

57. HPD SWAT

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-02-07 03:12:11 UTC
From: David P.
Topic: 57 Message: 57

Did anyone else listen to the HPD SWAT situation Saturday night? I heard about it on 460.350 then drove down the road to the location. I heard the SWAT team talking to their command post on 465.225. Anyone know of the freq. that SWAT uses to talk team member to member? Most SWAT teams use special radios to communicate to each other very quietly when they do a entry. I believe the mic connects to their neck somehow and picks up the voice box? All they have to do is barely whisper. These close range radios is what I want the freq for if anybody knows it.

58. Enron Field

Yahoo group: HoustonScan (1999 — 2002)

From: ben compere
Topic: 59 Message: 59

Who is the license holder? Or, what are the map coordinates for the stadium? That info would help for either an FCC or PerCon search. From what I've observed lately, when the field opens, search the 451-452/456-457 range. New business licenses are being awarded often in that frequency range.

60. Enron field and top freqs

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-02-09 06:47:44 UTC
From: kg5ai@clarc.org
Topic: 60 Message: 60

Coords for stadium are 29-45-24 N, 95-21-24 W.
I can look for the freqs but if Mike can't find them, I don't think I have much hope. SWS is just down the street from me and I have the day off tomorrow. Hmmm.... Will see.

Just took a look at just the pending database for activity 1 mile within stadium. Looks like several 490 MHz licenses, some 851-866 stuff and some 937 MHz stuff. If it's LTR or any other kind of shared trunk system, will be hard to find since it won't be licensed by the ballpark. May have to wait until someone finds it (or finds someone). Trying to look at the licenses already existing is insane. Wish I could do a search within a block of a lat/lon instead of a whole mile.

As far as top freq in area to listen to. That's hard to narrow down but I'll try.

450.5875 PIES (161.640 old freq, haven't heard but I wouldn't want to give up on it yet)
488.8875 CIMA (Channel Industries Mutual Aid)
489.0875 CIMA
489.1125 CIMA
155.265 Civil Defense for several cities in area. Will mostly hear Fort Bend County EMS.
121.500/243.000 Aviation Emergency, not heard very often but it's the times you hear something that counts
148.125 Civil Air Patrol repeater (see above about 121.500)
148.150 Civil Air Patrol repeater
154.280 Fire Mutual aid. If nothing else, you hear Lifeflight alot.
157.050 US Coast Guard
150.980 repeater possibly used for oil spill ops (never heard)
454.000 another repeater possibly for oil spills
409.600 JSC Fire net
409.175 JSC Emergency net
453.100 Galveston County EOC (don't know if still use)
462.625 Galveston County EOC (not sure if this even exists)
146.840 Houston RACES/Skywarn
453.675 Houston Major Fires
465.225 Houston PD SWAT
460.075,460.375,465.075,465.375 Houston PD TAC channels

As far as on the HCSO trunk system, I like to monitor:
208 lifeflight
10928 DPS
8336 Harris County Emergency Management (rarely heard)
9392 Harris County SO SWAT (also rarely heard)
9424 Harris County SO SWAT Ops (also rarely heard)

489.0875 CIMA
489.1125 CIMA
155.265 Civil Defense for several cities in area. Will mostly hear Fort Bend County EMS.
121.500/243.000 Aviation Emergency, not heard very often but it's the times you hear something that counts
148.125 Civil Air Patrol repeater (see above about 121.500)
148.150 Civil Air Patrol repeater
154.280 Fire Mutual aid. If nothing else, you hear Lifeflight alot.
157.050 US Coast Guard
150.980 repeater possibly used for oil spill ops (never heard)
454.000 another repeater possibly for oil spills
409.600 JSC Fire net
409.175 JSC Emergency net
453.100 Galveston County EOC (don't know if still use)
462.625 Galveston County EOC (not sure if this even exists)
146.840 Houston RACES/Skywarn
453.675 Houston Major Fires
465.225 Houston PD SWAT
460.075,460.375,465.075,465.375 Houston PD TAC channels

As far as on the HCSO trunk system, I like to monitor:
208 lifeflight
10928 DPS
8336 Harris County Emergency Management (rarely heard)
9392 Harris County SO SWAT (also rarely heard)
9424 Harris County SO SWAT Ops (also rarely heard)

All of you that can scan 900 Motorola systems might want to check the Brown and Root System for the Rodeo. They have loaner radios every year for the big event. They are in use and I have seen the radios out there this year. A bunch of simplex is being used in the business band range for the cookoff. Try the FRS freqs and scan around. You'll hear the metro traffic guys on 450.7125 simplex out there and most of the media will use their own repeaters on 450.XXX at the rodeo for comms.

66. Brown and Root and Rodeo

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-02-12 19:40:33 UTC
From: ben compere
Topic: 66 Message: 66

Tried to listen to the Brown and Root system on my TrunkTracker II, but I was unsuccessful in the trunked mode. I could pick up the control channel (938.9750) in the conventional mode, but the radio would not lock onto it. However, on 938.2375, 938.2500, 938.9875, and 938.9500 I could monitor the action. But, I did have to contend with other users of the system.

The same thing happens when I try to listen to the Alief ISD system.

Is there any way around this, or is this a built in anomoly of the TT2?

Thanx in advance...

67. IPN-HOU List

Yahoo group: HoustonScan (1999 — 2002)

Topic: 67 Message: 67

A new Onelist mailing list has been created for people interested in the Incident Paging Network (IPN) in place for Houston, Texas. For those who are not familiar with IPN, more information can be found at http://www.incidientpage.com/. Basically, IPN is an email/pager incident notification network to alert users of major police/fire incidents in various areas around the country.

The new list, IPH-HOU, can be subscribed to by following http://www.onelist.com/subscribe/IPN-HOU. This list is open to all who are interested. The purpose of this list is not to duplicate what is posted on Houstonscan, but rather to exchange information related to houston related IPN topics and to provide updates on previously dispatched incidents.

I have sent this email out on Houstonscan because I know not all IPN users subscribe to the IPN-dispatchers list.

Thanks,

Chris

Thanks Mike for the Baytown groups. I've heard activity on all but TAC 2-5.
I was throwing away some old HCSO trunk lists and noticed that I've heard the Radio Shop group probably on the downtown system some time ago.

Does anyone know what's going on around here that warrants the Secret Service activity I've been hearing? Freqs I've heard so far are 164.8875 (digital comms-not to be confused with DES) and 165.7875.

The firefighter memorial service as most of you probably are aware, is Friday morning at Rice Stadium. I've heard they are estimating 85,000 people will attend (the stadium capacity is 70,000). For anyone who may be monitoring this event, Rice University PD and EMS can be found at 453.2 (R) [146.2]. RUPD/REMS generally do not have primary responsibility for large stadium events such as this, except Rice football games when they hire overtime help from other agencies. But anyway it's worth plugging into the scanner if you'll be listening then. Details on this and other Rice freqs can be found on-line http://www.owlnet.rice.edu/~ecarlson/scanner/rice.html

Just had some insisght into Mardi Gras in Glveston this year. Galveston County s setting up some special talkgroups on their system for the event. The city of Friendswood is being lent some Motorola STX's from Harris County to use for the event. Harris County's Command Semi-Truck will be there. They operate on the NACO Talkgroup on the Harris county System. I'll try to post talkgroup numbers. Keep your ears open!

Finally got into position to monitor the Brown and Root system for the Rodeo. Following are some talkgroups gleaned by my TT2. Not all are confirmed, and some appear to be images.

1040
1104 Parking at dome
4608 Livestock Vehicles being parked
4624 Parking
4640
4656 Equipment Committee
4672
4864
8816
8832
8864
8880 Administration/transportation of VIPs
and handicapped persons at the
dome/hall/arena
8912
8928 Same as 8880
8944 Remote/satellite parking
8960
9104
9136
9184 Dome parking
9126

Also, PD Metro is using its Special Events talkgroup, 15344

Thank goodness for repeaters. Before, one had to be almost at, or in the AstroZone to follow the fun and games. If anyone has caught any of the above and can add/subtract/correct, please do.

B&R frequencies:

938.2375, 2500, 8875, 9000, 9125, 9250, 9375, 9500,9625, 9750,
9875,
939.0000

85. Galveston County, Harris County, Mardi Gras

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-02-25 21:22:42 UTC
From: Mike Holland
Topic: 85 Message: 85

Most Mardi Gras Traffic will be on

56272 Galveston County - Special Events H
56304 Galveston County - Special Events I

You should also be able to ID some other Talkgroups such as Friendswood. They have a talkgroup. Also Listen to the Dickinson Site on Harris County. There should be some Mardi Gras Traffic there as well.

Mike

86. Traveling from Houston to San Antonio

Hey Im traveling from Houston to San Antonio this weekend. I have Houston frequencies, but are there any other frequencies I should program into my scanner while traveling I-10 West to San Antonio.. as well as San Antonio. I hear that San Antonio is trunk system (Bexar County).. is that true? :) Any help is apprecaited.. Thanks.

From: David P.
Topic: 92 Message: 92

Anyone have a image that shows the boundaries of the H.C. Constables? I think I am in Precinct 4 but not sure. I'd like to know which one so I can program the corresponding freq's in my scanner.

My area is NW Houston, fairly close to Jersey Village, and not to far from Spring Branch.

thanks,
Dave

93. Trunking Musings

Topic: 93 Message: 93

I have been monitoring (somewhat) a 5 channel federal trunked system in downtown Houston. This is probably the new federal jail on San Jacinto. The frequencies discovered, so far, are 408.100, 409.650, 410.025, 412.425(c), and 414.300. Unfortunately, I have only been able to "monitor" when in the conventional mode. And, all I get is the horrible Astro Burp. The control channel locks in great on my TrunkTracker II, but then no talkgroups appear on the display. Does anyone know what the correct BAS frequency (default is 406.000) and Offset frequency (default is 50 KHz, I've had success with 25KHz) are? And, am I using the correct frequencies and especially the correct control frequency?

On another note, am I the only one having trouble monitoring tonight (Tuesday, 3-22-00)? From what I've read in the past, when bad weather, low clouds, drizzle, etc, moves in, the further away from the tower(s) one is, the poorer the reception. Tonight is no exception. I am in the greater Katy area and it is nearly impossible at times tonight to receive either the Downtown or the Clodine Towers, and I am about 8 miles from the Clodine tower. Very Interesting when both scanners go quiet, no control frequencies are accessed from the Mason Rd/Katy Freeway overpass and I am looking through the mist towards the Clodine tower which is located at the south end of S Mason at FM 1093. This is both with a RS Pro-2066 and a Bearcat TrunkTracker II.

94. hot night in pasadena

Second time tonight I've heard Lifeflight sent to Pasadena. First time was a couple of hours ago when it sounded like a man threatening police with an axe may have been shot by police. Right before Lifeflight got on scene, they were cancelled and sent to the Aldine area. Now police are dealing with a shooting at a church where the suspect apparently shot himself in front of the church after wounding three others. Will have to watch the news tonight to see what happened. Sounds like they are dispatching two helos now.

95. DSS Activity

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-03-23 05:58:51 UTC
From: Eric C. Carlson
Topic: 95 Message: 95

I monitored some Dept. of State Diplomatic Security Service operations today (Wednesday) relating to the visit of the Egytian Foreign Minister. Here's the details for anyone interested..

409.625 [151.4] "primary" with "baltrovitz CP" (commandpost), "baltrovitz advance", "baltrovitz follow" and "gopher" (unknown what gopher is, I may have heard an agent's name wrong), "canine" (bomb dog), other assorted agents generally IDed by last name, usage was repeater prior to arrival and to communicate with the CP. "talkaround" (simplex) was used close to arrival. The spelling of "baltrovitz" is a guess. I have heard "pa-chacky" used by DSS for Nelson Mandela before.
407.2 [151.4] input to 409.625 repeater
407.6 [151.4] "secondary" (simplex), ops upon arrival at location by agents, also used by vehicles at immediate arrival/departure.

I also monitored the accompanying HPD detail on 460.4 repeater with 20xx units and other special ops units.

-Eric

Topic: 97 Message: 97

Looks like the fun never stops.
Regarding the Phillips plant incident, so far I've heard lots of activity on the Channel Industries Mutual Aid (CIMA) freqs:
488.0875
489.0875

Heard some Harris County fire marshal activity on scene at Phillips on the Harris County trunk system group 6512.
Also heard activity of unknown origin and content on the Harris County Emergency Management group 8336 on the HCSO system.
I haven't checked FCC records to look for Phillips comms yet. Since the incident happened while I was at work and is pretty much over, I'm not going to try too much to find them. If anyone else has any good freqs or talkgroups, pass them along.

101. good band opening

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-03-28 04:59:19 UTC
From: Myles Barkman
Topic: 101 Message: 101

Got warm today and now there's a decent band opening. Too bad I can't stay up and play though. I did however catch some rather strange comms on 158.445 MHz. At first I thought my PRO-2004 was getting some strange mixing or intermod. But I listened on my dual-band mobile rig and heard it just fine. I put that freq in the scanner because it may reveal some oil spill comms some day. But the stuff I heard tonight was probably not related to any oil spill cleanup efforts. I've heard some pretty strange stuff in my days but the audio scrambling technique these guys were using was none I've ever heard before. Best it comes close to is something I've heard on a Marine VHF field radio with scrambling. The audio kind of "warbles" when they talk. Imagine what you've heard on cartoons when someone tries to talk underwater. Sounds more sophisticated than your plain old inversion technique. If anyone gets this while the band is still open, give it a listen and see what you think. Perhaps the band will open again tomorrow night and they will be on again. I detected no PL and they appeared to be operating simplex.

103. Skywarn Frequencies

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-03-29 03:57:52 UTC
From: Joshua Carroll
Topic: 103 Message: 103

Are there any skywarn/severe weather frequencies for areas outside of Harris County? I know 146.640 is Clear Lake and 146.840 is Downtown Houston. How about the surrounding counties.. or heck anything in South Texas from College Station to San Antonio (I-45, I-35, and I-10 counties also) like if I were to travel these counties and there is no NOAA Wx radio coverage. There are times I scan the Wx Radio band and get nothing..

Thanks for any help...

105. High/Intermediate School Frequencies

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-03-29 16:32:57 UTC
From: Joshua Carroll
Topic: 105 Message: 105

Looking for the following school frequencies if possible:

Clear Lake Intermediate School
Clear Lake High School
Clear Creek High School
Seabrook Intermediate School
Dickinson High School
La Porte High School
Pasadena High School
South Houston High School
Bay Elementery School (Seabrook)

I hopefully wont hear anything like this, but I would like to hear if
and god forbid when something bad happens at any of these schools
(especially the Clear Lake High and the Seabrook Intermediate, I have
brothers that go there).

Also if they are simplex or on repeaters.
(They're probably simplex but it's possible they can be repeated)
Thanks
Please respond to this group so other who might be requesting/looking
for this info can see it to :o)

106. Enron freqs

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-03-30 04:51:41 UTC
From: Myles Barkman
Topic: 106 Message: 106

For anyone going to Enron Field or close to downtown Houston, these seem to be some of the main freqs to listen to:

Licensed to Houston McLane Company Inc. (Houston Astros Baseball Club)
451.525
451.700
452.250
452.400
452.750
462.375
These are all licensed as repeaters however they may use simplex on the outputs.

Licensed to Aramark Corporation (at Enron)
451.975
461.925
462.175
463.575
463.850
Also all repeaters but simplex capable.
Might also check any Aramark freqs licensed for use in Astrodome.

These look like short range so you probably have to be pretty close to hear these.

Anyone going out there with their scanner, tell us what you find.

Monitoring the new field at 1pm today, I heard traffic on all of the ARAMARK frequencies, and I was unable to tell who was what as all were setting up, getting money bags, hanging signs, making sure everyone was in their proper uniforms, etc., all on the repeater side of the pairs. The breakdown could be by seating area, catagory of establishment (Sheriff Blaylock's Mexican food establishments, Coffee shops, ethnic foods (which includes Texas-Style Barbecue, I'm sure), etc.) or any other, unknown as yet, assignments.

As for the McLane frequencies, 451.700 was heard by those brave souls protecting the "Diamond Parking" area from interlopers, and 462.375, which appears to be a general catagory frequency, but much engineer related communications. Was unable to determine if this was strictly plumbing, electrical, etc, or if it also included the train in left field (no pun intended).

Too far away to hear the stadium, but HPD is using Citywide, 460.425 MHz , and Metro Busses are on 863.8375 MHz. Have not heard any transmissions directly related, yet, on City of Houston or Harris County trunked.

Most of the Clear Creek ISD uses VHF itenerate channels if they use
anything at all. The Galveston County Sherriff's have liason
officers at every Clear Creek school even if they are in Harris
County. Check the Galveston County system for these talkgroups.

HISD is licensed for 42 frequencies under the callsign WNZN688. Two of these frequencies are 469.0375 and 467.0625 (469.0875 is not). You can get the full list by callsign at
http://gullfoss.fcc.gov:8080/cgi-bin/ws.exe/beta/genmen/index.hts
I was unable to find another license for 469.0875, but there is no guarantee they are using licensed frequencies.

From: Myles Barkman
Topic: 118 Message: 118

I gathered all this info during my lunch break yesterday before the first game.

Looks like all repeaters utilize DPL, and none of the codes are the same for any repeater. Maybe their trying to reduce mixing into their repeaters with all of them being in close proximity or maybe even using a combiner.

McLane (Astros)
DPL repeater freq Use
025 451.525 heard talk of "wardrobe"
654 451.700
452.250 (not heard yet)
452.400 (not heard yet)
546 452.750 Parking?
162 462.375

Someone asked what Aramark is. To my knowledge, they take care of concessions and gift shops. Not sure if janitorial would be on Aramark or McLane repeaters.

Aramark
DPL repeater freq Use
365 451.975 food
155 461.925 (freq also used by tugs(?))
134 462.175 electrical
463.575 (not heard yet)
411 463.850 gifts

Range on the repeaters is low. If you are within loop 610, you can probably hear them OK depending on your antennas.

119. Harris County Maps online

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-04-02 01:28:32 UTC
From: Myles Barkman
Topic: 119 Message: 119

Someone asked about what Constables's precinct they were in. There are some maps online that may help figure out Sheriff's office and Constable's office boundary questions. They aren't the best resolution but the price is right.

Harris County Sheriff's office patrol districts:
http://www.co.harris.tx.us/so/patrol.htm

Harris County Constable Precinct 5 points of interest:
http://www.co.harris.tx.us/pct5/printmap.htm

Commissioner precinct 1:
http://www.co.harris.tx.us/comm_lee/Parks.htm

So far, that's all I can find. There is a nice color map available that clearly shows commissioner lines and constable lines. I got one at the Transtar building. I don't know where else you can get them. As for the person around Jersey Village, if you are north of 290, it is Pct 4, south-Pct 5.

Hope this helps.

Topic: 121 Message: 121

Anyone know which HCSO site that 856.2125 is being used at?
It's strong enough at my location to possibly be from downtown but I thought it was part of the Huffman site. Anyone running trunker know for sure? It will be nice when the 780 comes out and we won't have to care about such things. Just have to know if you have all the possible control channels programmed. Has anyone noticed any freq changes between sites lately? I haven't been doing a whole lot of HCSO homework lately.

Also, anyone happen to know what talkgroups Houston EOC uses on the city of Houston trunk system? I'm going to be working on the city's trunk during my lunch breaks for awhile. Does anyone know if they conduct a weekly or otherwise regular radio check net?

I've seen the EOC listed as TG 32944 but haven't verified this myself. Below is my log of activity from the Houston trunk, including a few notes I've picked up from other Web sites (they are listed with a question mark unless I've verified them). If anyone has info to add, please share with the list (or point us to relevant Web sites). I've also listed the unit IDs I've heard on the various talkgroups (e.g., 11xx).

123. Pasadena alert sirens

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-04-05 04:19:11 UTC
From: Myles Barkman
Topic: 123 Message: 123

For those who don't know, the city of Pasadena has about 17 voice-capable sirens spread across the city to alert the public about various conditions to beware of, such as severe weather, chemical plant incidents, fire, famine, whatever. Most alerts are done with pre-recorded messages that are selected at the EOC and each siren or groups of sirens can be turned on individually depending on the area(s) affected. The sirens are tested periodically. Once per month, all the sirens go through a voice test and police officers are sent out to report back on whether a particular siren functioned properly. Other tests are done in what is called a "silent test". Signals can be sent to a siren and the siren will send a signal back (perhaps after running an internal function test) to the EOC saying whether the siren is working (or should be working) properly. This is what the city was talking about after the latest Phillips plant incident. The sirens that should have gone off around the plant must have worked when last voice-tested in March and they are claiming that they got successful ACKs back during the silent tests. There is some controversy over whether the sirens went off at all, despite other claims that the warnings were late regardless. With the city under pressure to put this question to rest, I'm sure they will really be checking them out this week. Sirens are voice-tested the first Thursday of the month at 6pm. Signals to the sirens (and acknoledgment back from the siren) are done on the Pasadena VHF fire frequency of 154.010 MHz. Police dispatchers will then do a sort of "roll call" to see what the status of the sirens was. This is done either on PD secondary TG 6608 or TAC-5 TG 6800 on the city of Pasadena trunk system. Think they use TAC-5.
By the way, the same type signals they use to test (and activate) the sirens can be heard on 155.265 MHz at times. I don't know if this is used by the city of Pasadena, for which they are also licensed, or another city nearby, perhaps to test their own sirens. If you know, pass it along.

About 95% of my listening is on the HC trunk on my BC 245. From what I heard last night, 856.2125 is not a data channel, as there were deputies talking on it. From where I live it was fairly strong, so it must be for the downtown site.

Could you please explain a little more about what you meant on the 780. I am interested in this new scanner and am trying to learn about its new features.

thanks,
Dave

Appears as though Bush Junior is/was in town today. I was coming home from work when my ham rig stopped it's memory scan on 158.730. This is used by the DPS Executive Security detail, who is sort of the state secret service for the Governor. A couple of guys were talking using PL 162.2 Hz. Also heard over the radio was some traffic on 460.400 MHz, the HPD Vice(?) freq. They were talking about Secret Service at Enron wanting a canine unit somewhere. I also heard talk about a departure from Ellington. So, I'm not sure what's going on but listen in on HPD, Secret Service, Enron field, and 158.730 MHz. Heck, look for some more stuff too.

Topic: 130 Message: 130

Answers are no and no. They might try and allocate some of the lower 800 channels for future expansion but no plans are in he works to trunk or move them to a different system. City of Houston system does have some HPD talkgroups, along with the Harris County System.

Mike

for those that are interested the METRO TRANSIT police use 15344 special
events channel for there ENRON BASEBALL area frequency as a primary along
with there standard groups for traffic and for buses for the area. for the
person that asked about the use of 856.2125 frequency it is the lead freq
for the Dickinson repeater for Houston 2318 talkgroup, as well as the lead
for another group in the group of 5 area repeaters. hope this helps out for
those that want to travel to the stadium, I just monitored that group for
info. enjoy SANDYJ

It appears there is a blimp over Enron Field for the game tonight, it was too far away for me to read the logo (maybe the Budweiser blimp). If anyone catches any frequencies associated with the Blimp, please send your findings to the list.

Eric,
The blimp you saw over Enron Field was most likely one of the Goodyear
blimps.
Several days ago one of the local TV stations had a live shot of it flying
over Houston & mentioned it was here for a baseball game. Sorry I did'nt get
to see the shots of the field through the open roof-maybe next time!

<< i have a couple of questions, is hpd ever gonna be on trunking on the Houston System or will they join Pasadena since they have a site in Houston, a note Pasadena Trunking the pasadena system can be heard a good 70 miles, and HPD can be heard about 90 miles outside of Houston.
>>

HPD actaully explored the possibility of trunking it's existing UHF channels about 2 years ago. They disregarded it for the time being. They have no intention of going to 800.

Harris county has recently been bugging them to combine the City trunked system (which has everythign except fire and police) and the County system, but this has been largely viewed as a tactic for the county to get some more 800 frequencies (which I would have to agree with). The city system is packed full during daytime hours, and almost vacant at night.

There is an RFP out there for a Harris County metro area combined radio system, possibly including a regional dispatch center. No word yet on the status of any bids or proposals on that though.

HPD dispatch is going to combine with HFD dispatch, and they will both be relocated to a new facility somewhere on the north side. The combining of the dispatch centers has managed to annoy both agencies, and nobody is really looking forward to it (none of the dispatchers, that is).

140. call priority

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-04-09 20:36:03 UTC
From: albertorea@webtv.net
Topic: 140 Message: 140

hi here is a list of the HPD codes such as code 1 code 2, etc

Priority one
Most serious is a Priority one call which get the quickest response,calls in this category include holdup alarms, life threatening situations, and serious crimes in progress."We like to get that call dispatched to a police officer on the street in less than a minute," according to Cpt. Glen Yorek.The officer has no more than four minutes to get to the emergency.No more than five is considered acceptable.The current average for a priority one call is 4.2 minutes.
Priority two
Priority two call involve serious situation, but one that are just over.Like a report that someone has robbed a store and made a getaway while the clerk was calling.Guidelines for priority two calls are dispatched within five minutes and a response time of no more than ten minutes max.
Priority Three
Includes non emergency calls and non life threatening situations Like maybe you got home from vacation and and you see that your house was burgled while you were gone.THese are supposed to be dispatched within ten minutes and an eighteen minute response time.
Priority Four
Priority four would be minor traffic accidents, loud music complaints, fireworks and such like. These are supposed to be dispatched within twelve minutes and an officer is suppose to respond within twenty-four minutes.

i got this from the houston chronicle and seems to be correct.

From: Mike Holland
Topic: 141 Message: 142

METRO Buses do not operate on the Harris County System. The use there own pourly designed Johnson Multi-Net II LTR System on 800. Myles has them posted on his list at http://www.clarc.org/~kg5ai . You can not trunk track them on a BC-245. You must use aan OptoCom or Pro-92 (heaven Forbid). The system does not operate like a Motorola or Ericcson system. It does not have a dedicated control channel. It does have home channels throughout the system and can be identified by a quick open carrier sound about once a second. They also use Raytheon Data heads in the buses for sending info to their dispatch at Transtar.

Hope that helps. You can listen to them though by parking your scanner on a home channel. which is the channel that a radio group is programmed/assigned to.

Myles is pretty much right except for the fact that Metro is using traditional LTR. The data is the onboard computer system metro has on their buses and also for the GPS data. Much like what you here on Yellow Cab channels. The Data is not part of the voice radio system. LTR uses low speed handshaking for fro channel assignments. A constant data channel would be high speed handshaking which is not of an LTR design. But Metro is using LTR.

145. Re: [HoustonScan] Metro bus freqs

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-04-10 03:07:11 UTC
From: Sly Kapchinski
Topic: 143 Message: 145

Supposedly there are "multinet II" type LTR systems that use a dedicated control channel that the pro-92 and similar type of LTR trunking programs will not track. While I've not came across such a beast where I'm at, people say if you come across one (the data channel) all you hear is a dead carrier. A sub-audible data stream is being transmitted. This info was kicked around a lot when the pro-92 first came out (on other reflectors).

From: Mike Holland
Topic: 147 Message: 147

E.F. Johnson developed the LTR protocol in the late 1970s to accommodate the expanding requirements of radio-based communications. Trunked radio pools available channels, allowing users automatic access to any free channel instead of waiting for a specific channel.

"Our engineers felt they could develop a five-channel system that would utilize all five channels and not have a dedicated control channel," explained Kent Rahn, director of communications for E.F. Johnson. "It is done with a sub-audible signal, a signal or tone that goes out from the radio to the bank of repeaters to find the open one. It significantly increases the number of users that can use the radio system."

E.F. Johnson's LTR systems incorporate digital control but retain the analog air interface. Conversations "channel hop" or shift from one channel to another, without disrupting the user's conversation. Repeaters stay connected only during transmission, compared to systems which hold a channel for the entire length of a conversation.

Digital coding establishes unique identification numbers for user privacy and workgroup identification. Up to 250 ID codes can be established on its LTR systems for privacy and one-on-one calling. Mobile data support is available as well.

In principle, the service capabilities approach those in all-digital integrated systems. From E.F. Johnson's perspective, digitally integrated services are great if the customer is willing to pay. "Cost is a big issue. The customer may not need all the bells and whistles in other systems," Rahn said.

Private and SMR systems for public safety, utility, government and business dispatch have built applications with E.F. Johnson's product line. Both the Clearchannel and Multi-Net LTR systems are in use in local, statewide and interstate communications systems.

All-digital is on the drawing board at E.F. Johnson, but its introduction will coincide with customers' needs. "Migration to digital is caused by the carrier's need for spectrum efficiency," explained Mark Allen, E.F. Johnson vice president, engineering. "But when you switch to a digital medium there's a host of services available to you that are not as readily available in analog systems."

"The lion's share of what we bring to users is very reliable and cost-effective services," added Steve Nichols, general manager, business development. "Yes, we do have other capabilities, but defined by customers and what they want to do."

148. HCSO data channels

Yahoo group: HoustonScan (1999 — 2002)

150. Harris County trunk system

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-04-12 03:31:03 UTC
From: Myles Barkman
Topic: 150 Message: 150

Found something when I was on lunch today. Seems like some freqs changed and I didn't know about it.

This applies to the downtown system.

Looks like 867.9125 and 868.2375 are not used by the downtown system any longer.

I found 867.5375 to be used now and 856.2125 is probably the other freq I found earlier to replace those two. So if you all have been missing little bits of comms, switch those old two out for the new ones.

As far as the question about using the control channels on a non-trunking scanner:
The control channels of a trunking system are only useful when programmed into a trunk-tracking scanner or into any receiver hooked into a PC utilizing some trunking software that can decode the data. When the Bearcat 780 XLT comes out, the control channels will be the only freqs neccessary to program for a particular system and we won't have to report that certain freqs have changed. When the radio shop programs commercial 2-way trunking radios for businesses or public safety, the only frequencies (channels) they need to program are the control channels.

151. Re: [HoustonScan] question

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-04-13 02:19:55 UTC
From: Oliver M. Black
Topic: 149 Message: 151

You could do that but all you would get is bits and pieces of different conversations. Actually you wouldn't want the control channel as it is just a stream of digital data. As users talk on a trunking system, they are constantly jumping around to different channels. The purpose of the control channel is to tell all the other users what channel to tune to for the different parts of the conversation. To the user, they don't know what frequency they are on, but they get a continuous conversation. The advantage to this is that if a channel is busy, the system automatically switches everyone to another unused channel. But it makes it difficult for a standard scanner to track. I hope this helps.

The Texas Department of Criminal Justice has quite a few freqs they use in different areas of Texas. Some are used at specific locations while other freqs are used for intercoordination either between base locations or so transports can talk to other facilities when they travel. I still haven't figured out exactly who uses what where and for what usage but these are the freqs they use:

153.755 Darrington Unit-Sandy Point
153.785 Retrieve Unit-Angelton
153.815 Jester Units-Richmond
153.905 systemwide
154.085 Huntsville
154.115
154.995 Huntsville
453.050 Texas City & Central State Farm (?) Sugar Land

Not all these freqs may be used in this area and I may not have the correct institutions listed above. Many of these are used in the Huntsville area (big surprise :)). I (gladly) haven't spent any time around these places to do any research on their freqs. There are some newly licensed freqs for the TDCJ on some APCO 25 strange-looking freqs. If anyone has any corrections, please post them to the group.

157. Harris County trunk system freqs

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-04-14 05:14:33 UTC
From: Myles Barkman
Topic: 157 Message: 157

Here's my list for the HCSO trunk from the downtown site:
856.2125, 856.4875, 856.7125
857.2125, 857.2375, 857.4875, 857.7125
858.2125, 858.2375, 858.7125
859.2125, 859.2375, 859.4625, 859.4875, 859.7125
860.2125, 860.2375, 860.4875, 860.7125
866.075, 866.425, 866.4625, 867.0625, 867.5375, 867.9375, 868.4875

A couple of people have reported 866.4625 as possibly being from the downtown site. I first heard this freq tonight but I can't tell which site it's coming from. I'm leaning towards the downtown site right now. You won't hear voice traffic on all these freqs all the time. The frequencies are prioritized so that certain freqs get used first and others are used on an as-needed basis. You will hear the repeater key up momentarily (almost like an LTR system) to let you know the frequency is standing by. I haven't figured out why the controller keys these frequencies up like this unless it is a "get ready to be used" kind of thing. Maybe a trunking guru can shed some light on this. So far, this makes 26 trunking frequencies out of a maximum 28 so there could be two more out there. Keep listening!

159. Re: [HoustonScan] Harris County trunk system freqs

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-04-14 19:02:10 UTC
From: Oliver M. Black
Topic: 157 Message: 159

If it is a Johnson LTR system, they don't use a dedicated control channel. As you have said it is subaudible signaling. So if no-one is talking, none of the remote units can be updated as to system status. So, a repeater will key up every few seconds to keep the remotes updated as to status of the system. The advantage of the Johnson system is they can use all the channels for trunking, and if one goes down, the remote radios will time-out waiting for the update and switch to another channel. The disadvantage is that they only support up to 256 trunkgroups per channel (as opposed to a Motorola system with kazillions). The Johnson Multinet II system is I believe their APCO compliant system that is compatible with APCO based systems. Funny thing is, the APCO is allegedly designed by law enforcement for a 'Standard' system so multiple manufacturers can make radios for them (for competition) but I don't know of any agencies that actually use it. Most end up locking themselves into a Motorola proprietary system... Go figure.

160. Galveston

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-04-14 22:56:51 UTC
From: Myles Barkman
Topic: 102 Message: 160

Time to set attention on the Galveston County system this weekend. The Kappa Beach party is already getting underway. Might not be quite like Mardi Gras but from what I've heard, it should be interesting listening. Interviews with residents makes it sound like they are preparing for a hurricane-either getting ready to stay inside all weekend or get out of Galveston altogether.

Unrelated is a bike race to benefit MS this weekend. Route goes from Houston to San Antonio. Believe hams are helping out with communications but that's where my knowledge of it ends. Does anyone know what freqs will be used and what agencies may be involved?

Copied 146.720, which seems to be race primary and 146.880, which seems to be the medical net. The frequency 146.120 seems to be a direct frequency as I have heard one-sided bike related traffic here in west Harris County without a squelch tail. I have also heard reference to a channel list using channel numbers. Without the list, one needs to search, but these probably include both direct frequencies as well as repeaters along the way.

Oh yeah! It is funnnnn here. Started listening yesterday... The stabbings started yesterday at 2:00. First it was one, then two... Gotta luv it! The PD started towing cars this morning at 9:00. Apparently the 'tourists' started throwing the No-Parking signs over the seawall so they are going to tow the cars anyways. Well I am heading to Houston to the Filmfest... All the traffic is headed in-bound so I think I can make it out ok. Probably end up getting a hotel in Houston tonite. I don't think I'll make it back...

Ya'll have a great weekend...

163. Galveston party(?)

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-04-15 17:04:25 UTC
From: Myles Barkman
Topic: 163 Message: 163

Things are really hopping down in Galveston.
Catch most of the action on the Galveston County trunk.
Here's some of the more popular talkgroups:

50960 * Galveston County SO Beach Patrol 1
50992 * Galveston County SO Beach Patrol 2
51472 * City of Galveston EMS (dispatch on 51479) (hear dispatcher on
155.115 MHz)
51504 * City of Galveston EMS? (51511)
52208 * City of Galveston PD - 1
52240 * City of Galveston PD - 2
52272 * City of Galveston PD - 3
52304 * City of Galveston PD - 4
55472 * Texas DPS
55984 * Galveston County - Event A
56016 * Galveston County - Event B
56048 * Galveston County - Event C
56080 * Galveston County - Event D
56112 * Galveston County - Event E
56144 ? Galveston County - Event F
56176 * Galveston County - Public
56208 Galveston County - Event G
56240 * Galveston County - Event H
56272 * Galveston County - Event I

Other freqs with action are:
153.845 Galveston streets
453.200 Galveston trolleys
460.200 Galveston traffic

151.115 was used at Mardi Gras but haven't heard anything for this event.

Hey is anyone listening to the Galveston County Trunking. It looks like
they have shifted the Galveston County Special Events designations down one.
On Miles' list, EMS is now Special Events A,A is B, B is C, etc...
All other channels are the same...

It needs to be an STX 821. A Type I STX will not accept a couple of Frequencies due to the fact that they outside of the origional FCC Freq numbering scheme.

173. illegal comms?

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-04-18 23:22:44 UTC
From: Myles Barkman
Topic: 173 Message: 173

Coming home today, I heard a couple chatting back and forth on a simplex frequency. Sounded like they were driving next to one another and near the downtown area. This wouldn't have been so strange if it were on the ham bands and they used call signs. But it was on 465.400 MHz, the input to the Houston PD Vice repeater. They weren't using 123.0 PL so they weren't coming through the repeater. At first, I thought I had hit on some super-secret frequency used by PD-using a different PL than the repeater on the input. "No one would be listening for us here!" But the limited duration of the comms I heard didn't sound like police activity at all. I'm thinking bootleg operation here-and on a police frequency! Might give this a listen to and see if it happens on a regular basis.

174. Galveston County trunk system

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-04-18 23:53:17 UTC
From: Myles Barkman
Topic: 174 Message: 174

Speaking of the GCSO trunk, was doing more-than-usual listening this past weekend. Yes, I did notice that the "Special Event" identifiers didn't quite match my list. Either someone reported them incorrectly to me or they changed. In either case, I corrected my list and uploaded it to my web page along with a few other changes. So don't know if there is still a "countywide EMS" group since that was obviously "Event A".

Some other things I noticed about the trunk system while listening to the frequencies in conventional mode. Only a few of the frequencies were supporting voice activity. Don't know if others would activate as capacity warranted or not. Before I noticed repeaters being rotated through evenly. Also noticed certain repeaters were being used for the private calls. For those of you who may not know, private call is a mode used on some trunked systems where a unit can contact another unit "privately" without others on the trunk system hearing. It is only unit-to-unit and if you are listening on a trunk-tracker in trunking mode, you won't hear them. You can only hear private calls in conventional mode (not so private now, is it?). Also, certain freq were being used for DVP, or digital voice protection. This is the "secure" mode of encrypting the audio so no one but "authorized" people can monitor them. Special departments like CID or other sensitive departments use this. I noticed the same thing on the College Station trunk, that certain repeaters were utilized for the encrypted traffic.

Interesting the things you find out when you listen "behind the scenes". Don't get stuck listening in trunk mode. You might miss some VERY interesting conversations with people using private call. The Pasadena trunk system also has private call. The Harris County does not have private call or encryption but they do have phone patch capability. This may be for certain agencies/people. You can't hear phone patches in trunk mode either. Phone patches occur only on certain frequencies also on the HCSO system.

From: bpckty1@webtv.net
Topic: 177 Message: 177

Myles, you could have been listening to a harmonic of a ham or business frequency, or, you were actually listening to a new "back channel". At the Wings Over Houston in 1998 I copied the HPD, Airport Division, using 458.900 as their frequency at Ellington Field. And, last year during an event that involved former President Bush, there was talk by HPD Special Ops going to Special Ops Tac. I was near Memorial Park and was able to copy some scratchy communications, which were definitely NOT on the repeater, on 465.350. I was going away from the Galleria, so I was unable to make further confirmation. Unfortunately, I have been unable to gain access to a HPD radio with 465.350 as a Tac channel. But, knowing HPD, it seems that they will use any available frequency possible for Tacs.

178. Local Trunker info...

Katy, which area? PD, Harris County, Ft Bend County, or Waller County?

Katy PD is on the Harris County SmartZone system. Talkgroups are 9456 c1, and 9520, c2.
HCSD is 9008, D4. HCCO5 is 11504, D1. Ft Bend County is 2384 on the Ft Bend System.
Waller County is 155.760 Dispatch.

You can get the frequencies for the Harris County system at www.clarc.org/~kg5ai/
I hope this helps, and I put the correct url. I'm reading off some notes, but it should connect you to Myles Barkman's main page, and just follow the links

189. Fort Bend County Trunk System

Someone asked to other day about trunking info for Fort Bend County. Here is a list that I have programmed into my BC245. If anyone has anything to add, or clear up some of the questions, please do so.

2256 FBSO South Side Disp. (this is now all agencies that use the SO dispatch except for the SO units themselves)
2384 FBSO North Side Disp. (this is now ONLY FBSO units)
2480 FBSO Tac1
2352 FBSO Car-to-Car
3536 TX DPS (referred to as THP, used as a car-to-car for the DPS)
2896 Richmond PD Disp.
2928 Rosenberg PD Disp.
4176 Rosenberg PD Chan. 3
2690 Rosenberg PD Chan. 1
4144 Rosenberg PD Chan. 2
2992 Meadows PD
3088 Arcola PD
3600 Kendleton PD
2800 Sounds like someone's car-to-car
4880 Richmond PD Chan. 2
4208 Rosenberg PD CID
2864 FB EMS Dispatch
2861 FB EMS Dispatch
3696 FB EMS to Polly Ryan
3760 FB EMS to SL Meth.
3216 FB EMS Tac 2
3248 FB EMS Chan 3 ?
3286 FB EMS Chan 2
3728 FB EMS to FB Hosp.
4816 Richmond FD
4304 Rosenberg FD
4720 Flusher FD
3632 Pecan Grove FD
3984 Fresno FD ?
4400 Rosenberg FD Chan 4 ?
4336 Someone's FD (Richmond ?)
4784 Fire Mutual Aid
3504 Needville PD
2512 FBSO Tac 2
3408 Meadows PD Chan 3
3184 Juvenile
3024 Fire Marshall
2608 FBSO Admin.
3056 ?
5264 ?

2387 ?
3280 ?
3152 ?
7530 ?
5072 ?
4368 ?
45616 ?
3824 ?
45744 ?
2926 ?

Moto Type II system
866.0125, 866.3125, 866.5125, 866.7625, 867.0125, 867.2375, 867.5125, 867.7625, 868.0125, 868.2625, 868.5375, 868.8250,

Well that is what I have so far, maybe one of these days I'll get a data slicer and hook it up to the Pro-2005. Then start up "Trunker" and see what else I can come up with.

Has anyone heard any new activity in the 450 and 455 MHz media bands?

450.350 news crews heard out at Hobby covering crash
using simplex and PL 123.0
could be KTRH or KRIV?

450.6375 repeater used in conjuction with 450.9625
using pl 156.7

450.875 repeater with people downtown setting up video shots. Have one
helicopter flying around Wells Fargo building and people on ground near
park(?)
using PL 186.2

450.9625 IFB(?) used in conjuction with 450.6375 repeater
using PL 103.5

From: Myles Barkman
Topic: 193 Message: 193

Sounds like these could be network types covering a bike race. I can't find anything about this race. Sounds like some units are riding bikes themselves, some may be in cars, and there is also a helicopter. All freqs used are repeaters.

PL freq usage
114.8 450.0125 race stats/leaders
123.0 450.225 race stats/leaders
156.7 450.6375 photos
186.2 450.875 video
103.5 450.9625 fixed camera director?

Sounds like there may be several races/courses.

Now that it's all over, I found out what this bice race stuff was all about.
It was the BMC software grand prix.
More info is at this website:
http://www.bmcgrandprix.com/new/events_houston.cfm

All previously posted freqs are abandoned now and the folks who used them
will take their equipment with them to the next event and have to coordinate
what freqs they use according to the media freqs already in use in that
area.
This just shows that even though you think you found all the freqs used in
the area, some out-of-towners show up and it's a whole new ballgame. This
is the case with any major event including bike races, car races, olympics,
secret service, FEMA disasters, and any other major news event where major
news networks will be visiting.

More new stuff going on!
Head's up people in the central Houston area....

Looks like something new brewing as I and at least one other scannist has
founf the last few days.
Control channels have popped up on 856.7125 and 857.2375. Looks like
868.4875 is being used as a voice channel for this set of freqs. Signals
are weak and may be coming from downtown Houston area. Don't know if this
is something being tested at a radio shop or if this may become a new site.
I can't hear any of the freqs from my house but can hear weak from my work
on the south loop. If you can hear them, give them a try and see if we can
figure out where this is coming from and more importantly, WHY?

Anyone have a clue as to what this (new?) talkgroup is I've started hearing on the Houston trunk system?
6096
Thought I heard units going 10-15 (enroute to jail) so it appears to be law enforcement. In the HCSO system talkgroup list, this is listed as HCSO Academy staff. Thought that talkgroups were coordinated around here so that similar numbers would not exist between systems that could be potentially combined/linked.

197. aviation navigation

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-05-18 03:42:23 UTC
From: Myles Barkman
Topic: 197 Message: 197

I'm going to throw this question out to the aviation afficionados out there.
I don't have a whole lot of info on this but thought I'd see if anyone
might know what I was listening to.
The other day when the plane crashed at Hobby, I went by there on my way
home from work. I scanned around for any freqs that might be used by ground
crews and thought that since I was so close, might scan through the VOR band
as well. In addition to the known and published VOR and ILS localizer
freqs, I found something I never heard before.
On 111.600 MHz, I heard a steady carrier with an ID of "S" followed by
several short beeps. Sort of like a morse code error.
Is this some special type of navigation signal, something that was in test
mode, or something in emergency mode because of the crash with wreckage
still near the closed runway? I have not been back out there recently to
confirm that the signal is still there.
I was parked on the south end of the airport just east of the control
tower.

Myles,

I thought you might have picked up a test signal leaking out of an area avionics shop - there are quite a few in that area around Hobby (Braniff drive I think) - until I found this ...

For testing, "the frequency normally approved by the Federal Communications Commission is 108.0 MHz" - ie. this is the frequency most likely used by a radio shop at low power to test a VOR receiver.

Also, in digging around (http://www.aopa.org/) I found this regarding the testing of a VOR radio beacon transmitter ...

"During periods of maintenance, the facility may radiate a T-E-S-T code (_ . . . . _) or the code may be removed. "

Does the above resemble the morse code you heard? The frequency does appear to be down in the ILS/localizer portion of the nav band.

Regards,
Rick

Bingo! Finally found what I was looking for ...

Note that 111.6 is listed below as one of the official ILS frequency pairs...

The lower frequency provides horizontal information (ie. aircraft is left
or right of the optimum glide path) and the upper frequency provides
vertical information (aircraft is above or below the glide path).

I think the marker beacons are at 75.0 MHz ...

Frequency Pairs Allocated for ILS

Localizer MHz/Glide Slope
108.10/334.70
108.15/334.55
108.3/334.10
108.35/333.95
108.5/329.90
108.55/329.75
108.7/330.50
108.75/330.35
108.9/329.30
108.95/329.15
109.1/331.40
109.15/331.25
109.3/332.00
109.35/331.85
109.50/332.60
109.55/332.45
109.70/333.20
109.75/333.05
109.90/333.80
109.95/333.65
110.1/334.40
110.15/334.25
110.3/335.00
110.35/334.85
110.5/329.60
110.55/329.45
110.70/330.20
110.75/330.05
110.90/330.80
110.95/330.65
111.10/331.70
111.15/331.55
111.30/332.30

111.35/332.15
111.50/332.9
111.55/332.75
111.70/333.5
111.75/333.35
111.90/331.1
111.95/330.95

As usual, more than you wanted to know ...

Howdy,

ELTs are generally small battery powered devices. The electronics on one I disassembled was the size of a pocket pager. All the ones I've seen are crystal controlled and worked on either 121.5 or 243.0 MHz. There is one other newer ELT frequency which I do not recall at the moment.

Regards,
Rick

202. Pasadena Strawberry Festival Freqs

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-05-20 03:32:31 UTC
From: Myles Barkman
Topic: 202 Message: 202

Anyone going out to the Pasadena Strawberry Festival might tune into these freqs:
All use simplex with PL 156.7 Hz.
461.4375 Ch.1
461.5875 Ch.2
461.6625 Ch.3
461.6875 Ch.4?
461.1125 Ch.5

These might be used by private companies:
151.835
154.570
463.8375

These are some of the wireless mics found too:
169.445
169.505
170.245
171.905

Pasadena FD uses TG 7440 on their trunk system at the fairgrounds and the city uses 30768 for Convention Center Ops.

The rain seems to have had a negative effect with attendance tonight and the forecast does not look good for the rest of the weekend. If you go though, a couple of buildings are enclosed and you can still see some things like the largest strawberry shortcake (if they haven't eaten it all yet).

Date: 2000-05-22 03:16:31 UTC
From: Sly Kapchinski
Topic: 203 Message: 203

Hello list:

Anyone have freq. info for the Katy Mills Mall in Katy?
I was there recently and noticed a good amount of two-way in use (aside FRS stuff), including some stores/restaurants. Look like Katy police pulls security out there, noticed they run 800mhz radios and didn't have any lists with me or have the time or search for trunk freqs. Did noticed radios in use by the Bass Pro shop employees but couldn't find them(only had my vx5)
I think I found the freq for that "Rain Forest restaurant, its 464.975 simplex, dpl of 073.
Thanks Sly

210. Alvin system freqs

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-05-29 05:26:19 UTC
From: Myles Barkman
Topic: 210 Message: 210

A friend of mine came over today with Trunker and helped me find a freq that was used on the Alvin system I didn't know about. 866.9375 had been listed under the Huffman site but is now used on the Alvin system. This is the complete list of freqs known to be used for the Alvin system:

866.9375
867.6625 secondary control channel
867.750
867.900
868.0875 primary control channel
868.375
868.600 overflow
868.750 overflow

Have not had time to really listen this morning, but mine seems to be working fine. I have not noticed missing any transmissions (say as a conversation switches channels). Here are the freq. that I have put in.
866.0125, 866.3125, 866.7625, 867.2375, 867.7625, 868.2625 (currently the control channel), 868.5375, 868.8250, 866.5125, 867.0125, 867.5125, 868.0125
I'm pretty sure I have more freq. put in than that are needed, but hey it works for me.

hope this helps
Kevin R.
ps. I'd be interested in comparing scan lists if you would like to.

From: bpckty1@webtv.net
Topic: 218 Message: 218

Met with a Waller County Deputy today, I won't say why, and I asked him why their transmissions on SO Primary, 155.760, are rare. Normally, the only traffic heard is Fire and EMS calls. He reached down to his belt and produced the dreaded N object.

Yes, folks, Nextel.

So, beware as you travel to Austin, Bryan-College Station, Waco, or the mega car mall in Hempstead. Unless it is DPS or a smaller agency, you won't hear them if they are nearby.

I killed my contract with Nextel for my agency, because I do some business in The Highlands, and several other places in the out lying areas of Houston. I cannot hear the callers while on the Ambulance, even while in Houston, using Nextel, and lost thousands of dollars in Ambulance transfer calls due to the poor quality of thier service. I DO NOT suggest ANYONE to use Nextel Service, ESPECIALLY a County Law Enforcement Agency. The word "Nextel" is profanity, around here!! :)

Hearling several new (probably temporary) talkgroups on the Pasadena trunk system in downtown Houston:

31568
31600
31632
31664
31696
31728
31760

Heard someone just awhile ago announce on several groups for people to turn in their radios to Motorola in room 204. Talk of exhibit halls and bands. Someone mentioned that media was going to be broadcasting from there on their morning show.

What's the poop on this?

Also, it's been noted that 450.350 appears to be used as a possible IFB channel for KLOL. Perhaps KTRH will use 450.050 all the time and KLOL will use 450.350 all the time.

Dropped into Garden Ridge Saturday night during their 60-hour sale and found them on 467.8125. It helped when power in the building went out for a few minutes and there was increased radio usage. (I didn't do it.)

Watch for new repeaters at Baybrook Mall on 463.250 and 464.100. Usage unknown.

Anyone catch any comms for Harris County Medical Examiners now that they are in the business of "body removal" instead of Santana?

226. Portable ac/dc power pack on clearance at Wal-mart

Yahoo group: HoustonScan (1999 — 2002)

Hi All:

I don't know if all Wal-mart's will have this item but you might check.

Anyway my local Wal-mart has a portable ac/dc power pack on clearance. Reg price is $200 clearance at $75. Needless to say I picked one up. Unit is made by Century, it is called the "Electri Pac" and the model # is BPIP-99

This unit is great for emergency/portable power for ham rigs/HT's/ scanners etc.

The unit looks similiar to the portable 12 volt pack units we may have all seen at various automotive stores/ section. However this supplies 12 volts dc AND has a built in 300 watt power inverter for a/c power. You can use both at same time too.
It has two 110 ac volt outlets, one 12 dc volt cigarette plug. Has a LED battery meter checker which is used for checking battery power left and for charging status and a power switch for the inverter.
The unit is completely self contained and portable, with exception of wall wart charger/ dc charge cord.
For power it has two 17 amp/hour sealed lead acid batteries inside. The unit can be charged with the supplied adapter (a 12 volt 2800mah wall wart) or with the supplied 12 volt cigarette lighter cord. Charge time is about 12 hours via the ac charger or 6 hours with the dc charger.
It is a fairly large and heavy unit, weighs 38lbs. Measurements are 15.5"H x 10"L x 7"D
It unit is not made for, nor does it have cables for jumping off your vehicle. Like some others.
DC output is limited to 20 amps and 2.7 amps (300watts) for AC power.
Manual claims it'll power a laptop computer (110vac .5amp) for 8hours, desktop w/monitor for 2 hours, a 3/8" drill (110vac 1.2 amp) for 3 hours, 13" tv for 7 hours OR for 12 volt dc items, a camcorder for 28 hours, cell phone for 80 hours, 12 volt refrigerator for 8 hours and so on.
If anyone has any questions on the unit or wants a picture of it, I can e-mail it to you (I don't have a web site to post to) let me know.

When I worked part time for Aldine Funeral Home, Airline, (1991) before it was sold, and before it came under new management and moved locations, Funeral homes "Shared" Medical Examiner and Hospital rotations. One night, we would be on call for body removal off of homicide, suicide, mva's, etc....the next night, removal of bodies from area hospitals. Most of course, taken to the M.E.'s office in the Med Center. Santana was only one of several funeral homes that shared these duties. I DID notice however, that a few years later, while watching the news, that Santana was the ONLY body removal service I would see. So there are two questions I have here...

1.) Did Santana somehow obtain an exclusive contract with the City, somewhere between the time I worked in the field and the present?

2.) Did HCME create their own "removal" squad, like L. A. California has?

Cougar!!

Seems that the Metro PD units working extra jobs/overtime associated with the freeway closures are on
their own talkgroup. Have not been able to find it but conversation with one of them Friday evening
allowed me to eavesdrop on his radio.
Someone with better scanner than I have might try to find it. Would be active only after about 6pm on
Friday's and during the weekends when the traffic is being rerouted.

Topic: 237 Message: 237

Sorry for being slightly off topic but I think it relates to the hobby

Checked battery milliamp specs between Duracell and Energizer batteries
and here's what I found: Taken form the manufactures webites.

Energizer Duracell
AA-2850mah AA-2850mah
AAA-1150mah AAA-1150mah
9volt-595mah 9volt-580mah
C-8350mah C-7800mah
D-18000mah D-15000mah

AA's and AAA' are the same but there is a difference between the
9V's,C's and D's!

If you wish to see one in your store anytime soon you should ask the manager of that store to order one. RadioShack is not shipping the PRO-2067 scanners. Only stores that order them will get them. RS is trying to reduce stocks of the PRO-2066 before force shipping the radios to stores.

Ok I see, I have already asked the manager to order one but we are still waiting..... I have read on some bulletin boards/list serve that some stores in other parts of the country have already started to get them in so I guess these were stores that specifically ordered them.
My manager was kinda ticked that they have already been avail thru 1-800-the-shack for the last 1.5 to 2 weeks.

241. Wal-mart power pack update/smaller version at Sam's

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-06-18 03:22:50 UTC
From: Sly Kapchinski
Topic: 241 Message: 241

Hi all:

Just an update about the response on the portable ac/dc power pack on clearance at Wal-mart. Seems that the fact that my store is selling them for clearance for $75 is somewaht pot-luck. Most people have informed that they were selling at their stores for $159. There may be some out there getting them for the same $75 but no one has let me known for sure.I found mine near the hardware section, others said they found it near the trashcans another near the outdoor patio furniture. so looks like it might be anywhere in the store.

As an alternative, some one alerted me to a similiar device at Sam's Club. I went by there today to check as I did not see it a couple weeks ago but could've missed it.
Basically it is a smaller version of what I posted earlier that sell for $99 (not bad).
It has all similiar features including the 300wt inverter but only has 1-18 amphour battery for juice. While this other one (at Wal-mart) has 2-17 amphour bats. So I guess it would be a trade off--a smaller lighter weight pkg but won't last as long.
So those of you that can't find find the good deal as I did, the Sam's option is your next best bet.
Lastly- The unit at Sam's is called a "Statpower Portawattz" item #375617

From: ems.cougar@juno.com
Topic: 243 Message: 243

Hey....did anyone here happen to hear the call drop with Harris County Sheriff's Dept, about that drowning in the San Jacinto River yesterday evening? We passed by it, in our Ambulance, on the way to Battleground speedway, and I called a friend who said the call was dispatched as a 4 year old girl drowning. This morning's 6a news said it was the mother of a much older girl.

Just curious if anyone knew exactly how the call was dropped.

Cougar!!

244. Community Fire Department Trunk Codes

Yahoo group: HoustonScan (1999 — 2002)

Topic: 244 Message: 244

Can anyone give me the Community Fire Department trunk codes? I know they use something called MA1 and TAC1....

Thanks in advance,
Brian

245. Some area freqs

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-06-18 20:30:52 UTC
From: Myles Barkman
Topic: 245 Message: 245

Did some research yesterday and found out some stuff.

Found no PL for Garden Ridge on 467.8125 (I-45 and Nasa Rd.1).

Have a new A&W restaurant built into a Texaco at Genoa Red Bluff and Beltway 8 in Pasadena using 469.0125 for Drive Thru. PL is 146.2 with employee on 131.8.

Sounds like a possible drive thru in the League City area using 469.2125 and 77.0 PL.

It was reported that the AMC 30 Theater at I-45 and the Beltway uses 463.7125 MHz. This is not true BUT...if you are close to them, you will hear them on that freq. The actual freqs in use are 151.955 and 154.570 with PL of 71.9 Hz. Guess what happens if you multiply 154.570 times 3.....you get 463.71. Pretty close to 463.7125. I wondered why I didn't hear anything on there on a busy Saturday in the parking lot.

247. New list format for Houston List

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-06-19 03:04:37 UTC
From: Myles Barkman
Topic: 247 Message: 247

Been doing the painstaking task of adding an alphabetized listing to the Houston area scanner list so it will be easier to find the things you want to listen to. I don't use spreadsheets or any kind of database program for my lists (yet) so I had to do everything manually. I'll probably be doing some tweaking to it so things fit in nicer categories. Let me know what you think and if there is anything that I might have forgotten. The list is twice as big as it used to be so please help me get rid of any false or obsolete info.

Re: Brian Martin's request, the known talkgroups for the Community (Alief and Mission Bend) Fire Department are:

Dispatch 1 11856
Dispatch 2 11888
Tac 1 11920
Tac 2 11952

These and many more are available by clicking on the URL at the top of the page, and www.clarc.org/~kg5ai, I hope I got it right. Myles currently has the best, published, lists for the area. Of course, I think mine are better, but, since I haven't published mine.... Myles wins by default. There are others out there, most notably Haskell Moore's http://idt.net/~kb52ix, Lindsey Blanton's, www.lcblanton.com/trunked/tx, and Warren Whitby's, http://home.att.net/~wwhitby/tx.htm.
But, for the local stuff, especially for the frequencies that cover the entire scanning spectrum, Myles does have the most complete compilation.
And, no, I do not work for Myles, he does not pay me, and, in fact, we have never met, except via e-mail.

Topic: 250 Message: 250

Awwww, thanks Ben.

I nearly shorted out my keyboard with my tears of joy. :)

No, Ben is not being compensated by me. We have a two-way avenue of information flow. I don't sell my lists, although years ago, I gave it some consideration. But then you have to deal with things like business transactions, advertising, credibility and responsibility of the information, and then the ugly side of watching for copyright infringement. Why deal with all that? It is supposed to be a hobby and to me it is a labor of love (and I stress LABOR). It really does take some time to go through this stuff and weed out the crap and verify new stuff.
There are some people who wish to sell their information but I would just rather take donations/contributions/table scraps (hah!). I think the lists are better left in the public domain. Leave the commercialism with the guys selling old lists at the Nascar races. Heck, even the ARRL sells their repeater book. Why not send them to every amateur radio operator like the phone company sends their books to everyone with a phone? It's because the phone company can make money off you using your phone.

Most of all, I just like the challenge of finding frequencies that other people might not know about and figuring out who is using them. Sometimes, I even like listening to what's being said on them.

And Ben, if you'd like me to put your list up on my page, you have an open invitation. And I won't even charge you! :)

From: Rick Parrish
Topic: 258 Message: 258

Howdy,

I tried to pick up the USSS during the president's
visit yesterday but all I got was some useless data bursts
on 167.025 - no voice. I'm not hearing any data bursts
today so I'm fairly certain it was USSS related.

Did anyone overhear anything "presidential" related and
if so on what frequencies?

Regards,
Rick

Topic: 258 Message: 260

Sorry, the only USSS heard was Charlie, 165.375, encrypted, as well as the pager listed earlier.

The only way around here to hear anything when the Prez comes to block our gridlocked traffic is to monitor HPD Citywide, 460.425, CID, 460.400, and sometimes Special Ops, 460.350 and Detective, 460.450.

The news media is sometimes helpful, but they usually are "at the spots" for security reasons, and most communications are via cell phones.
But, FYI:
KPRC, Channel 2 450.2875/450.0875
KHOU, Channel 11 450.5125/450.6125, usually encrypted
KTRK, Channel 13 161.700/450.8625
Metro Video 450.4875
Metro Traffic 450.7125

Hope this helps.

PS, anyone have the frequencies for the KRIV, Channel 26, reporters? I heard they were 900 MHz trunked, but, I cannot find the information. I spoke with an engineer at a Live Report (Star Wars, Prequil 1) at the Cinemark Katy, but he was evasive and indicated they used cell phones. But, that did not answer the questions of the various antennae on the roof of the van and the handheld, Motorola, 800-900 type, between the seats.

Sorry, the only USSS heard was Charlie, 165.375, encrypted, as well as the pager listed earlier.

The only way around here to hear anything when the Prez comes to block our gridlocked traffic is to monitor HPD Citywide, 460.425, CID, 460.400, and sometimes Special Ops, 460.350 and Detective, 460.450.

The news media is sometimes helpful, but they usually are "at the spots" for security reasons, and most communications are via cell phones.
But, FYI:
KPRC, Channel 2 450.2875/450.0875
KHOU, Channel 11 450.5125/450.6125, usually encrypted
KTRK, Channel 13 161.700/450.8625
Metro Video 450.4875
Metro Traffic 450.7125

Hope this helps.

PS, anyone have the frequencies for the KRIV, Channel 26, reporters? I heard they were 900 MHz trunked, but, I cannot find the information. I spoke with an engineer at a Live Report (Star Wars, Prequil 1) at the Cinemark Katy, but he was evasive and indicated they used cell phones. But, that did not answer the questions of the various antennae on the roof of the van and the handheld, Motorola, 800-900 type, between the seats.

For the latest information on Houston area communications see:

I may be mistaken, but those antenna that hang off of freeway overhead signs, and such...that look like an old afro comb, are (I assume) parts of a communications network. Instead of having towers, they are placed all along the freeways, to be able to pick up police officer's transmissions, and relay them to the sattelite which sends the signal back to the receiving radio. This is only a guess though.....I assume this system was installed, to avoid "Dead Spots" in case an officer is in trouble, and cannot contact dispatch.

I may be mistaken, but I believe the antenna you see on the freeway overpasses is for the real time traffic monitoring system in Houston. You can find more information at http://traffic.tamu.edu/avi-intro.html.

Those are part of the traffic system at transtar. These Antennas read the infomation of EZ tags and report freeway conditions and speeds back to Transtar

http://traffic.tamu.edu/cgi-bin/aviimg

So if you have an easy tag, your speed is averaged with anyone else on the road to get a fairly close estimate of highway speeds.

265. Metro / Transtar Traffic

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-06-22 22:33:38 UTC
From: Kevin R.
Topic: 265 Message: 265

I'm looking for freqs. everyone uses to monitor traffic conditions in Houston. I've checked Myles Barkman's list and another one. I pick-up transmissions between Base (whoever that is) and Transtar, reports that come from mobile units on ground as well as air and conditions that are on KRBE. If someone could just list the freqs they use and any information on how the whole system works that would be great.

Thanks for the help
Kevin R.

Kewl.....always wondered what those were. What exactly is Transstar? I happen to own a company named Trans-Star EMS, but of course it is not the same as what ya'll are referring to....heck, we dont even use radios, just cell phones.

Topic: 268 Message: 271

Thanks for the update on Marti, but here is the list gleaned awhile back from a site that, probably, no longer exists, that was called Metro Traffic Radio Channel Plan. I know it seems strange to see VHF and UHF mixed, but with two programmable radios, they can be configured to show the channel numbers, even if the actual number of frequencies in the radios are more or less than the channels noted. They may also have other stations in them that they use, but these are the ones I hear on 450.7125 when the base says, "Go to channel xx."

Channel
1 450.5500(R) (now one hears First Baptist Church, Houston, Remote Broadcast)
2 450.5500(S) Base
3 161.730 KKBQ
4 450.1125 KKBQ*
5 450.1125 KKBQ/KKRW*
* tone difference
6 455.2125 KKBQ 1 (CPT Eddie)
7 455.8825 KKBQ 2
8 450.1500 Seminar Rd
9 450.1875(R) KTBZ
10 450.3875(R) KIKK
11 450.3125(R) KRBE
12 450.2125(R) KMHX
13 450.4875(R) Shadow Traffic/Metro Video
14 450.7125(R) Metro Traffic
15 450.7125(S) Metro Traffic
16 455.6500 KRBE

I didn't include 455.6500 on the earlier posting since I have not heard any traffic on that frequency and didn't consider the 450.6500 since the stations don't always use the repeater pair. The only time I've seen this is with KKRW.

Note 1: on 450.1125, when KKRW uses it, it is a double simplex, no repeater used. This was verified at a Dean and Rogg remote. The feed from the van to the station was on 455.2500 NBFM.
Note 2: on 455.8250, KPRC, TV2, listen for the IFB. There is an open mike w/ the local broadcast. You have to be close to the station, or use a beam antenna to hear it.

Date: 2000-06-23 22:54:42 UTC
From: Myles Barkman
Topic: 15 Message: 273

As lifeflight is landing somewhere over here in Pasadena right now, I'm wondering if anyone has figured out how to decipher the index numbers they use, i.e. Kilo-four, Hotel-three, etc. It could be the number of people on-board (although I doubt there would be four folks on that thing), maybe the fuel status, perhaps the nature of the incident.

Also, does anyone have the coordinates of the helipad that they use at Hermann? Sometimes they reference their location by azimuth, elevation and range from the hospital but I can't find info on the helipad in any database. I've seen reference to some Lifeflight helipad around Galena Park. Is this used for refueling?

Try these ...

http://www.flightdata.com/cgi-bin/airports/airports.exe?IDENT=

In the URL above, append any one of the following ...

4TS4 - JETERA
TE11 - LIFE FLIGHT/REFUEL LOCATION
27T - MEDICAL CENTER
20TA - LIFE FLIGHT
9TX0 - HOUSTON POLICE COMMAND STATION
72TX - JOHNSON SPACE CENTER
29TS - WEST HOUSTON MEDICAL CENTER
64TS - ST LUKE'S EPISCOPAL HOSPITAL

Example - to view the info for the Medical Center helipad, use ...

http://www.flightdata.com/cgi-bin/airports/airports.exe?IDENT=27T

To see a list of all for Houston, try ...

http://www.flightdata.com/cgi-bin/airports/airports.exe

North Base is Hooks. South base is the fuel stop on the south side. If they say hotel or charlie it is Hot or Cold.....Rotors spinning or shot down. If you call them they can give you the location. I will try to get the info on Hermann's pad as whenever I go in to work.

From: bpckty1@webtv.net
Topic: 279 Message: 279

Didn't want to upset anyone. The information is not to transmit, but to allow those with scanners with pl/dpl capabilities to put them in the scanners. Some scanners, ie, Bearcats, overload in the RF soup here in Houston, and, if one has a scanner w/ tone capability, programming it in will help eliminate bleedover, pager tones, etc.

For example, several years ago, before tone boards were available, I spoke w/ a tech who outfitted the KHOU, Channel 11, news vehicles with Bearcat scanners (I forget the model, a base unit). He provided an inline switch on the antenna feed so the antenna could be "disconnected" when the radio was used inside the loop. (Guess where Channel 11 is. Yep, about a mile west of beautiful Downtown Houston.) Even so, the radios would still pick up HPD, HFD, when scanning any 450-490 MHz frequency, but not as strongly.

281. Fw: [IPN-Members] real bad prank

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-06-24 15:08:59 UTC
From: Peter Kirk
Topic: 281 Message: 281

Got this off of IPN Members..

Subject: FW: DANGEROUS PRANK
Importance: High

**********DANGEROUS PRANK:**********
Please read and forward to anyone you know who drives. My name is Captain Abraham Sands of the Jacksonville, Florida Police Department. I have been asked by state and local authorities to write this email in order to get the word out to car drivers of a very dangerous prank that is occurring in numerous states.Some person or persons have been affixing hypodermic needles to the underside of gas pump handles. These needles appear to be infected with HIV positive blood. In the Jacksonville area alone there have been 17 cases of people being stuck by these needles over the past five months. We have verified reports of at least 12 others in various states around the country. It is believed that these may be copycat incidents due to someone reading about the crimes or seeing them reported on the television. At his point no one has been arrested and catching the perpetrator(s) has become our top priority. Shockingly, of the 17 people who where stuck, eight have tested HIV positive and because of the nature of the disease, the others could test positive in a couple years. Evidently the consumers go to fill their car with gas, and when picking up the pump handle get stuck with the infected needle. IT IS IMPERATIVE TO CAREFULLY CHECK THE HANDLE of the gas pump each time you use one. LOOK AT EVERY SURFACE YOUR HAND MAY TOUCH, INCLUDING UNDER THE HANDLE. If you do find a needle affixed to one, immediately contact your local police department so they can collect the evidence. PLEASE HELP US BY MAINTAINING A VIGILANCE AND BY FORWARDING THIS EMAIL TO ANYONE YOU KNOW WHO DRIVES. THE MORE PEOPLE WHO KNOW OF THIS THE BETTER PROTECTED WE CAN ALL BE

Subject: HOAX!!!!!! Re: [IPN-Members] real bad prank

>From the files of the Urban Legends Reference Pages:

http://www.snopes.com/horrors/mayhem/gaspump.htm

Legend: Folks are getting stuck by HIV-loaded syringes affixed to gas pump handles.

Status: False.

Example: [Collected on the Internet, 2000]

<exact text of letter quoted below>

Origins: This hoax urging caution when pumping gas appeared on the Internet in early June 2000. In common with other AIDS-infected needle scares (syringe attacks in movies houses and dance clubs and contaminated needles in payphone coin returns), it plays upon our fear of contracting this dread disease through the pursuit of ordinary and harmless activities.

If there's an Abraham Sands with the Jacksonville Police Department, they're certainly keeping him under wraps. No newspaper stories from that city make mention of him, which is unusual (to say the least) about a department's spokesperson; Jacksonville is served by a sheriff's office, not a police department; a phone call to the Jacksonville Sheriff produces the response that they've never heard of Abraham Sands; and he's not listed with the rest of the personnel on the City of Jacksonville Sheriff's Office web site. No news stories out of Florida confirm the e-mail's claim that 17 people have so far been injured by these attacks, the City of Jacksonsville Sheriff's Office says the whole thing is a hoax, and the Centers for Disease Control in Atlanta maintain they are not aware of any cases where HIV has been transmitted by a needle-stick injury outside of a health care

setting.

This is naught but another darn fool hoax dreamed up by someone intent upon enjoying the sight of the Internet community thrown into another panic. Don't contribute to it by passing this humbug along.

Does anyone know what Baytown PD is transmitting on? They have 800Mhz antennas on their cars but they are not heard on the 800 freqs that are licensed to Baytown.

Also who is working on 154.800? Sounds like a PD near Pasadena..

286. baytown

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-06-25 04:10:50 UTC
From: Myles Barkman
Topic: 286 Message: 286

The city of Baytown (except for city services and animal control) has moved to the Harris County trunked radio system. Most if not all their traffic can be heard through the system located on the Fred Hartman Brigde site in Baytown:
866.100c,866.550,866.950,867.375,867.950,868.050c,
868.250,868.650,868.775,868.9375i

The agency you hear on 154.800 is Deer Park Police using 154.7925 MHz. They moved from 155.190 MHz.

From: Myles Barkman
Topic: 288 Message: 288

Had to do some web research on this one as I haven't been able to find them myself either-until tonight. There are many ANG freqs used for the jets out of Ellington but until now, hadn't heard any special freqs used by the helicopters. The consensus of several lists suggests some VHF low-band stuff including 41.000 MHz which is even officially listed for Ellington for ANG use. I've never heard it but don't park on it for very long either. Several lists show freqs in use in several states ranging from 241.0 MHz to 243.0 MHz. So I started searching through that range and caught some traffic on 242.4 MHz. Couldn't tell who was using it and they were sort of weak. They eventually got closer and closer until I could start hearing them both. It was a flight of two aircraft talking to one another. One mentioned "information Papa with altimeter 3000." I decided to tune to Ellington ATIS where, guess what, they were giving information Papa with 3000 altimeter. So I started listening to tower where I heard them coming around from the San Jacinto Monument-a flight of two guard helicopters. They came in and landed at Ellington.

So there you have it. Don't know if there's more but it's a start. BTW, I saw this specific freq mentioned in one of the lists as used in Houston for ANG helicopter use. It also mentioned freqs 41.000 MHz and 135.000 MHz.

The list was at http://www.interplaza.com/scandfw/dfwlist.txt

Hope this helps.

DANG!!!!! \:):) :)

Please let us know if it comes on again....and I will be watching for it too.

This last week my wife and I (who are both EMT-I students) got to do UTMB Autopsy Lab in Galveston, and LBJ Operating Room this morning (6-27). Unfortunatly, NONE of the surgeries required Endotracheal Intubation, so we wound up with not much to do, and went home. :(

We do have access to Warner, at a friends house,...and watch TLC and Discovery on a regular basis. Let us know if it comes on again, and on which channel!! :)

Cougar!!

291. Re: [HoustonScan] Army National Guard

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-06-27 23:13:24 UTC
From: Chris Parris
Topic: 291 Message: 291

I can confirm from many afternoons sitting at Ellington looking for frequencies that the Army Guard helicopters use 41.0 mHz, 135.0 mHz and 242.4 mhz most of the time they are operating. These three frequencies seem to be the ones monitored by the base operations and maintenance. I have heard them refer to them as TAC 1, TAC 2 and TAC 3. They don't seem too talkative when flying, so don't expect to hear too much on these except when they arrive or depart EFD. And, obviously, they use the UHF or VHF ATC frequencies in the Houston area depending on where they are flying around.

One interesting note is that I never heard any of the military helicopters come up on 123.075 mHz, which is a common VFR helicopter multicom frequency used by all the civilian helicopters flying around the Houston area...

From: Myles Barkman
Topic: 293 Message: 293

Thanks for the praise but I don't think I'm "all that."
Heck, I thought I really found something cool today when I went out to the truck at lunch and started scanning around. I was searching through the 460 MHz business band with my ham rig when something caught my attention on 467.6375 MHz. Sounded like aircraft traffic so I awaited more talk. Several transmissions with data burts at the beginning and aircraft doing surveillance. I'm wondering who/what this is. I thought it could be some new freq used by HPD so I tried 123.0 PL. That wasn't it. I listened with my 235 TT to the Pasadena system downtown to see if there was any DEA surveillance going on. Just heard what I believe to be radio techs talking. Then I tried HPD on their trunk system. Didn't hear anything. At the same time this was going on, I was wondering why I couldn't also hear this on my 235 on 467.6375 MHz. Made me start to wonder if what I was hearing was really on that freq. My ham rig (a Yaesu FT-90) is very good about image rejection and intermod rejection. Well, I decided to try searching the DEA band between 418 and 419 MHz with the 235. First came across some surveillance on 418.750 on the west side of town. Was not the same as the stuff I was hearing over Pasadena on the unknown 467 freq. Hit search again and hit 418.975 MHz. This was exactly what I was hearing on 467.6375. So no new freq to report, just a word of wisdom. Don't believe everything your scanner (or ham rig) tells you. I would have been very surprised to think that any law enforcement agency would use the FRS freqs for surveillance. That's like using CB radios-everyone has them.

If in doubt that what you are hearing is really on the freq showing on your display, try to back it up with a different type/brand receiver. Usually, different types of receivers won't translate images to the same frequency. If you may be very close to the action, try using either an attenuator or removing the antenna.

I'm glad I figured this whole thing out today before I got home and announced this new "bogus" discrete surveillance freq. Just have to scrutinize what you find with common sense and experience.

On the same token, if you search the military aircraft band and are near an airport, you might sometimes find "new" frequencies that really don't exist. At least once, I thought I found a new freq that happened to be the second harmonic of 126.050 MHz.

Excuse me now, have to check out a possible funnel cloud in Pasadena.

From: Myles Barkman
Topic: 294 Message: 294

I decided to program in the other two freqs mentioned (41.000 and 135.000 MHz) into my aviation band in the 2004. Moments after I did this, I heard tower say there was an Army helicopter in the area and then a few seconds later, I heard 41.000 MHz used for the first time. So there's two confirmed in two days. Still waiting to hear the other for myself-not that I don't believe Chris. BTW, Chris, have you really heard a base use these?

On an unrelated note, got an email that Yahoo is acquiring eGroups. Wonder if we will have yet another name change. I've had banks that did this. Read all about it (if you really care) at http://biz.yahoo.com/bw/000628/ca_yahoo.html

Hi, Myles and HoustonScan...

Yes, several times I was sitting at the NASA ramp while an army guard helicopter was getting ready to depart,
and actually heard some radio checks all all three frequencies with what sounded like both the base ops and
maintenance. However, I always noticed that the 41.0 mHz frequency was very weak from the base. That is, I
could hear the helo just fine, but the base was pretty weak, even from a short distance away. Plus, I even
heard the helicopters complain about the signal being weak on the 41.0 freq occassionally.

Chris

While we're on the subject of the army helicopters, don't forget to listen to 40.1 mHz and 230.1 mHz. Those are both active frequencies with the helicopters based at Conroe airport with the Conroe Maintenance Facility. There are quite a few Apaches and some Blackhawks that fly training missions out of Conroe, and there have been some interesting comms on these two frequencies. The base at Montgomery Co. airport is refered to as "CAM Ops". They seem to have an alternate UHF frequency, which I haven't found, and were doing some work using some frequency-hopping radios last year, but I never found what frequencies they were hopping on. I also never found a VHF air band frequency they might be using, other than 122.9 at CXO...

Hi, Dan...

Unless something has changed recently, don't belive there are any army guard helicopters based at DWH. The ones I have caught there are transients from Ft.Hood or other areas just stopping off during a training mission. There is an old sign up indicating an army medical helicopter unit was based at DWH at one time, and one hanger on the west side of the aiport still says US ARMY on it, but I have not seen any activity there in years. I assumed that facility was taken by the US Customs air suport branch at Hooks, since they use the other three hangers nearby...

I lived near Ellington from the mid 80s through the early 90s and can tell you that 41.0 has been in use at Ellington for many years.

Though I have not been in the area for five years, the freqs in common use when I left were:

41.000 - Command Post & Helos

135.000 - Helos

242.4 - Helos

At times visiting helos would use 242.7.

I've also been looking for anything on Martindale AAF for years. The only thing I've seen published is the good
old 123.075 mHz, but clearly they have some other radio antennas at the base. I never have been able to get
near the place when the helos were flying...

310. Fire at Katy HS

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-07-04 06:46:53 UTC
From: bpckty1@webtv.net
Topic: 310 Message: 310

While you were sleeping or at a pre-4th of July happening, there was a major fire at Katy High School. It seems that every fire department/ems in the Katy area. Fire departments heard or reported are Katy, West I-10, WestLake, Community (Alief/Mission Bend), Fulshear, Cy-Fair, Richmond and Rosenburg. There may have been more, but these are the only ones I have heard about. Also, the Katy ISD PD has been very busy along with the Katy PD and the Harris County Constable Precinct 5. I didn't monitor to see if the Harris County Sheriff's Department was involved, since the school is in Fort Bend County. I did not hear any Fort Bend County activity in the area, but I may have missed their communications. For some reason, Fort Bend was hard to hear tonight.

Frequencies/talkgroups heard:

151.115 Katy Fire Department
15728 West I-10 Fire Department ch 2,
Harris County System
4816 Unknown, possibly Richmond or Rosenburg Fire Department,
Fort Bend System
11856 Community FD, Harris County System
1136/1872 Katy ISD Police, HC System
9456/9520 Katy PD, HC System

As I write this at 1:30 AM, the FD is still at the school putting out hot spots. From the reports on the news reruns, especially Channel 2, it is a huge fire. Good thing school is out for now.

On a humorous note, Community FD was dispatched to an unknown object burning in the middle of Metro street. The chief arrived and, while stifling a laugh, reported that the burning object is a refrigerator.

Dang!! looks like I missed out on ALL the excitement. I had an Ambulance rotation for school, with Liberty EMS/FD. We only got ONE lousy call!! <pout> all night.

Guess I was just on the wrong side of the world!! hehehhe!! :)
It is SOOOOO quiet out there! I only heard two firecrackers go off all night long.

Anyhoo, speaking of Westlake....I'm headed out there later this morning to look at a 1992 Frazer Ambulance that they advertised for sale, in the Texas EMS magazine. I would like to get it and upgrade my company to Mobile Intensive Care Unit with BLS capability status with the State. I am soon to be in the market for a two way radio system as well. I want to go with a two-way and a dispatcher, rather than the cell phones we use now. Does any one suggest Motorola over some of the other brands of 2-way systems? I need some pros and cons before purchasing.

Cougar!!

P.S. I also am glad school was out at the time of this Katy HS fire. MCI's are not fun, especially in schools.

315. Help a Cougar

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-07-06 14:57:23 UTC
From: ems.cougar@juno.com
Topic: 315 Message: 315

Ya'll seem to be a group of people who know a whole heck of a lot ore than just scanners, but electronics in general. I have a situation I would like some comments on.

A few months ago, I was having BAD probs with the H/D on my puter, it was going downhill FAST. There were three programs that I had installed just before the probs started. I ran scan disk on a regular basis, virus scans with three different programs....NOTHING could be found wrong with the puter. Finally I started removing programs one at a time and running scan disk in between each one. At first nothing showed....until I removed the program that a Kodak CD picture disc had put on my H/D. After I removed it, scandisk took about 3 hours to complete, and the topigraphical "grid" on my H/D looked like a friggin spider web due to all of the "B's" that scandisk had marked as Bad Clusters.

I took the H/D back to the store because it was still under warranty. After a couple weeks of fighting, they finally replaced it with a brand new one that was a better quality, and about twice the capacity, because they could not come up with a NEW 3.2 gig H/D.

Now....I run a business, and I needed to get some flyers made at Kinko's. The pics that I needed were on one of those Kodak discs. I was afraid of the discs, but I had to get the pics off of them. I figured I would just put them in, go into DOS and pull the pics off without running Kodak's program. The first disc woked perfectly. The second disc started an auto install. I killed it as quickly as I could, but it was too late. I deleted every kodak file I could find on my H/D. IMMEDIATLY, this H/D started acting up. Doing the same things the old one did. I cant even run defrag without running scandisk first and it is getting worse.

Could a CD disc carry an undetectable virus? I am TOTALLY baffled by this. This is a brand new hard drive, and putting that damn Kodak disc in, started the downhill spiral of this one, just like it did the last one. This should not be happening. Everytime I run scandisk, it picks up new errors. Does anyone have any ideas? Bad thing is....the company I hold the warranty with.....is Chip Smart, and they packed up and fled town!! :(
Could it be SOMETHING on one of the Kodak Pictue CD discs that is killing hard drives????????????

Cougar!!

316. 800 mhz myth

Got this from the APCO, Texas Chapter. These are the people that coordinate freqs for Public Safety.

Move to 800 MHz?
Over the past year or so, Frequency Advisor - Ken Yoder - has been trying very diligently to quell the rumor that "ALL PUBLIC SAFETY AGENCIES MUST MOVE THEIR RADIO SYSTEMS TO 800 MHz
BY THE YEAR 2000".
This is not true!!!
The FCC has never said this is to be accomplished. This is a sales representative pipe dream.
You should, however, when looking at new equipment, require that the equipment be 12.5 kHz capable. Your next frequency assignment in VHF or UHF will be required to meet the new Refarming rules.

First thing to check is your BIOS setup. See if your computer can auto-detect hard drives. Wrong BIOS information can cause data corruption and other weird things. Then look in Windows device manager, under disk drives -- it should list something like 'Generic IDE disk type xx'. If you double click on it, you will get several check box options. See if DMA is checked, it it is, uncheck it. Another option is to open your case and see if your cdrom drive is physically attached to your hard drive with the same cable. It is better to have the hard drive and cdrom drive on separate ide controllers. You may need to purchase another ribbon cable if they are attached together. Also if your drive is Western Digital, you may need to set the jumper to single instead of master or cable select. It would be very unusual for a cdrom to DESTROY a hard drive. Bad sectors are normally caused by contamination of the drive from a foreign object like a spec of dust or the read/write heads crashed into the surface of the platter (you would normally hear a clicking sound as the drive spins). Hope this solves your problem.

Subject: [4phun-scan] I-20 Road Trip

Is it me or is highway law enforcement getting really lax? I can remember back in the 55 mph days the interstates would be crawling with cops. These days they're few and far between. I'm figuring speed traps aren't as lucrative nowadays since speed limits have caught up to how fast people actually drive. Also north-south interstates tend to be favored by drug runners versus the east-west interstates. Perhaps states are putting their resources on the north-south routes? I left Atlanta around 10 PM EDT on the night of the 4th. Seems there would've been more cops for DUI checks and such.

I saw ZERO marked Georgia State Patrol cars the entire time I was in the metro Atlanta area. I-20, from the Perimeter to the state line, was like a dragway. I was flooring a fully loaded UHaul barely keeping up.

I did see two state troopers in Alabama, but neither were actually on the interstate. One was off I-459 near the Riverchase Galleria giving some poor chump a DUI test. The other I saw from I-20/59 on another road. Lindsay Blanton's web site is right about the Alabama DPS EDACS system. I did hear it a couple of years ago in the Mobile area, but the freqs assigned to Birmingham and Tuscaloosa are not active. Both state patrol cars that I saw had VHF whips. It was too dark to see if they had 800 MHz antennas.

About two years ago I broke down on I-10 in Mississippi. I hit the highway patrol call box and two-and-a-half hours later a trooper pulled up. He told me he was the only trooper on I-10 in Mississippi. I was lowering my van on the jack when he pulled up asking if I needed help. I was thinking, "Yeah... two hours ago you doughnut scarfing $@#!". I'm thinking I-20 has equal numbers of troopers. A native Mississippian at work tells me Mississippi paves their roads with the smooth side down. I was hard pressed to drive much faster than 70 mph without rattling my teeth out and sending my wife and son bouncing all over the cab. So maybe radar guns are superfluous in a state whose roads don't allow fast travel.

Then there's Louisiana! In defense of the Bayou State, I broke down again between Slidell and New Orleans on that same trip in my van (I'll share the entire story sometime). I walked down to the state police call box, hit the button, and the wrecker beat me back to my van. Also when I broke down for good a third time in downtown New Orleans, the people of the Crescent City went out of their way to help me. I-20 was crawling with state police and parish units and it was the usual pissed off looking "suspect" standing with his arms crossed while the cops searched the car from bumper to bumper. Every stop I saw, the trunk was open, the doors, and two cops were searching the vehicles. I want to know how they get away with it? I've heard Louisiana's French based law makes it easier for police to search. However the federal 4th amendment still applies! I know cops get a cut of goods and money the seize and it's not uncommon for cops to rake in $100K a year.

I was not unhappy to see Texas. The only DPS unit I saw was a circa 1989 Chevy Caprice used by the drivers license testing people near Waco.

During my entire drive, the scanner was relatively quiet, even in counties/parishes using VHF and UHF. Strange.

John

320. data slicer question

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-07-07 21:49:01 UTC
From: K. Roberts
Topic: 320 Message: 320

Is there anyone around the H-town area that sells a 4 level slicer. I have tried to build a 2 level one, but just do not have enough electrical engineering skills to do the job. And since I'm going to have to buy one, might as well get a 4 level one. On a related note...has anyone tried the slicer made by Texas 2 way? I have read a few complaints that it does not seem to catch everything.

Thanks for the help
Kevin R.

Howdy,

I have heard that the Texas 2-way 4LFSK unit works well but may require a pre-amp for the input. However, if you can handle soldering a pair of 14 pin DIP sockets to a breadboard and then adding some capacitors and resistors then you can build your own unit that will work as good if not better than theirs.

BTW, one of the gripes over the Texas 2-way unit was that while it worked for many of the common one-way messaging protocols it gave poor performance when used to decode MDTs. However, Texas state law prohibits the interception of law enforcement MDT data traffic so it is unlikely that the Texas 2-way unit will get any better in this area.

The homebrew 4LFSK circuit works well for the signals in this area. I haven't tried it on MDT traffic since I have not been able to locate any. As I understand it, HPD and Harris County have moved to CDPD which operates over the analog cellular network which is of course covered by ECPA and other laws banning reception of cellular data.

Anyone else have any input on this aspect?

Regards,
Rick

Topic: 327 Message: 327

Been trying to figure out what the story is with cities of Morgan's Point and Shoreacres (near La Porte). They have their own frequencies licensed to them but I have not heard anything on them except some marine traffic on 156.150 MHz. The other freq is 155.910 MHz. For some reason, I had in my list that Shoreacres was dispatched by Lakeview on 453.825 but that was probably supposed to be for Taylor Lake Village. Does La Porte cover Morgan's Point and Shoreacres for PD and FD? Who covers Clear Lake Shores, BTW? I see they are licensed on 154.710 and 155.610 MHz.

Also, I see that Houston is licensing 154.310 MHz for many if not all of their fire stations. What is this for?

Having Dispatched for Both I can give you the Low Down.

Shoreacres is dispatched by Lakeview PD disptach on 453.825. They have let their VHF Channel (156.150) expire. They have a small police force and usually run 2 officers on a shift. Any old non-active VHF is from when these small departments were dispatched by their respective counties.

Clear Lake Shores is dispatched by Kemah PD. Kemah recently switched to 800 but Clear Lake shores does not have the money to seith right now. They are still using 453.725 for dispatch.

Harris County MDT's. All of the HCSO units use 800 for running plates and the CDPD units for JIMS (Harris County Crime Computer) The CDPD units are also being installed in Webster PD police cars in the next couple of weeks. These work using the same computer but using diffenent software for their respective database.

FOR AGENDA - IRAC Doc. 31061/2

FOR INFORMATION - AH-214 Ref. Doc. 31061/1

REF: AH-214-051

April 21, 1999

MEMORANDUM TO: Executive Secretary, IRAC

FROM: Convener, Ad Hoc 214

SUBJECT: Proposed Changes to the NTIA Manual for a VHF/UHF Public Safety Interoperability Plan.

Ad Hoc 214, in cooperation with the Federal Law Enforcement Wireless User's Group (FLEWUG) has developed a recommended plan for interoperable law enforcement and incident response operations in the 162-174 MHz and 406.1-420 MHz bands. These frequencies are to be available for assignment to all Federal Government agencies to satisfy intermittent law enforcement and public safety incident response requirements. Non-Government entities may use these frequencies only in cooperation with agencies of the Federal Government.

Ad Hoc 214 has approved the attached proposed changes to the NTIA Manual and forwards them to the IRAC for approval.

Attachment

4.3.X Plans for Interagency Law Enforcement and Incident Response Operations in the Bands 162-174 MHz and 406.1-420 MHz

CONDITIONS FOR USE

1. The frequencies shown in this plan are available for assignment to all Government agencies to satisfy intermittent law enforcement and public safety incident response requirements. Non-Government agencies may use these frequencies only in cooperation with agencies of the Federal Government. Federal agencies will provide written certification to non-Government agencies indicating that the non-Government operation is necessary. Non-Government entities will be advised in the written certification that under Federal law they are required to obtain a license from the Federal Communications Commission (FCC) for such operations, and that the FCC File Number for the license, once obtained, will be provided to the Government agency providing the written certification. A copy of this certification will also be submitted to the NTIA Public Safety Program Office. Federal agencies shall comply with the requirements of Section 2.3.12 of this Manual. The frequencies are available on a shared basis and will not be authorized for the exclusive use of any one agency.

2. All Government operations shall be authorized in accordance with Chapter 9 of this Manual. The FCC will submit all non-Government applications to the Frequency Assignment

Subcommittee (FAS) for approval.

3. Base stations are authorized use of the mobile transmit frequencies for access to fixed stations, e.g., repeaters. Mobile stations are permitted to use fixed station transmit frequencies for talk-around communications.

4. The following restrictions apply:

(a) the minimum ERP necessary to support the intended use shall be employed;

(b) the maximum base or mobile transmitter output power shall not exceed 125 Watts; and

(c) the gain of the base station antenna shall not exceed 6 dBi.

5. Exceptions to the above restrictions will be considered by the FAS on a case-by-case basis.

LAW ENFORCEMENT PLANS

1. Frequencies 167.0875 MHz and 414.0375 MHz are designated as National Calling Channels for initial contact and will be identified in the radio as indicated in paragraph 2 below. Initial contact communications will be established using analog FM emission (11KF3E). The agency in control of the incident will assign specific operational channels as required for incident support operations.

2. The interoperability frequencies will be identified in mobile and portable radios as follows with Continuous Tone-Controlled Squelch Systems (CTCSS) frequency 167.9 Hz and/or Network Access Code (NAC) $68F:

VHF PLAN

Mobile Mobile

Identifier Transmit (MHz) Receive (MHz)

Natl Call 167.0875 (Simplex) 167.0875

Inop 1 162.0875 167.0875

Inop 2 162.2625 167.2500

Inop 3 162.8375 167.7500

Inop 4 163.2875 168.1125

Inop 5 163.4250 168.4625

Inop 6 167.2500 (Simplex) 167.2500

Inop 7 167.7500 (Simplex) 167.7500

Inop 8 168.1125 (Simplex) 168.1125

Inop 9 168.4625 (Simplex) 168.4625

UHF PLAN

Mobile Mobile

Identifier Transmit (MHz) Receive (MHz)

Natl Call 414.0375 (Simplex) 414.0375

Inop 1 418.9875 409.9875

Inop 2 419.1875 410.1875

Inop 3 419.6125 410.6125

Inop 4 414.0625 (Simplex) 414.0625

Inop 5 414.3125 (Simplex) 414.3125

Inop 6 414.3375 (Simplex) 414.3375

Inop 7 409.9875 (Simplex) 409.9875

Inop 8 410.1875 (Simplex) 410.1875

Inop 9 410.6125 (Simplex) 410.6125

3. All applications using these allotted frequencies shall be affixed with Record Note Sxxx - This assignment is for a joint law enforcement requirement pursuant to Section 4.3.X of this Manual.

INCIDENT RESPONSE PLANS

1. Frequencies 169.5375 MHz, paired with 164.7125 MHz, and 410.2375 MHz, paired with 419.2375 MHz, are designated as the calling channels for initial contact and will be identified in the radio as indicated in paragraph 2. Initial contact will be established using analog FM emission (11KF3E). CTCSS will not be used on the calling channels to ensure access by stations from outside the normal area of operation. The agency in control of the incident will assign specific operational channels as required for incident support operations.

2. The Interoperability frequencies will be identified in mobile and portable radios as follows:

VHF PLAN

Mobile Mobile

Identifier Transmit (MHz) Receive (MHz) CTCSS

VHF Calling 164.7125 169.5375 None

VHF 1 165.2500 170.0125 As required

VHF 2 165.9625 170.4125 As required

VHF 3 166.5750 170.6875 As required

VHF 4 167.3250 173.0375 As required

VHF 5 169.5375 (Simplex) 169.5375 As required

VHF 6 170.0125 (Simplex) 170.0125 As required

VHF 7 170.4125 (Simplex) 170.4125 As required

VHF 8 170.6875 (Simplex) 170.6875 As required

VHF 9 173.0375 (Simplex) 173.0375 As required

UHF PLAN

Mobile Mobile

Identifier Transmit (MHz) Receive (MHz) CTCSS

UHF Calling 419.2375 410.2375 None

UHF 1 419.4375 410.4375 As required

UHF 2 419.6375 410.6375 As required

UHF 3 419.8375 410.8375 As required

UHF 4 413.1875 (Simplex) 413.1875 As required

UHF 5 413.2125 (Simplex) 413.2125 As required

UHF 6 410.2375 (Simplex) 410.2375 As required

UHF 7 410.4375 (Simplex) 410.4375 As required

UHF 8 410.6375 (Simplex) 410.6375 As required

UHF 9 410.8375 (Simplex) 410.8375 As required

3. All applications using these allotted frequencies shall be affixed with Record Note Sxxx - This assignment is for a joint incident response requirement pursuant to Section 4.3.X of this Manual.

I spotted a big HH-53 helicopter (one of my favorites!) headed north above I-45 from Ellington today about 1:00pm. Not sure if it was based at Ellington or not, and I didn't catch any radio comms from it as it headed north. About a year ago I spotted a similar HH-53 flying around downtown Houston. I don't know if these guys are on a training run or what. I have not seen too many of these helicopters around the Houston area before...

343. Houston UHF Federal Trunking

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-07-13 13:16:59 UTC
From: Chris Parris
Topic: 343 Message: 343

For a few years I kept a constant ear on the federal UHF band looking for any signs of a federal or military trunking system in the Houston area, but found none. There were some lists of NASA facilities that indicated that the Johnson Space Center was supposed to have a UHF trunking system, but have never found anything there trunked. While I was in Houston this week, I found a couple of UHF trunked systems that seem to be in the Houston area, but neither seem to be related to NASA or Johnson Space Center.

The first system I ran into is system ID 7707, which is a 5 channel Motorola Type II ASTRO digital system. The channels I identified with Trunker are 408.100, 410.025, 410.450,412.425, and 414.300. The system seems to come in better near the downtown Houston area, but definitly fades out in the Clear lake / NASA area. All comms have been in ASTRO digital mode, nothing in the clear yet.

Also late at night, I started to get a Motorola data channel on 408.300 mhz, which came up as system ID 550a. I was not able to determine any other channels used in the system, and the data channel was just marginally readable in the Clear Lake area, so I'm not sure where it might be located...

I checked before posting this, but niether system ID is shown in the lates list on Lindsay Blanton's site...

About once a year the military conducts exercises in downtown Houston. I recall a helicopter hovering above downtown at a relatively high altitude. I believe it served as a communications platform for the soldiers on the ground.
I would imagine that the communications routed through the helicopter were encrypted in some manner, but I'm certain the helicopter itself could be heard on the common air traffic frequencies.

Topic: 348 Message: 348

The freqs I have for the Federal Detention Center are 408.100, 409.650, 410.025, 412.425 and (now) 414.300 MHz. I wasn't sure if 414.300 was part of that trunk since it never got to be the control channel and all the comms were digital.

Another trunk system that I've heard was during band openings like we'll be having with this heat. Some of the freqs are 406.475, 408.075, 408.300, 409.100, 409.425, and 410.150 MHz. I think this is somewhere around Austin/San Antonio. Perhaps is is in Bastrop. Maybe someone on Centexcomm can help with this.

Right now, I hear a Motorola control channel on 409.100 and 411.175 MHz. There are a few of EDACS control channels I hear too, on 407.350, 408.175 amd 408.575 MHz.

Those of you who have trunker, see if you can figure out sysid numbers and associated freqs. Then we'll work on figuring out where they are and who they belong to.

Typically, the units responding to an airport alert communicate with each other on the HFD main fire dispatch channel, or one of the tactical channels.

That being said, I believe the crash units (the aircraft firefighting units based at the airport) can talk to the tower on the tower frequency, or some other aviation frequency. I don't live close to the airport so I have never heard them talking to the tower.

I don't know all of the frequencies off the top of my head. If you can't find them elsewhere, let me know and I can send them to you.

When I've heard this talkgroup, it sounds alot like the same console that Baytown uses. The dispatchers sound the same. Only thing is, that group does not appear in any list that I've seen submitted here. It sounds like they use it as an "info" channel. Don't know if Baytown units have MDTs or not. Listening to the downtown system for awhile and now the Baytown site, I haven't heard that group used. So maybe it's used at "peak" times. Anyone else have an idea on this one?

366. High altitude balloon launch tomorrow

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-07-15 02:27:55 UTC
From: Myles Barkman
Topic: 366 Message: 366

Tomorrow morning about 10:30 AM, a helium balloon will be released from Wharton municipal airport. Among it's cargo will be several transmitters. Might be interesting listening and for you hams, there is a crossband repeater for extra excitement.

Here's what it has:
Radiation detector will transmit CW on 28.322 MHz during ascent.
ATV will transmit video on 1255 MHz.
APRS/GPS data will be transmitted on 442.750 MHz in AX.25 (normal 1200 baud ham radio packet).
And definitely not least, the crossband repeater with uplink on 147.435 MHz and downlink on 446.600 MHz. So if you just want to hear people talking on the 100,000 ft high repeater, tune to 446.600 MHz.

Coordination on the ground before the launch and possibly during the search efforts after it "lands" may be either on 145.270 or 145.430 MHz in Wharton.

The VHF/UHF bands have been very open with the high temperatures causing lots of tropo ducting. Don't know if it will be very open as late as 10:30 in the morning. These balloons typically stay up for a couple of hours or so, taking most of it's time going up, and hopefully not coming down without it's chute open very quickly.
If it does get up to about 100,000 ft. (19 miles-it's no wonder they call this the edge of space) the range of the radios can be as far as 300 miles radius on the ground.

It's really neat what happens to the balloon when it reaches it's maximum altitude. With the pressure so low and very little atmosphere, the balloon expands to MANY times it's original volume on the ground. When it finally does stretch to the point of bursting, the material is so cold, it basically shatters and the package under the balloon starts falling quite rapidly for a couple of reasons. One, there is very little air/drag, and two, there is not enough air/drag to open and inflate the parachute. After it has fallen a ways, the chute starts to slow it down. If you watch the packet data on 442.750 MHz and can read it, you will be able to see the lat/lon of the balloon as well as the altitude. Sometimes they will transmit the actual ascent or descent rate. You will definitely be able to see when the thing pops. This data is also important as it nears the ground so that the mobile units can attempt to recover all this gear (hopefully intact). They incase the radios in a type of foam to both combat the extremely cold temperatures from affecting the radios and to cushion the radios upon landing.

All in all, should be very interesting/exciting. Doesn't happen that often so don't miss it. Oh yeah, if you're wondering about the danger it poses to aircraft, they hang a metal object or strips to reflect radar so it should be easy to spot.

Don't think the upper level winds are too high these days so they expect the balloon to land within 10 miles of the Wharton airport. So don't expect it to land somewhere in the Houston area on a freeway.

If you want to hear more about this, tune to 146.700 MHz tonight at 10pm.

367. Trunker 3.8 help

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-07-15 03:58:02 UTC
From: K. Roberts
Topic: 367 Message: 367

Well I finally got my 2-level slicer up and running. Now I need some help with the Trunker program. It is running, I only run it from DOS. My question is editing the files that I tell it to save when closing down the program. It is saving them as .bak files. The documentation says that I should be able to find .txt files. Maybe it has to do with the fact that I have not set up the single variable setting in autoexec.bat file. How do you set up the file? It tells me how to set the file up in the autoexec file, but not how to set up the initial file. And of course my DOS programming skills are very minimal at best :)....(blame it on Bill Gates :)) Any help anyone could provide would be much appreciated. Just FYI, I have trunker saved in c:\trunker....if that matters.

Thanks
Kevin R.

369. more balloon info

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-07-15 04:37:02 UTC
From: Myles Barkman
Topic: 369 Message: 369

Here's some updates to the balloon info I posted previously.

First of all, the launch will be at 10:00am, NOT 10:30.

Talk-in to the airport will be on 444.600 MHz with PL of 71.9 Hz.
The previously reported repeaters in Wharton do not appear to be active.

They will try to send the cut-down command to release the package from the balloon when the balloon reaches 70,000 ft.
If this is not successful, they predict the balloon to pop on it's own at 94,000 ft.

The predicted drop zone will be about 5 miles southeast of the town of Ganado or
about 16 miles southwest of El Campo.

The signal on 28.322 MHz will not be CW as in morse code but rather a semi-constant carrier where the lack of tones corresponds to ammount of detected radiation.

I am running trunker 3.8 in windows, mine saves it in a .bak? file and as a txt file too. Refering to the grps and sys info.One seems to be like a temp file while the other is more perm. Can you run from windows? As I am not a dos guru. If I remember correctly I didn't do any autoexec.bat file configs. However I just use mine for analysis only not for TT. If you don't any other responses e-mail me off list and I might can help. n5gqb@...

As I remember, narrow band FM limits you to 4800 baud on the lower frequencies , faster on the UHF.
More like digital packet video. It was part of an ad that the News Dept ran some time back
I am not sure if it is still being used, when it is used, it can only send a single frame, not full motion.
Kind of looks like a bank cam. one frame every so often

As you know , the larger the web page, the more time it would take to load.
so here is a case where less is better

Topic: 372 Message: 372

Skip/Ducting is working very well in far west Houston this morning.

Marine frequencies rarely heard are coming in as if the transmitters are next door:

Channel 9 156.450 Vietnamese language
Channel 13 156.650 Barbours Cut area
Channel 16 156.800 Emergency
Both Coast Guard Corpus Christi (broadcasting a search advisory at 0820 and 0850 about an ELT activation near Port O'Connor) and Coast Guard Houston
Channel 22 157.100 Coast Guard, voice sounded like the CC dispatcher

Rice University PD, 453.200. Rarely heard west of IH 610, West Loop.

And, re: 444.600, at 0850, no comms re: Wharton, but lots about finding directions to Texas City. Is there a meeting down there today? Discussions about 146/ I-45 / and Johnny Palmer Parkway.

Yes that's Texas City allright. Im here in Seabrook. Another thing that was good last night was just regular TV. I was getting Channel 5
and 12 San Antonio as if the transmitters were here in town. I could also get channels 7, 24, and 36 in Austin and Channel 29 in Lake Charles. I could barely get 26 because another station was interfering. Didnt have time to stay up last night and do some major DXing so I didnt listen to the radio, but on the way home I noticed a few locals were coming in as if they had interference from outside stations.

It's when someone reaches up and grabs your nose and stretches it out about 6 feet, and when they let it go, it just hangs there swaying back and forth.

hehhehehe!! Just joking....I too am curious as to exactly what "Trunked" units are. All I know...is you can hear dispatch, but cannot hear any responses.

From: bpckty1@webtv.net
Topic: 376 Message: 376

Corpus Christi and Port O'Connor Coast Guard Channels 16 and Corpus Christi Channel 22 are still coming in strong. An aircraft on 16 at a rescue off Port O'Connor sounds like it is in my neighborhood.

Unknown on Channel 13, Navigational, tells unknown receiver to go to Channel 12, Port Operations. If I remember correctly, Channel 12 is CC Port Operations.

12 156.600
13 156.650
16 156.800
22 157.100

Just heard a base on 16 tell the Pirate Lady to go to 24. This is 161.800, radio telephone, per Police Call.

Houston Port is on Channel 5, 156.250, but I have not heard any comms on this frequency.

Mighty strange skip tonight heard in far west Houston. Local traffic is quiet, but the over the horizon stuff is coming in clear as a bell.

Trunked systems allows more people to use the same freqs. than would be possible without a trunked system. For instance, instead of your local PD, Fire, EMS and County SO all having their own frequencies (which is normally about 5-10), they call all go on a trunked system and only have to use 10 freqs. for all for them put together. A computer controls the system and decides who gets to talk when and on what freq. For instance, the police should always be able to get a freq. even if the system is full at the moment (rarely happens). If the local public works dept. is tying up a freq., and there is not an empty one for the police, it will just kick off the lower lever unit. Does any of that make sense?

In a nut shell, it just allows more people to be on a fewer number of freqs., thus reducing the need for unused or rarely used freqs.

Hope that helps
Kevin R.

ps. surf around for trunked systems for more info

There has been a bit of tropo ducting the last few nights. For example, HFD 154.160 (for San Antonio listeners this is the strongest signal coming out of Houston) and several out of town DPS stations were booming in to San Antonio last night (Friday, July 16). Sounded like a locals.

I use the weather (though during openings there may be three or four stations coming in together) and DPS freqs for band opening indicators. 146.520 is good also if the hams are talking.

Can any one explain why this happens. For exmp i heard 96.1 KIWW from Mcallen on my radio. THen my VHF Hi band was going nuts! I heard the Dps say Houston 2520 then the usual king victor david the tag check 10-24,10-29. I heard a couple of Stations asking for Radio checks then i heard them say Lufkin 2220, Dallas 22..then i heard Mcallen 22..Which seemes odd dont they have a CTCSS or a PL tone? It seemed they could here each other.This is very common during summer last year i heard the DPS from Missisippi on VHF lo.I need help now can anyone identify these freqs?.170.395 had voice.173.230 had beeps like that ballon gps thing and 173.050 had a weird RTTY type of transmisson for like 2 secs then it would stop.Also on 452.250 i heard what sounded like a trunking repeater then it faded out and i heard morse code..Well i hope this happens more and more cause its kinda fun hearing weird Freqs.

Does anyone have the freqs. that might be used tomorrow at the Katy Flatland Bicycle race? Or maybe you know of a general range to search through. I'm sure they will have their own radios for support/control as well as the help from the local sheriff's departments. I don't know the exact route, but they go thru Harris, Ft.Bend, Austin and Waller counties. In case you are wondering, no I'm not riding in it, I have a friend that is coming down to ride and I was going up there to add my support.

Thanks for the help
Kevin R.

ps. thanks to all for the help with trunker, have it up and running. I will pass along the talkgroups for the Ft. Bend system as I get more ID. I have about 45 of the 67 trunker found ID.

I used to work with sick puppies medical patrol, and we did katy, alvin and the ms 150. At every event I attended for 3 years, Law Enforcement radio was not used, it was local ham operators that provided the communications for the bike tour officials. They relayed messages to us if some one was hurt, of relayed it to police, if needed. The hams were the only event coms that I know of.

Now that I've thought about it for a sec.....yes, PD, SO and EMS has thier own comms, but we were all connected through the hams, as a central dispatch....the hams wore orange vests and were at every rest stop. For example, if WE as EMS were having a prob with someone, and no PD or SO were at the site, we would go to the hams who would relay the call to thier base who would call the police. If PD and SO needed an ambulance along the route, they would call thier dispatch, dispatch would call the ham base, the ham base would decide which rest stop was closest, call their hams, and the hams would run over to the ambulance and tell us. kind of a crude method of comms, but with so many agencies involved, and not having a central frequency that all radios could use, and if I remember correctly, this is how it was done.

The comm freqs. are kept secret until the day of the ride. However if you check the Katy repeater(KARS) and any
others out in that area you may get lucky and find the repeater.
The reason it is kept secret is that a few years ago we had problems with interference from a person who
wanted to cause problems.

Kevin,

Howdy. Most of the communications are on the 2 meter amateur band. If I remember correctly, 146.880 was the primary repeater used during the last MS150.

389. San Antonio webpage

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-07-23 18:48:38 UTC
From: Dayne Daines
Topic: 389 Message: 389

I am working on a page with active frequencies for the San Antonio area. Not much there yet but it will be updated. Additions and corrections much appreciated.

----> http://www.picone.org/radio/

Is there a site that has a list of ham repeater for the San Antonio area?

Thanks.

Friends,
Does anyone have HPD'S "channel 8" frequency? Also, ae their "car to car" & "citywide" frequencies 2 seperate channels?

Thanks, Dan

Hi, Dan...

HPD Channel 8 is 460.225 mHz. It is simplex, which means that you must be fairly close to the units when they
are using channel 8 to hear them. This is usually used as a car-to-car channel when the HPD units are near by
each other. The Citywide frequency, Channel 5 (460.425 mhz - which is through a repeater), seems to end up
being a car-to-car frequency when the units aren't close enough for channel 8.

Also check "B-3", 460.525 mHz, as this is tied in to the Harris County trunked system, but some HPD units still
like to use this as a car-to-car channel when Citywide is closed for a special event...

Chris Parris

Channel 8 460.225 also car to car no repeater on this one must be close to hear.
City wide 460.425 channel 5 this is on repeater tone 123.0

To whom it may concern,
If you are interested in frequencies in the Houston, Texas area. May I suggest that you visit a site at www.clarc.org/~kg5ai/index.html
Once there, you will find everything you are looking for. And more. The site is designed and maintained by Myles Barkman. If the URL doesn't direct you there, the name of the site is, The Frequency Zone. If needed you may find it via a keyword search, using the words "radio and frequencies and Houston and Texas".
Happy Listening!

Sincerely,

Gerald James

To whom it may concern,

Concerning the legality issue of repeating information overheard when monitoring police broadcast. Whether it's legal or not, please consider how you would deal with your conscience if you divulged sensitive information that might endanger undercover officers. If for no other reason, consider how privileged we are, to have the right to listen. Personally, I do not think it is illegal to monitor transmissions, as long as they are not in the cellular range. But then again, I am not a lawyer.
I am sure all concerned buffs are discreet in their sharing of such information. I applaud Myles Barkman for not divulging ongoing operations.

Thanks
GwJJ

409. ECPA

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-07-27 02:00:00 UTC
From: Myles Barkman
Topic: 409 Message: 409

This might be a good time to review some of the laws that effect us as scanner listeners.

Here's a link to a lot of legal mumbo jumbo about privacy of communictions heard (among other media) on the radio.

http://www4.law.cornell.edu/cgi-bin/htm_hl?DB=uscode18&STEMMER=en&WORDS=electron+&COLOUR=Red&STYLE=s&URL=/uscode/18/2511.html#muscat_highlighter_first_match

The subject of privacy of radio traffic is a debate that has been beat to death many times over. Without starting a similar thread here, I offer this page which has been well though out dealing with laws regarding wireless privacy.

http://www.interplaza.com/scandfw/laws.htm

Basically, the Communications Act of 1934 says that if you overhear something that was not meant for you to hear, keep it to yourself. If you talk about what you heard to someone other than the two (or more) parties engaged in the original conversation, then you are in the wrong (and legal action may be taken).

Living in the city we are in (Houston metro), there is lots of nasty stuff going on out there. There are times that we will hear on-going tactical comms regarding intelligence and resolutions to these situations. I have to bear some resposibility to not interfere with the actions of law enforcement agencies in any way I can. Some people will (and have) go so far as to say that the very existence of my frequency lists puts people in danger. I believe this is a little radical and stick to the notion that scanners and lists don't kill people, (you know the rest). I can't control who gets my lists or what they will do with the information. I also won't do background checks on people subscribed to this list to see if they are law-abiding, responsible, reputible people.

Some common sense applies here too. If there is a car chase, I probably would not be concerned with talking about it as it happens on this list. This would be because:
1. The suspect knows he's being chased by police.
2. The suspect most likely does not have access to list list in his car while being chased.

What was happening last night was some hostage situation. SWAT got him a phone to talk to them on and a pack of cigarettes (by demand). He made mention that he had prior military experience and had knowlegde of the use of explosives. Police refered to the contained area as a "compound". The suspect did release the hostage(s) but kept himself barricaded. They could see him walking around in the compound in fatigues and turned off som

lights. I don't recall hearing any mention of weopons. That's all I have to offer. I don't know how it ended, and I can't find a shred of evidence in the TV news, news websites or the Chronicle online. Perhaps it was an excercise. Like I said last night, sometimes these exercises sound so real. The thing that made me believe it more to be real is the ongoing situation about the suspect wanting his cigarettes. I would not think that that much attention would be afforded to such a thing in an exercise. Did anyone else hear what was happening?

Back to the divulging issue. When weighing the options to discuss a sensitive matter when there are law enforcement officer's and innocent civilian's lifes at stake, I'll always side with caution. It's not that important to me that everyone else listen to the same thing that I am-especially when I don't know who else may be the other one listening.

I think we as a group and society at large are going to have to address this issue - right now internet access in a car is rare. Ironically, that is (or so I'm told) what HPD has now - that's what CDPD is - a 19.2k IP wireless connection. The prevalence of cell phone use is so diverse that it is no longer a status symbol. Most new cell phones being sold today are WAP or internet enabled so the belief that someone in a car or walking down a street does not have mobile access can't be assumed.

I have overheard HPD on city-wide during a car chase using voice comms to coordinate deploying a "stinger" to blow-out the tires of the car being chased. This requires getting someone well out in-front which can be a challenge. I won't even go into the possibilities here of a suspect making use of a scanner or being provided information via a cell phone.

For those of you interested in the legal aspects of this hobby, I suggest that you subscribe to scanlaw@egroups.com. Message activity on the scanlaw list is infrequent but the material posted there is quite good. It seems that a few of our fellow scanner enthusiasts are also attorneys.

Here's a thought: let's make the sender of the communications responsible for their own privacy. If you don't want everyone on your block to know your

business - don't yell it out in the street - walk over to your friend and whisper in their ear or if you must yell (read: broadcast over the airwaves) then use a code that noone else knows. This is such a simple concept made complicated only by the laws currently in place. To keep this list focused on specifics to the Houston area, please reply on the scanlaw list.

> <snip>

Discretion is the better part of valor. That philosophy works well on our area freeways, too!

Regards,
Rick Parrish

I pick up lots of traffic while walking around the Galleria (some en espanol). Try listening in during large public events. The radios only put out a half watt so you need to be fairly close. I wouldn't expect much traffic out in the 'burbs.

From: Myles Barkman
Topic: 416 Message: 416

I can tell you that FRS is alive and well in Pasadena. Trick is, it could pop up anywhere at anytime. I've got some neighborhood kids that use them on occasion like CBs. I've heard some businesses use them (even though they are not supposed to be used for business). Where they really come alive is at large, mostly public gatherings. These are some of the places where you'll hear most FRS use:

- Amusement Parks
- Malls
- Camping
- sports stadiums
- races
- festivals

Imagine any place where family members may go and split up and the possibility of getting lost or seperated is high-you will most likely hear FRS radios. This is exactly why the service was created. It is a relatively cheap, low power, low interference, and low abuse type radio service. If you go to katy Mills, or any really big mall on a weekend, especially near Christmas, you'll hear traffic on every FRS channel and they will be interfering with each other. Range on those half-watt radios can be as high as two miles but used inside, expect about 1/2 a mile. I have all 14 channels programmed in my mobile rig and scan them with everything else when I go to and from work. Sometimes I never heard anything on my 25 minute ride and sometimes I hear a couple of people using it for business. Just depends on where you are, and where they are.

There is a vietnamese restaurant on Bellaire Blvd. using
FRS for comms between the kitchen and waitstaff.

For anyone wanting to get an FRS radio, I've seen these guys -
http://www.globalcompsys.com/ - selling them for $60 a pair.
I've also seen them being auctioned off at Fair Auction -
http://www.fairauction.com - for $25 a piece.

Comments
I HAVE REPLACED IC-5 ON THE CPU PCB ON MY VER 1.0 MODEL PRO-92 AND NOW HAVE VER 3.25. THE RADIO SHACK PART NUMBER IS MX91070 AND COST $53.99 (US). I HAD TRIED CLONING UNITS WITH NO LUCK. THE IC IS VERY SMALL DON'T TRY IT W/O GOOD SOLDERING EXPERIANCE. THE COMPLETE BOARD IS ALSO AVAILABLE, IT IS RS PT # XB-91521 (FOR VER 3.25) AND COST 219.99. HOPE THIS HELPS SOME ONE, BEST OF LUCK TOM.....

Re: REPLACING IC-5 GIVES VER 3.25 ON PRO-92 PRE DATE CODE 04A00
From: John H.
Date: 7/27/2000
Time: 11:27:06 PM

Comments
If the part costs $53 and the labor is the standard $49, then the total cost of an upgrade would be $102.

Note...

I believe that the shack will upgrade old PRO 92 for merely the service charge.

Topic: 423 Message: 423

True, the frequencies seem to be quiet, then, all of a sudden, you hear a family convoy on I-10 heading to Sea World, or while passing near Astroworld, all 14 frequencies become very active. It all depends on where you are. I believe the restaurant is the Tan Tan. Anyone speak Vietnamese? You might also want to check out Landry's in Kemah. They use 2 or 3 channels amongst the wait staff, cooks, and supervisors. There are probably other users down in Fertittaville.

8 IS 460.225, But it is a low power frequency and you need to be within about 2 miles of the broadcast. You can hit most of the main frequencies by starting with 460. 025 and going up with .025 increments.....IE.....025, .050, .075, .100, .125, .150, etc...up to about .600.....that will hit most of the major channels.

Actually I do believe it's a Felony to divulge information heard over a scanner, to thwart a police operation. The Police Call book that you can buy at radio shack, has a section on it and covers the specific legalities. I seriously doubt that a list subscriber here would purposely put an officer's life in danger, but then again....

When I took a Weapons of Mass Destruction class through TEEX, which is part of Texas A&M, they told us that in an earlier class, one guy came to class late, and was very rude, demanding to be let in, and was later identified as part of the Texas Militia. <sp?> So....ya never know!! :)

I didnt actually go to A & M. They have a program called TEEX, where the instructors travel around the State. We were invited to attend by some friends that work for Rural Metro Ambulance service. It was a 3 day 32 hour course and was taught at the Rural Metro station off 45 north. It was like 500 something bucks, but the state paid for it. Got a really cool T-shirt though....has the haz-mat symbol, skull and crossed swords on the breast with the words Weapons of mass destruction, and says Specialized Medical Urban Response Force in big letters on the back. It's a black shirt with white lettering, and when I wear it with my black BDU's and black SWAT jump boots, and have all my gadgets hanging from my belt, well....I do look rather intimidating! heheheheh!!

Begining on Sept. 7 the Houston Police dept. is providing a police academy for citizens. It is an 11-week course on Thursdays from 6-9 pm. It is at the police academy on Aldine Westfield. From what I understand the sessions start with tours of all facilities including the academy, EMS, SWAT, and Bomb Squad. You also complete a ride-along with an HPD officer and some time behind the wheel on the Academy track. Please let me know if anyone has participated in any of these classes. I am interested in going and would like to hear from someone who has attended. It sounds like an interesting class.

I would like some info on this also, if anyone has it. I have had a "Citizen's Academy" flyer sitting around here for several years, It's an actual application, so I assume they have been doing this since at least 1996.

As far as I know, HPD has NOTHING to do with any EMS operations. I wish they did. A LOT of HPD officers are EMT's, but most do not even know the difference between an ECA and an EMT-P. As I understand it, a person who has passed the TCLOSE <sp?> exam is considered a "Peace Officer." BUT....this person is NOT legally considered a POLICE officer, unless he/she is employeed by a State licensed Police Agency.

However, an EMT (of whatever level) is an EMT 24/7 whether employed or not. EMT's are certified throught the Texas Department of Health, and if they are in good standing, they have state-wide certification, no boundries or agency ties, EXCEPT for TDH. In the past, I have been threatened by an officer, to be arrested for impersonating an EMT, just because I was not currently employed by an agency, and this is an ABSOLUTLY false method of thinking. If I am working on a patient at a scene, and am told to STOP by a police officer, that police officer better be of my EMS skill level or higher, and assumes full responsibility for the patient, the moment he orders me to stop. Otherwise, I have to ignore him/her, and continue to deliver patient care. (tactfully, of course)

YES, I would love to see, PD, S.O., and EMS get together and form a working relationship, where our legal duties are taught to police officers, and an understanding is made between the departments. As of yet, that has not happened, on a wide scale basis. At least not in Houston.

I was with HCEC in '91.....as far as I remember, we never had a prob with HCSO or the contstables .....IN THAT AREA. My probs stemmed from running across wrecks while in my personal vehicle, and assisting HFD, and things like that. Nowadays, I have my own emergency service, and carry a gold badge, and ID, and I have no probs. BUT I know for a fact, an EMT running across an accident, and stops to volunteer to help, runs the possibility of getting harassed and threatened by law enforcement, because they do not know the scope of an EMT's capability and jurisdiction. Which I feel is silly, cause the officer and the EMT are on the same side working towards the same goal. (usually) Law enforcement needs to be taught, during the course of the academy, the role of the EMT. Just an opinion though. :)

Does Law Enf. Still make EMS crews wait until they feel it's safe to go on scene? Sometimes they aren't the brightest of people.... By the way, what's going on now in Harris County?

From: ems.cougar@juno.com
Topic: 434 Message: 438

Law Enforcement does not make EMS wait. We make ourselves wait. Number one thing, is scene safety...above all. A couple weeks ago, we went to a scene while I was riding with HCESD. It dropped as a "cutting" when we got there, there was no S.O. on scene. The door of the house had been kicked off the hinges. We backed off the scenen and just waited for S.O. Several people came out to the ambulance, and inquired, and we had to explain that we could NOT enter the house until law enforcement was there.

We had accidentally driven up right onto the scene, while looking for the house.
Turned out to be a scratch on a female's wrist, and she was a diabetic, diet controlled, but she was worried so she called 911.

It was a no-load of course, but we backed off and shut off all the lights, even interior lights until S.O. got there, just in case. As far as I know,...Law Enforcement has never "MADE" us wait, it just something we do as a self preveservation tactic.

To answer the question: "Whats going on in harris county".....

Uh....the usual I guess. Car jackings, Assaults, GSW's, Stabbings, Cuttings, Rapes, Sick calls, Police chases, Suicides, Major Rise in Bank Robberies, cars going through people's houses, etc.... ya know....tha usual stuff.

Rural Metro Ambulance is only in two parts of town these days. It has pulled its houston operationa. RMA can be found on the Galveston and Pasadena 800 systems. The rest are on Nextel and UHF LTR Systems.

eeeehhh....it's just a sign of the times.....people who own houses are buying more big screen TV's and people who own cars are starting to miss the old drive-in theaters.

444. Mormon Temple Open House

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-08-06 12:10:35 UTC
From: bpckty1@webtv.net
Topic: 444 Message: 444

Went to the Open House for the New Temple for the Houston Area Latter Day Saints on Saturday. It is an interesting tour. The only drawback was NO CAMERAS. But, they were having an interesting shakedown cruise. It seems that they did not have a large enough generator to handle the electrical power for the reception tents (overview of the faith and the video rooms). Occasional outages and having to move from one theater to another was common. But, the generator that was responsible for the AIR CONDITIONING was in PERFECT CONDITION and had NO PROBLEMS.

Radios were in use for the tour guides, reception tents and security. Security was easy to spot. They look like the Men In Black, with earpieces. Except for one, who appears to be a supervisior. He was wearing a light colored suit. He was the only one who appeared comfortable in the heat.

They are using what appear to be rental radios, which seems likely, since, once the temple is dedicated, it will be open weekdays, and will be limited to those of the Mormon faith. And, as such, they probably won't require as large a security force.

They appear to be using a three or four channel system. I heard them tell the ushers and maintenance (janitors) to go to channel two, but I was not able to confirm a frequency as channel two. Simples Frequencies found, channel order unknown are (all using DPL 343):

464.8375 Host Supervisors
464.4875 Hosts, Tour Guides (2?)
463.5875 Security

Hits on the Scout:

464.8250
463.6125
and, oddly,
457.5625

When you attend, be sure to bring plenty of water and comfortable shoes. The first water fountains are inside the temple, and you do a LOT of walking and standing, especially when there is a crowd. Tents provide shade, but it was warm. I was lucky, I got there just before the rush, but when leaving, it was tight exiting the building even though the routes were well planned and there was a large crowd, several tour groups of about 30 people each, waiting to enter the building.

Enjoy.

445. Ellington exercise?

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-08-06 14:44:44 UTC
From: Myles Barkman
Topic: 445 Message: 445

I believe there is some group out at Ellington doing some exercises. Yesterday, some group was at a shooting range. Today, I accidentally came across some ops on 171.3875 MHz. Callsigns used are "control", "FS", "response 1", "response 2". Sounds like they are looking for ordinance. One unit was told to look for an object in a tree and that it could be an "AH-3", "F7" or "E9". There was just a positive ID on the item-it is a "Tango 7-22". He "recommends procedure Alpha". These guys are being so covert! They said not to use "hydrozene(?)" on it or the locks. "Proceed with procedure Alpha" and that sand bags were being send out there. There was talk of chutes earlier.
Anyone familiar with this kind of lingo and what they are practicing? Comms sound like walkies and maybe mobile units so you probably need to be within 5 miles of Ellington to hear anything. One guy just asked if they REALLY wanted him to take the sand bags out there. Another guy shouted "NO!".

On another unrelated note, I did hear 135.000 MHz used for the first time yesterday by the Air National Guard helicopters. They also used 41.000 MHz. I can't even hear the base ops 3 miles away with an outside antenna so I think their antenna system has been compromised.

448. South Texas trip

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-08-07 19:58:24 UTC
From: albertorea@webtv.net
Topic: 448 Message: 448

Hello all i just got back from Edinburg tx a small town in South Texas about 15 MI from the border. I heard some radio traffic along the way 59, 77S, i heard no activity in the 29-54Mhz range except a weird cell/cordless phone on 33.1 i m not sure about that but it popup there. The marine band was rather quiet except around Rockport, Corpus and towns near the Gulf. I heard numerous fire depts on 154-155 as well as the DPS i heard no police activty though.. I had a 3 ft tall antenna on the car. The 460 band was quiet..Seems everyone moved to GE/Erisson trunking i heard about 1 Motorola Trunking Channel throught the trip..Ericsson is really hard to monitor on a 235! in Corpus there was alot of activity on there 800 mhz system (i scanned them conventionaly) from Kingsville on i heard nothing but weird beeps on 156.000. When i arrived the radio came alive a small town with GE/Motorola radios is sure interesting(yes GE/Motorola) I heard the Mcallen Trunking on 865.050 doesnt change daily i only managed to get 2 IDs 16016 and 16032?...There were more but i didnt notice them like those. Also i heard mexico on 162.525! on the WX ch. Luckily they use 162.400 as the WX ch. I scanned the 160-174 band and found OTAR the annoying squelch deal over and over and i heard some FBI/DEA or something. the 460 band was quiet except 460.025 which was a local police ch. i heard mexico again this time on 462.975! a Fire/EMS ch they were speaking spanish and i heard several mexican streets which i am familar with. As the week went by i coulndt wait to get back and monitor non stop activty (VHF really stinks in rural areas) Oh and to my amazement i took my FRS radio and guess who i found? The US Army! they where at a local school for health free clinc on CH 6 no code or Pl we tried to talk to them but they would switch CHs i knew it was them because i went to the school and saw them with cheap Audiovox radios. Anyway on the way back i saw alot of Border Patrol cars with VHF antennas as we stoppped at the inseptions station i noticed they had Motorola saber 3 radios kinda like SC in houston. well on the way back in the Rural areas i heard so pretty good comms on FRS. I will probably go again on SAT. Anyone know what freqs the Border patrol are on?
Alberto

449. Are you interested in metal detecting ???

I also heard, On good authority that AMR was pulling out of Texas all together, and the big-wigs had been told to get thier resume's together....that was last year...nothing happened. So....who knows? I heard the same thing also, and I really hope they BOTH pull out. THAT would be too totally cool!!

I'm not sure which addy to send this to, so it's going to the list.

Dwayne....Mindy Manley

Thanks for dropping the tape off at my house. Please forgive the condition of the front yard, I am very embarassed about it, but have spent all time re-building Trans-Star EMS, and going to school. When the money starts coming in again, I DO plan on having the place professionaly landscaped! The Frazer ambulance we want to get, will not look good in a trashy yard! hehehhe :)

Anyhoo, I will get to the store this weekend and get you a clean fresh tape....thanks again, I'm gonna go watch it now!! :)

Cougar!!

Hey Dwayne/Mindy...

Just saw the tape, it turns out that I saw this show about a year ago, it's the one with Capt. Vickers, and Dr. Pepe (le pew :) was in charge. Pretty cool to see it again though.
I sometimes do volunteer 911 rides with Harris county, HFD (for school) Clearlake EMS, Cypress Creek EMS, Liberty FD/EMS, and a few others....now if I could get THOSE agencies to allow me to video tape scenes, I'd be able to put something together that would make your toes curl!! hahahhahah!! :)

P.S. Ya'll wouldnt happen to know any who does welding do you? The roll cage in my Thunder bomber race car is only "tack welded" in, and I need to find someone to finish it.

From: albertorea@webtv.net
Topic: 458 Message: 458

would anyone know what this frequency is used for...I was an HPD Explorer and took my scanner and we fiddled with the radios and we always worked off B2 TAC-1 460.375 for events but i keep hearing action on B4 460.075 all i hear is North bound on 45 number 3 lane...Stuff like that i heard it once in Pasadena when an umarked HPD unit was following a red truck but i never got close enough to see. Also there was an HPD unit for about 20 MINs on the Rosa-Allen Drenge off of 225 and Scarborough there were alot of vehicles there but i coulndt see or hear anything.

Dear Mindy,
460.075 is a surveillance channel. When in use, you'll hear some neat stuff. Sometimes you'll hear one of the airplanes relaying information to units on the ground. See Myles' list for some to the "TAC" channels which may also be used as part of the operation. You might check out the BATF and Customs channels as they (on occasion) are also used in conjunction with this channel. Often when in use, and if you are close by, you can pick up the surveillance teams on the ground.The ground teams often use low power channels. If HPD is involved they may use one of the 465.XXX channels. (See Myles' list) My advice is to stay waaaaay back, as the surveillance teams often watch for counter-surveillance. If your curiosity over powers you and you just can't stay away. Watch out, you may be seen by the surveillance team and get mistaken for one of the bad guys. ----- Original Message -----

I do my watching via the radio speaker.
I can not say I know alot about surveillance but know enough to stay out of the way.

464. HCSO officer was shot today

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-08-12 02:46:06 UTC
From: Dave Gigante
Topic: 464 Message: 464

Activity on TG 11728 and 208 (on the HC trunk) indicates that a Harris County officer was shot today. I don't know any details, but I do know that they have setup a Blood Bank for Saturday downtown Houston. If anyone has any details about donating, specifically where and when it is, and if it's open to the general public or officers only.

As much as I enjoy monitoring public safety, I don't like hearing something like this, and would gladly donate a pint if they would accept.

Thanks.

465. RE: [HoustonScan] HCSO officer was shot today

Yahoo group: HoustonScan (1999 — 2002)

From: Karl Schwartz
Topic: 464 Message: 465

The officer was a UC with the HCSO OCU task force and suffered a grazing wound to the head, not life threatening. One suspect ate his own gun, another took a hit from the officer and the third was arrested. The deal went down at a La Qunita motel where about 100 cops and their wives were gathering for a wedding reception so there was plenty of backup!

Actually the bullet entered the front of his head (near his eye) and exited the back. He's in critical condition at Hermann.

If anyone hears any info about the blood drive, could they pass it along? Thanks.

I am looking for police and fire dept. freq's around the Fort Hood, Killeen, Belton, and Harker Heights, TX (Central TX). Also, can anyone access the FCC database and if so, where can one find it?

Thanks,

Chris

I realize this post ws from awhile back, but I just joind and I have an answer to part of your question. La Porte PD/EMS uses 155.625 as their primary. La Porte PD dispatches for Morgan's Point PD, on this same freq. As for Shoreacres, the Lakeview PD dispatches for Shoracres PD (I'm not sure of the freq). La Porte FD is dipatched on 154.130. Hope this helps.

Chris

From: cmahlstedt@excite.com
Topic: 473 Message: 473

Can you please explain what a data-slicer is? Also, I'm not sure what they are called, but the equipment you can use to find frequencies. Where can they be purchased? And finally, you can listen to a runked system if your scanner is not a trunking scanner right?

Thanks,

Chris

474. Re: [HoustonScan] Questions

Yahoo group: HoustonScan (1999 — 2002)

From: geraldwjamesjr
Topic: 474 Message: 474

Dear Chris,
I am not sure what a data slicer is. One type of equipment used for finding frequencies is called a frequency counter. One place which sells them is Optoelectronics. They have several different units which will find frequencies for you. One, is called the Scout. When hunting for frequencies with the Scout, you'll need to be close to the transmitting source. Usually within eye sight. More or less, depending upon the strength of the transmitting signal. The Scout also stores up to 400 frequencies. It can also be connected directly to certain scanners whereby you can immediately hear the transmission. A frequency counter will not demodulate the signals. They will only let you know which frequencies to program into your scanner. There are however, some gadgets such as the "Explorer" which can capture and demodulate the signals. The only drawback is the price. You can check out the Explorer at Optoelectronics.com's web site.
If you go to the Optoelectronics.Com web site, you'll be able to view the specifications and other information on the equipment. There are several electronics stores and web sites which offer the Scout. I recommend that you visit Optoelectronics as they are the manufacturer. You may or may not be able to beat their price. I am not sure. My advice is to shop around first.
I have purchased equipment from Grove Enterprises grove-ent.com, who also carries the Scout as well as other neat stuff.
As far as trunking is concerned. You can "listen" to a trunked system but you really won't be able to "follow" a particular transmission. A "simple" way to explain a trunked system is that the frequencies change each time a radio's mike is keyed. You can however, get your feet wet on a trunked system by programming the frequencies in a bank. When doing this, you'll hear data on one or more frequencies. (lock these out) I also recommend turning off the delay feature. Then, be prepared to hit the scan button at the end of each transmission. Keep hitting scan each time the scanner stops on a frequency until you find the conversation you are intending to hear. I do not know how many channels your scanner has nor do I know the number of frequencies for each bank. But, if you have enough space, you may try putting the frequencies in the scanner twice. Once in forward order and in reverse order. I one read that this would make it easier to "get to" the desired frequency faster. I really don't know if it helps but what the heck. By the way, sometimes the control channels change. So be sure to check out the ones which you have locked out as from time to time these may be used for transmitting.
On another note, I think certain software is available which can follow trunked systems. That is, if your scanner can be controlled via a computer. You may find some links to vendors of such equipment from Myles' site. You may also find it in Grove Enterprises web site. I have purchased scanning software from a company called ScanCat. I do not know if they offer such equipment. You may want to visit them at Scancat.com .
I hope this little bit of information has helped you. I am somewhat limited in my knowledge of trunking scanners. Although I have one, I haven't taken the time to program it. You may want to visit a web site by Myles Barkman. His, is considered by many one of the best. It's loaded with information and frequencies.

Happy Listening,

Gerald James

To supplement Gerald's answers to Chris's questions ...

data-slicer - small inexpensive electronic circuit which takes a low level signal - usually from the discriminator output of a scanner - and turns it into a digital signal suitable for use by a computer.

You can either build one for a few dollars in parts cost or buy one already made for about $40. Texas-2-Way and RadioShack.com sell these.

From: Myles Barkman
Topic: 476 Message: 476

Here's some new freqs to keep your ears open for future use. Ring in if you hear activity on them:
460.0875 Police Friendswood
460.1625 Police Friendswood
463.250 Baybrook Mall
464.100 Baybrook Mall
453.1125 Police Shoreacres

460.200 sounds like the new TAC2 for Friendswood in place of 453.325.

In case you've ever wondered what Aldine ISD school buses were using, I found them on 153.065 Mhz repeater a couple of days ago. This is not licensed to them. Their input of 159.735 is, though.

Can anyone figure out what school district is using 463.650 MHz?

TXDOT sometimes uses 151.025 around town on simplex. Not sure when this is used as opposed to their 47 MHz radios or 800 MHz on the HCSO system.

Make Sure you have the latest list of Freqs for the the downtown site.
Lifeflight rarely affiliates to the outlying sites due to the fact that the
helicopter is so high up.

483. updated lists

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-08-18 04:22:51 UTC
From: Myles Barkman
Topic: 483 Message: 483

Just uploaded some updates to my Houston frequency list and Harris County trunk talkgroup list.
Haven't been working on the HCSO list much lately so let me know what new stuff there is to hear.

Also created a CIMA (channel industries mutual aid) radio checklist of stations heard during their regular daily 6pm radio check on 489.0875 or 489.1125 MHz. They seem to have been using 489.0875 more lately. I think they use whatever floats their boat. Their radios can scan all channels so when the net control guy comes on, he tells everyone what channel to go to to conduct the net. It took me many times listening and taping this net to figure out who all the players were. Now that I got it figured out, I'm asking myself "why?". Guess only I and the chicken who crossed the road will ever know. BTW, every company on the CIMA net has their own callsign. Just haven't figured that all out yet.

Look for future updates to Pasadena trunk list and League City updates soon.

Mike is right about Lifeflight going to be heard only on the downtown system. I've never heard them on any other satellite system. Hence the comment at the top of my list, "Some of the talkgroups may not be heard on the downtown or all remote systems." It depends on where most of the units for that agency are in the county and if someone is tuned to a different system than normal for better coverage. Since Lifeflight has mobile units in the air, the need to switch to other systems for better coverage is not neccessary. I'm sure they have the capability though, especially if the primary system fails.

For listening to 800 I would use a commercial 800 Antenna like the Maxrad MUF-8003S and a NMO trunk lip mount or Mag-mount

This helps with 800 tremendously over a standard scanner antenna.

In my truck I use an 800 glassmount and an 800 transit antenna made by Antennex.

Myles,
Recently you wrote about CIMA, so I thought I'd tell you what I know about their procedures.
I know that they have half of their membership test their radios at 6pm, & the
other half at 3am. There used to be a 9am test, but it was discontinued 3 or 4 years ago. The older CIMA radios I was involved with had 3 channels, & a scan mode-which is where it was left when not in use. A list with al member names, phone numbers, & call signs, was issued once or twice a year. Each company-just about everyone on, & near the ship channel, would do the testing for one week according to their order on the list.
There were so many members each company only had one or two weeks a year assigned to them.
The ship channel area was divided into zones-for example, the Goodyear & nearby plants at 225 & Goodyear Dr., were in zone 2.
Types of emergencies:
A.Standby alert
B.Assistance call
C.All out call
D.Civil defense alert
E.All clear
The Pasadena Fire dispatcher, & the Baytown Fire dispatcher shared CIMA dispatching duties, with Center st. in Deer Park being the dividing line.
All of the alarms were written out-for example-a 1st alarm would include the closest companies to the affected plant with the equipment needed by that plant.
If a plant needed a foam engine (pumper),
the closest would respond (if possible).
The La Porte, Deer Park, & Pasadena Fire Depts., are all CIMA members.

Dan,

Thanks for the info on CIMA. A few weeks ago before I really started listening to their nets, I was up at 3am and was surprised to hear them doing a test at that time. Didn't think that it was a whole seperate bunch of folks. When I was looking at the list of callsigns licensed for CIMA members though, it looked longer than the list of folks for my 6pm net. This answers that puzzle. Guess I better grab the VOX tape recorder again. I won't be listening to those nets live.

The radios you describe must be the same ones they are still using. It sound like they have the option of going simplex on the repeater output since I've heard net control sometimes jump to simplex and I've heard some companies respond in simplex. Heck, I've even heard some companies respond on the wrong channel.

I deduced that each company got to call the roll for a week's time and that they go by the order of the roll call for determining the next net control. I wish that they all called roll the same way. Some radios have a digital burst at the beginning of their transmission and some guys start talking as soon as they key the mike, effectively missing the first one or two syllables of a word, or even the first word. This made it pretty hard for me to determine the name of some of these companies.
Some net controls wait about 30 seconds between calls for a response making the net last about 30 minutes long. Others speed through it in about 10 minutes. Some of these guys also don't seem to even know the names of the member companies and stutter or obliterate the name so you can't figure it out either. Hopefully, these guys won't be net control in an actual emergency.

Fortunately, haven't heard many actual emergencies to determine whether Pasadena or Baytown FD still does the dispatching. I've seen reference to the channels being divided up between "east of center" and "west of center", but never figured out how that applied. It sure doesn't appy during the radio checks.

Do you know if the member radios of the dispatch radios have a display on it of some sort to identify who is talking? Many of the radios transmit either a data burst or even a DTMF sequence at the beginning of the transmission. Would you happen to know what this was for?

thanks

Can any scanners accurately monitor 490 trunking?
I drive for a motorcycle transport company and my boss does the dispatch over the radio.
He will only tell me..... this is running on.
He says that it can be picked and I think it cant who is right?
Dwayne

Who's the company? What radios do they use?
Which type of trunked system are they using?
What (any how many) frequencies do they use?

If it is a Motorola or EDACS system then it can
probably by monitored with the BC245XLT.

490 LTR trunking can be followed by a couple of different scanners including the optocom, optotrakker, PR0-92(a), Pro-2067, and by the up and coming BC-780xlt. You have to have all the freqs for a particular site. You can also try to monitor by finding the home channel for the group you are trying to listen to on a refularlar scanner(There are only a few home channels). If the channel is open this is where most of the group's conversations will happen. Gary's Towing Service Operates on one of the Champion Communications systems downtown (Allied).

495. TX DPS

For those of you who follow such things, the TX DPS is testing yet another new paint job for marked patrol units. This one is white with a wide black stripe following the fender lines, front to back. The markings are the same Texas shape door decal and State Trooper lettering. I understand from a contact at Headquarters in Austin that this paint job is disliked even more than the all black cars they tested a couple of years ago.

Topic: 499 Message: 499

If you have old copies of Police Call lying around, it may be a good idea to hold onto them. They can really come in handy when someone's license expires and they continue to use the frequency.

Case in point is the Port of Houston Authority.
They had a license for 453.1125 and 458.1125 a few years ago that expired in Dec. 98. I've been hearing stuff on these freqs that sure sounds like port activity with possible emphasis on law enforcement. PL is 162.2 Hz. Could be some kind of security. Fact is, you would have never found this on the FCC's search by frequency since it ignores expired licenses. I dug out my 1999 Police Call and found the old license callsign. You can search the FCC site with this callsign but they don't give you too much info on it.

Different subject:
I may have heard some simplex activity on 463.025 MHz. It had PL 127.3 so it was probably a Houston Ambulance. This could be some close range channel used to cooridinate or for a BS channel. Maybe give it a listen and see what you come up with. There will be the regular patient report activity on this channel also.

With all the TX Forestry service activity around due to fires, has anyone been hearing lots of their comms in the 151 and 159 MHz bands? I think they use 154.280 MHz a bunch so they can coordinate with area fire departments. Has anyone heard fire spotting or fighting activity in use in the federal bands?

Seems like alot of these shuttle bus services in operation at Hobby airport. I haven't found any of them licensed though:
453.025 may be car rental (still not licensed)
461.3375
461.8875?
469.925

There may be more but that's all I have so far. If you look at my list and search for the words "not licensed",
you'll find several freqs. I think I'd be safe by saying there are hundred of folks using unlicensed stations in the business bands and even in the public safety bands in the Houston metro area alone. This causes problems in several regards.
For one, it's hard to identify the user so you know what you're listening to.
For another, it causes potential interference problems between licensed, legitimate users, and the bootleggers.
Hey, maybe the FCC is hiring, or they need to be.

500. 940.025

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-08-23 04:21:50 UTC
From: Sly Kapchinski
Topic: 500 Message: 500

Myles or anyone else;
Anyone know who (industry?) uses the 940-941 mhz section or what this section is reserved for?. Police call
says its reserved for "personal communications" but this is no help. I've got some high powered digital
transmission interference coming from 940.025 that is near 24/7 duty. Tends to wipe out (desense) most of my
radios thru out the 800 mhz band anywhere within 2-3 miles of the source. Tried to look up the freq on the fcc
data base with no avail. Doesn't seem to ID itself either or at least very infrequently. Can't find any visible
antennas or towers where interference is the worse. May have to do some DF'ing.
Anyway anyone have any thoughts or ideas?.
PS- I do not live in the Houston area. So part of my question is what do you guys hear down there within this
range?

Sly

The 940-941 MHz is now in use by the PAging industry. It is used primarily by the Carriers as the Tx Freq for the new 2-Way systems that are in use. Skytel, Pagenet and Pagemart all operate 2-Way systems of the own. The other major carriers (Aitouch, Metrocall, Arch) resell these systems thru agreements.
Hope this helps.

504. CIMA radios, etc.

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-08-24 08:30:17 UTC
From: Dan Raithel
Topic: 504 Message: 504

Myles,
None of the CIMA base station radios I've
seen have had any kind of display on them,
just a channel selector, an on/off switch,
& a scan switch. Personel doing the tests are usually security guards-some
making as little as $6.25 an hour. This accounts for the flurry of mistakes
that can be heard during the tests, & actual emergencies. Its not really
their fault-most guards recieve very little CIMA training- I know, I've been
down that road myself! So, what you have are, people who get little pay,
little training, and very few chances to work a CIMA emergency. Even the
dispatchers screw up because the system just is'nt used enough. There are
several CIMA drills every year, but its no where near enough training for
anybody involved.
I work in the private security business as a site manager, and I have my
training people go over CIMA on a regular basis.
CIMA regulations are in 2 large notebook volumes. The 1st is the history &
procedures manual, the 2nd, the call-out alarm cards-what company goes to
what plant on what alarm. Howevever, all members are free to bypass this and
call others directly for equipment & manpower.
As for the order they go in for radio tests, I'll have to look that one
up-there may not be one!
As for Center st. being the dividing line,
Baytown fire dispatches all calls west of Center, & Pasadena east of Center.
The idea is to give Baytown a break if the emergency
is in their area & vice-versa. By the way, CIMA was organized in 1955,
according to the last manual I looked in.

Thanks for your help,
Dan

460.6625 MHz is used by Exxon near Market St. and 201.
Lots of those splinter freq repeaters are used by plants.

Been searching around for the airboss freq for the Ballunar Festival. So
far, only finding lots of chatter on 123.450.

With the NASA open house going on, lots of activity on the air:
408.050 JSC Hospitality?
408.575 JSC Security
409.600 JSC Fire Dept.
461.400 Space Center Facilities
464.775 Space Center Tour Buses

I went to the Nasa open house deal and found ALOT of radio traffic on 461.400 464.375 464.475 464.775...and i also heard them on CH7 on FRS they said "Parking For ALPHA is Full" Then they said we need you in building 35 they sounded really proffesional. And of course alot of FRS Traffic. I also saw to HAM's they had radios and looked at me funny because i had a scanner in my hand and an FRS in the other. One was wearing a hat that had his call sign..Over all it was really neat and fun. I wonder why the JSC cars had a really small antenna?

From: Mike Holland
Topic: 512 Message: 512

Just to let ya'll know. Reliant Energy's 800 Trunk System will soon be hosting some parts of the former Entex Gas Communications. Since Reliant took over most of the utilities in this area, there has been a consolidation of communications. Start to look for these new talkgroups outside of the existing programming matrix that is inplace now. There has also been rumors of HL&P giving up their trunk system to go to nextel or some kind of digital IDEN system. This is not the case. Their system will remain analog and in its same form.

The new motorola 800 digital system that is being pushed on many people is called "Harmony."

http://www.motorola.com/NSS/Press/press_archive_2000/20000613a.html

This is the technologie that is behind the "Harmony," Iden.

http://www.mot.com/LMPS/iDEN/addl_info/overview/sys_overview.html

If you want your own personal Iden Trunked System look at:

http://www.telario.com

The Telario is a self contained 1.9Ghz personal trunked system. It is pretty slick. You can have 16 talkgroups, Private Call, and Phone interconnect. Very Slick. And it costs $400 to $500 for the handheld and $880 to $1020 for the base unit.

From: Myles Barkman
Topic: 520 Message: 520

Major accident on Tollway over ship channel.
Pasadena's Rural Metro is on scene requesting backup from Channelview and possibly North Channel EMS. Total 6 patients so far. They are going to close traffic on Beltway going north-bound so ambulances can reach scene going wrong way south on northbound lanes. No word yet on possible use of Lifeflight. Rural Metro just had a "fleet accident" involving one of their own. Didn't catch where it was or if it at this incident.

Traffic on Rural Metro group 7664 on Pasadena Trunk,
Channelview on 154.370 MHz,
and North Channel EMS on 155.175 MHz.

Myles

Interesting what you can find on the web when browsing through government sites.

Here's info about mutual aid frequencies used by the Texas Forest Service when fighting fires with other agencies.
The file is an Adobe Acrobat .pdf file so you need that program to view it.
http://ticc.fws.gov/maplan/appendix/a12.pdf

If anyone knows of any active freqs used by Texas Forest Service, pass them along.

Also, here's more than enough info for people that want to know the fire fighting situation report for the southern region.

Found a Back Channel for several Police officers in the Spring area.
They use this for Chit-chat and to target their next traffic victim.

461.150 PL 114.8

Has good range. It is on a tower near the Hardy Toll Road and I-45
at about 400ft.

It is licenced to Specialized Communications.

Galveston County Trunked Radio System

Motorola Type II Smartnet

System ID: 6F2E
This system came alive on April, 23, 1999 at 16;00hrs. All Frequencies will be in use at all 3 sites,. The system will be in analog but will eventually be converted to an ASTRO system. They have been using DES-XL for testing of deviation levels. The System is supposed to be fully and will have total county switchover by August 1, 1999. An interesting side note is after they promised the county that this system would be secure from scanner listeners, Motorola showed them a Trunktracker last week and then told them it would not be secure.

Users of system:
Galveston County
City of Galveston
Hitchcock
Texas City
Tiki Island
Santa Fe
Dickinson
Bayou Vista
(La Marque will not be switching to 800)
(Friendswood will not be switching to 800

Topic: 530 Message: 530

Interesting announcement heard on tonight's 8PM broadcast on W I-10 VFD's radio.
"Effective immediately, Channel 2 will be the Primary Frequency. Channel 1 will no longer be the Primary Frequency."

Interesting.

Well, unfortunately, there is a fire happening as I type this, so I am able to monitor this new radio plan. I was hoping to just capture training, announcements, and the "fill the boot" activities to see how the new plan will work.

Here is how the frequencies/talkgroups are being used, for now:

Channel 1 855.9625, conventional, pager and repeating the Dispatcher's broadcasts, not the units in the field.

Channel 2 HC, Talkgroup 15728. Very active, both sides of the radio traffic.

Channel 3, HC, Talkgroup 15760. Not heard yet.

33.920 Toned/Repeated Dispatch Channel 1 and repeats Channel 2.

Well, the Fire Marshal has been requested.
The Fire Chief has some concerns.

531. Northwest EMS - Tomball Texas

Northwest EMS put up a new repeater on Thursday afternoon for Primary Dispatch.

TX - 155.295, 192.8 (Repeater Out)
RX - 157.530, 192.8 (Rpeater In)

Anybody see anything peculiar about this pair?
The Tx is a Public safety Freq (PM - KNDF345), and the Rx is a business freq (IG - WPQN864).

The RX is part of a new license the aquired as part of a co-license with Yellow Cab. (152.270, 157.530) and when it was put into service they foud Yellow cab was sending out constant data on 152.270 and had to change the Repeater out so they went with there Simplex back ch freq.
So it looks like all the way around NWEMS was / is planning to use the Ch. against regulations. Hope they don't get caught.

534. FCC License for 800 Mhz frequency pair

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-09-02 18:35:11 UTC
From: Rick Parrish
Topic: 534 Message: 534

Folks,

There are just enough people on this list that license, install, maintain, and/or operate small radio systems that I thought I would ask ...

I need to acquire a pair of frequencies in the 800 Mhz band with the usual 45 Mhz split for use in the Houston area. Primary purpose is DATA for a wireless mobile application but possibly with some voice. The reason for using this band is the availability of cheap hardware.

Are there any slots open? Also, are there any inactive channels where the licensee is just sitting on them?

I also need to acquire a central repeater to serve as a base station.

Regards,
Rick

155.295 seems to have gone silent in the past month. Apparently,
West Harris County EMS is now totally 800.

I was wondering who was on 155.295 last night. Definitely EMS, but
was not repeating WHCEMS

536. some interesting freqs

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-09-02 20:50:15 UTC
From: Myles Barkman
Topic: 536 Message: 536

Hearing some helicopters talking in regards to (possibly) forest fires on
123.025 MHz. One used a callsign "tanker" so I suppose he's dropping water
or retardant on the fire. Could they be dropping firefighters into remote
fire areas?

Other freqs to listen to Texas Forestry Service around here are:
131.8 151.160 *TX Forestry Service
151.310 *TX Forestry Service? Conroe
94.8 151.385 *TX Forestry Service-Fire Spotter Planes-Conroe
100.0 151.475 *TX Forestry Service-Woodville
118.8 159.225/151.160 *TX Forestry Service-Conroe
131.8 159.225/151.160 *TX Forestry Service-Conroe
100.0 159.330/151.370? *TX Forestry Service-Woodville
94.8 159.375 *TX Forestry Service
100.0 159.420/151.370? *TX Forestry Service-Conroe (tx with 118.8 PL?)

Also been hearing Coast Guard Ops. Should be busy this weekend:
156.500 Marine Channel 10-Seabrook Rescue (tows)
156.800 Marine Channel 16-Emergency and Calling
157.050 Marine Channel 21A-US Coast Guard primary ops
157.100 Marine Channel 22A-US Coast Guard Safety Broadcasts & secondary ops
157.175 Marine Channel 83A-Coast Guard Auxilliary-Seabrook Radio
Group Galveston also uses 5320 kHz and 5696 kHz USB.

Oops, got to remember not to hit "enter" in hotmail after typing in comment field.

I'm a bit confused on the Harris County trunk Talkgroup assignments for West I-10 and West Harris County EMS.

I thought West Harris County EMS used 15728 and 15792.

From the looks of things, I'm thinking that this is how my list should be:

15728 West I-10 VFD Ch.2 Primary (simulcast on 33.920 MHz)
15760 West I-10 VFD Ch.3 Secondary
15792 West Harris County EMS Ch.1
15824 West Harris County EMS Ch.2?

The dispatchers may be using the Clodine system so unless a unit is tuned to the downtown system, I don't hear them that often.

539. license for Conventional repeater in 800 band

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-09-02 21:29:07 UTC
From: Myles Barkman
Topic: 539 Message: 539

The trend these days in trunking; be it Motorola, LTR, or EDACS. You'll probably have a very difficult time trying to find or even justify getting a license for a lone pair in the 800 MHz band. If it were possible to find one, it would probably be below 856 MHz. Even many freqs in the 851-856 MHz band are trunked though. Questions they may want answered are:
-Why the 800 band? (already addressed as inexpensive equipment)
-What kind of range/coverage do you need?
-How much power will the base/mobiles/walkies use?

Some of the other guys that actually deal in the communication business might chime in and clear this up. I'd like to ask them also if the FCC would ask what times of day the radio service would be most used.

547. more fires

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-09-05 10:17:53 UTC
From: Myles Barkman
Topic: 547 Message: 547

Just heard Lufkin fire unit on 154.010 tell dispatch that he was at edge of Angelina National Forest and saw fires at the tops of trees and they were popping. He said he was getting out of there. I hear Angelina National Forest guys on 171.475 talking about it now.

I'm trying to finalize a list of Texas Forest Service freqs as well as US Forest Service. With the band open every night, should be lots to listen to unfortunately.

I know this isn't really Houston-related but it's kind of interesting to hear this stuff from the Hosuton area.

Listen for US Forestry on 164.825, 168.750, 169.900, 168.625 MHz.

554. Off Topic Request

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-09-06 19:13:38 UTC
From: ems.cougar@juno.com
Topic: 554 Message: 554

The ISP, "JUNO, is not worth paying for, even at 10 bucks a month for internet access. To make a long story short, I dropped thier services.

But I forgot to get something off the net before I did. There is a 100% free ISP out there called freewwweb.com. Unfortunatly, since I have e-mail ONLY now,....I cannot D/L thier software and check out thier service. I am told that this is one of the few freebies that does not have a floating ad banner to get in your way constantly. Could someone please find the site an see if it wouldnt be too much trouble to D/L the setup program and e-mail it to me in an attachment, if you have the time??

Purty pleezzze??? with a cherry on top?? :) :)

Cougar!!

Topic: 555 Message: 555

I have been informed that Juno bought out Freewwweb.

Well.....poo!!! That really bytes.

I've had nothing but probs with JUNO, from unkept promises and always having to FIGHT the software to stay connected to the net, and usually losing. One shouldnt have to dial in every 15-20 mins, just to get knocked off again, while surfing. Anyhoo.....dont mean to gripe, JUNO just really gets under my skin!! :) Thanks for the info everyone.

Guess it's back to the drawing board to find a free ISP without a banner. I dont mind advertisments, but that floating banner is more trouble than it's worth.

thanks again,

Cougar!!

From: Myles Barkman
Topic: 556 Message: 556

Sounds like a fire/explosion at the Exxon plant in Pasadena. Pasadena FD on scene using TG 7312 on Pasadena trunk system. Have not heard activity on CIMA.
Sounds like they are conducting searches/counts of plant personnel. Have not heard of injuries or casualties.

If you don't mind paying a few bucks.... Try www.freedsl.com. It's not really free, but if DSL is available, they are running a deal where you buy the modem for about $200 and then to get the faster DSL service it is about $10.00 per month. Otherwise you can wait for the rest of the pack to bring their $40 - $50 "DEALS".

I know that Sangean builds receivers for several companies including Radio Shack so it's certainly a possibility. Would you happen to remember which model of Radio Shack receiver you suspect is the same?

568. RE: [HoustonScan] Shortwave info -- Sangean <-> Radio Shack cross reference

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-09-07 15:48:24 UTC
From: Major, Greg
Topic: 568 Message: 568

I think that just about everything Sangean has sold in North America in the last 15 years has had a Radio Shack model equivalent. Such Radio Shack models as the DX-350, DX-395, and DX-397 were Tandy's equivalents of some of the smaller, cheaper, Sangean analog portables.

Here are some Sangean model numbers, followed by their Radio Shack equivalents:

ATS-505 DX-402 (new)
ATS-606 DX-399
ATS-803A DX-440 (discontinued more than 5 years)
ATS-808 DX-380
ATS-818 DX-390
ATS-818CS DX-392
ATS-909 DX-398

The DX-396 is said to be made by Sangean. It does not seem to have a Sangean model numbered equivalent in this country.
There is still not a Radio Shack equivalent for the Sangean CC Radio, which was developed in cooperation with the C. Crane Company and sold for the first year or so exclusively by C. Crane, and now sold under the Sangean name by other dealers as well.

From: Sly
Topic: 569 Message: 569

Seen in the new RS catalog they now have (making) an FRS mobile radio.
It plugs into the cigarette lighter and the actual radio/controls are in
the hand mic and comes with an external mag mount antenna.

They also have an FRS intercom too.

See page 81 in the 2001 catalog items 21-1850 and 21-1845

Actually the radio part fits into the base of the antenna that goes on top of the car.

I am hearing, or think I am anyway, some traffic associated with the visit of the democrat party vice presidential candidate to Houston on 453.125 (CyCreek), 489.1125 (CIMA) and one other freq that I haven't pinned down. The speakers are not assigned users. Discussions of motorcade arrangements and arrivals> Nothing of sensitive nature but interesting choice of freqs. By the way I am listening on BC760 stub antenna in Sugar Land, so I guess they are using the repeaters.

The freq. Coord. used to be Dick Fenner W5AVI but I don't know if he is still doing it.
You might try Bob Biekert (KA5GLX (at CLARC) or their web site http://www.clarc.org/ or on
442.750 MHz (PL 103.5).

From: ems.cougar@juno.com
Topic: 578 Message: 578

I was on another e-groups list about another subject, and a subject came up. Everyone was kinda upset about the advertisement being placed at the top of each message. Turns out it irritated a LOT of people. I myself had to disable the mail header window, to be able to preview messages. Egroups refused to do anything about it, so we moved the whole list to something called Smartgroups... http://www.smartgroups.com .
turns out it works the EXACT same way e-groups did before they made that irritating change. If the list owner here ever runs into the problem of members getting irritated at those ads, ...just wanted to let ya'll know that there was a solution.

Cougar!!

First of all I'm not speaking for any tv station only as one that does work for a commercial Television station. We do use radio communication in our news gathering but I can tell you that our two-way radio system is not our primary source. All of the news stations in Houston use celluar telephones, laptops, data and microwave channels, sat phones...nextel...and we all scramble....and every now and then we stop and use a pay telephone!

And everyone knows that we all listen to each other, so you can't take a word of truth out of anything you hear on a media channel.

I wish we didn't have to guard our frequencies. But when working a news story you have to guard your sources as Houston has become a very media hungry market. And sometimes the information we talk about on a radio might not be right. And believe it or not we really do work very hard to get the story right!

The bottom line is you like to listen to radios and scanners because it's your hobby and It it's a great hobby... My co-workers and I talk on the radio because it's our job...and we might just be able to save your life just before the big storm hits, the bomb goes off or you really would like to know if that hurricane in the gulf is headed this way...think about it!

As to everyone listening, several years ago, there was a great rivalry between Shadow Traffic and Metro Traffic. One company finally got fed up with the other company using the information its reporters transmitted to the base station. So, they reported that a box of Monkey Nails had been dropped on Allen Parkway. Guess what was reported by the competition about five (5) minutes later. Yep, a big "Gotcha" and coverage on all the TV stations. Jud McIlvaine (I hope I spelled his name correctly) (ok, I'm showing my age) made a big deal about this. Soon afterwards, the companies started using code words for locations/incidents/stories/and, I guess, coffee and donut runs. What a fun time to listen to the scanners.

From: Myles Barkman
Topic: 590 Message: 593

Again, I was on my way home when AF-1 landed. I haven't heard much on the radio from Secret Service.
This is what I have heard traffic on:
460.225 Houston PD
460.350 Houston PD
460.400 Houston PD
460.450 Houston PD
164.8875 Secret Service (some comms in the clear)
165.375 Secret Service (DES encryption)
166.5125 Secret Service (DES encryption)
167.025 Secret Service Pager
When AF-1 is taking off or landing, might give a listen to 162.6875 and 171.2875. I believe anything on these will be DES encrypted though.
Anyone else hear find some good freqs to listen to?

From: Myles Barkman
Topic: 595 Message: 595

Found a group of freqs licensed to the city of Houston. Heard some activity on 458.2625. At work the other day, I heard a weak repeater on 453.2625 MHz. It may be in the downtown Houston area. Not sure about who is using this and what they do. I hear stuff about freight elevators and moving things around. I wonder if it could be convention center ops. If anyone is in the downtown area and can try to figure out who is using this, give it a shot. If you can't hear the repeater, you may hear the units on the input much better (like I do) on 458.2625.

Topic: 597 Message: 597

Did anyone hear anything on the following two events that occurred Wednesday evening/early Thursday?

1. Warrant served/at least two taken into custody on Timmons Lane near Richmond Ave./undercover - all partcipants in the take-down were plain-clothes, some wearing hoods so as not to be identified. Only one marked HPD vehicle, all others unmarked. Mostly concluded by 7pm.

2. Simple car chase/pursuit across Edloe bridge over SW Freeway, continued
east on Westheimer at about half-past midnight. Suspect car was a red blur that blew right by me!

I stumbled onto item #1 first hand which happened in my own courtyard. Didn't have my radios on (darn)!

Regards,
Rick

Miles..that weak repeater with the discussion of freight elevators was one of the Museum Of Fine Art Repeaters..I work there in Security..

Saturday we had our annual Open Museum day..the public got in Free, and we had a lot of traffic..one of our elevators broke down an we had to use one of our freight evevators to transport people...there was a lot of discussion about the elevators...the repeater is weak, since it is only needed to work in the museum area..what you heard was our Security channel.

Sorry this so late. Just found it on the scca trans am seris web page.
I think this race control for the SCCA tran am bunch.
Might only be active during the trans am practice and race.

RADIO FREQUENCIES:

All teams are required to monitor the Pro Racing Race Control
frequency ? 462.0250 ? throughout the event.

Dwayne (wish I could make the tran am race) Jones

Miles..i think you wanted the other frequencies for the museum..my vx5r is
in the car..i'll have to look at it and will send you the other freq's.....
those other mobile freq's aren't used there..
the frequency is shown as lisensed to the Ccity of Houston, but i've never
heard them..of course with pl tones cranked in they wouldn't be heard if
they were there....

I would please like to know if anyone knows if a Frequency Counter can
be modified to recieve frequencies from a transmitting source without
having to be up close to the transmitting antenna? I have a Realistic
frequency Counter with the antenna that was supplied with it. Any help
would be nice .

Thank You

Like how far are you talking about? I can give you some general ideas of range of what to expect
if you'll expand on what your trying to pick up.
Optoelectronics makes a active preselector that allows the counter to see just a 4mhz spread of
freqs. In effect it eliminates nearly all rf hash outside the freq slice your looking at which
in turn dramaticly lowers the noise floor and makes your counter a lot more sensitive. Use this
in combination with a beam ant tuned for the freq your trying to intercept and you could
probably nail some hits at a pretty good distance. Last time I checked the preselector sold for
around $800. I think they still make it.
Other than that use an antenna (rubber duck) tuned for the band your trying to pick up on. If
your shooting for 460-800 mhz signals try one of those "miracle baby" type antennas. they do a
real good job at attenuating signasls below this range.

609. Texas Renaissance Festival

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-10-01 14:13:04 UTC
From: Myles Barkman
Topic: 609 Message: 609

This is opening weekend for the Texas Renaissance Festival. Looks like it will be a great day outside and maybe I'll come back with a few freqs.

Didn't get a chance to monitor race stuff this weekend. Anyone find some good stuff?

As far as freq counters go, I've never owned one but Sly has has a few. You can't really "modify" a freq counter to work at a better distance or it would not work very well. You can "enhance" it's ability in certain parts of the band so that it will work farther from the source, so you don't get something for nothing. That will effectively shorten it's range greatly on the other parts of the band. If you used a beam antenna, that will inprove range as well.
You will most likely have to be within a hundred feet or so of the transmitter (depending on it's transmitting power) to reliably pick it up on the counter. I just pulled that footage out of the air so that may not be quite correct. You can sometimes pick up broadcast stations, pagers, and NOAA weather radio a good mile or more from it's transmitting source. It's those high-power stations that will swamp the pre-amp of the counter and make it more difficult for you to pull out some stations you are looking for. That's why a preselector is a good choice in these areas.

From: Christopher Hysinger
Topic: 609 Message: 610

I wasn't looking too hard, but I did manage to find some race related frequencies during the event today. I was too far away from downtown (59 & Greenbriar) to pick up any race team transmissions.

451.375 107.2 Seemed to be some type of catering or food service operation. Heard one conversation about getting more tequila to the suites.

451.8125 173.8 Race control. Very active whenever there was a crash.
461.950 136.5 Made reference to bike units around the race course. When one unit couldn't get through, the command post said to contact him on 800. Unknown exactly which agency.

That's all I got.

Chris

Topic: 612 Message: 612

FYI, I did have email attachments discarded in this list for awhile. Seemed some of the signatures and what not were getting out of hand. I re-enabled them last week or so. I suppose each reader can determine whether or not to allow attachments to be downloaded to their boxes if they so desire.
I was just trying to get rid of some of the clutter and minimize the time to download messages.
Just something for those of you with "fancy" signatures to think about when folks with slower connections are trying to download email with pictures and such.

Sorry for any inconvenience.

p.s.
Ren Fest monitoring wasn't too exciting. I'll post a more detailed summary perhaps tomorrow.

We usually get a LOT of things like shoplifters, people trying to break into cars in the lot, etc. Saturday someone broke thier arm in the inner circle. I sat out in front of boothe 232 saturday and watched 3 officers coming from 3 different directions. The looks on thier faces and thier stride perked my interest....sure enough, they popped someone, and the shoppe keeper came along shortly to confront and identify him. Seems the shop keeper had been following him and had witnessed him go and change clothes. I was about 100 ft away, and moved just into earshot, as the officers corraled the suspect. I see a lot of this...since Im there from fri nite thru sun eve every weekend.

season before last, I was sitting outside the SCA compound in the shadows. It was just after close, and the patrons were still milling towards the front. A guy and a girl were walking towards me, past the mug shoppe next door. He reached out and grabbed a mug. His G/F told him to put it back. He said "don't worry, there's no one around." As he passed I stepped out in front of him, with crossed arms and said "excuse me sir, but you'll have to put that back." He just shoved it in my hands and continued on down the walk with his G/F jack-slapping him and cursing him!! :) hehehhe that was cool! I returned the mug to the shoppe owner....it sells for about 30 bucks.

From: RANDY LECLAIRE
Topic: 614 Message: 614

I know many of you may think this is spamming but I don't think it is because it is still dealing with scanners and scanning.

I have started a group solely dedicated to listening to scanners using the internet. In this group we can post websites that host online scanners/shortwave and others.

I know I enjoy scanning alot here in Ottawa, ON,Canada But I wouldn't mind listening to scanners online throught the u.s., canada and other parts of the world.

So if your interested in learning about these. Please feel free to join
http://www.egroups.com/group/livescanneraudio

Please post all links and sites to this group.

Thanks and happy scanning.

616. Trunk Tracking and the DPS, Battery Replacement - Scout 40

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-10-07 03:48:58 UTC
From: geraldwjamesjr@msn.com
Topic: 616 Message: 616

I am getting ready for the cumbersome task of reprogramming my trunk tracker. Since I travel from Houston to Nacogdoches and Houston to Lake Charles, La. on a weekly basis. I will be programming the frequencies for the appropriate counties. I will obviously want to include the DPS trunked frequencies and talk groups.
As usual, I will be analyzing Myles's list to make sure I haven't missed anything. (Thank you Myles) But... before I start punching on the keypad I will want to lay it all out in an organized manner.
Here's my question... Does anyone have DPS and S.O. frequencies for the Houston and East Texas areas (other than the ones on Myles's list) ? If so would you mind sharing them.
I have been hearing fewer DPS transmissions these days. If anyone has some good pointers for scanning the DPS trunked frequencies or other info. Would you mind posting it.
One another matter... Does anyone own a Scout 40. I need to replacd the battery and am wondering if anyone has ever successfully replaced one. Since it's hard wired into the system board, I dont want to lose any of the system programming or otherwise harm the Scout. Instinct tells me to send it back to Optoelectronics for replacement. Should I just fork over the $100. to Optoelectronics or....?

Thank you,

Gerald James

as for the scout I have one- do they want a $100 for new battery installed??? Thats crazy! You
can probably order the pack from Opto and install yourself and save a lot.
If I remember right it looks like a cordless phone battery pack with 4 AA's side by side and
shrink wrapped and stuck down with double stick foam tape. I tried to find a phone battery pack
that matched that description on the shelves at various places but no such luck. The local Radio
shack store manager said he could special order a cordless pack that matched the description but
I had no time to wait. I needed my counter working yesterday. I bought some rechargable AA's
with solder tabs from RS and made my own and wrapped it with a few rounds of electrical tape.
Not much as it won't fit in the case. Then ran some small gauge stranded wire to the board for
power leads. Kinda crude but it did the trick and it was a little tighter fitting than the orig.
pack. What system programming are you talking about losing? Capture mode hit log? Reaction tune
settings? Something else?

618. RE: [HoustonScan] Trunk Tracking and the DPS, Battery Replacement - Scout 40

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-10-07 16:17:58 UTC
From: Karl Schwartz
Topic: 616 Message: 618

With DPS remember that many of the units use the State repeaters (159.210) rather than primary A or B. The Houston, TX City and Beaumont repeaters all use different PL tones. Also DPS has a repeater in Brazoria County (the old BCSO VHF repeater) as well as one in Ft Bend County (the old FBCSO VHF repeater). Also many of the DPS units in those counties have 800Mhz county radios. In addition, some of the DPS units in Harris County have 800Mhz radios as do some of them in Montgomery Co.

As you head East DPS units out that way also operate on the County VHF freqs and I have also heard DPS on the Beaumont PD UHF system.

Subject: [HoustonScan] Trunk Tracking and the DPS, Battery Replacement - Scout 40

I am getting ready for the cumbersome task of reprogramming my trunk tracker. Since I travel from Houston to Nacogdoches and Houston to Lake Charles, La. on a weekly basis. I will be programming the frequencies for the appropriate counties. I will obviously want to include the DPS trunked frequencies and talk groups.
As usual, I will be analyzing Myles's list to make sure I haven't missed anything. (Thank you Myles) But... before I start punching on the keypad I will want to lay it all out in an organized manner.
Here's my question... Does anyone have DPS and S.O. frequencies for the Houston and East Texas areas (other than the ones on Myles's list) ? If so would you mind sharing them.
I have been hearing fewer DPS transmissions these days. If anyone has some good pointers for scanning the DPS trunked frequencies or other info. Would you mind posting it.
One another matter... Does anyone own a Scout 40. I need to replacd the battery and am wondering if anyone has ever successfully replaced one. Since it's hard wired into the system board, I dont want to lose any of the system programming or otherwise harm the Scout. Instinct tells me to send it back to Optoelectronics for replacement. Should I just fork over the $100. to Optoelectronics or....?

Thank you,

Gerald James

Sly,
Thanks for the information about the Scout. As far as losing the programming, I wasn't sure what would happen if I disconnected the battery. I called Optoelectronics who told me they charged a minimum fee for checking out the Scout. I think I remember the fee was somewhere around $57.50 although I am not sure on this. I was expecting to pay around $30.00 or so for the battery plus a little shipping. Since my "beep" feature , quit working when it reaction tuned, I wanted them to do a check out. It was my understanding that the "minimum" would be charged whether or not they had to work on it.
In any event. Your comments are appreciated. I assume that since you didn't experience any problems with a loss of programming, I may have some luck in ordering the battery and replacing it myself. By the way, There is a company called Electrotex which stocks many electronic parts. If you have never heard of them, you may give them a try sometime. I have had some luck in the past in finding hard to find stuff. They have at least two locations in Houston.
Once again, Thank you.

Sincerely,

Gerald James

From: Myles Barkman
Topic: 620 Message: 620

Here's the latest findings from my visit to the Ren Fest last Sunday. I didn't do much listening so I don't have a lot of info as to specific use of freqs and the list may not have all active freqs indicated either.
If anyone else goes this season and finds out anything, please feel free to contribute.

Texas Renaissance Festival Frequencies
10/1/00
PL Frequency usage
151.625 heard before
151.655 heard before
151.685 *
151.715 heard before
151.745 heard before
151.895 *shop concessions-"Dragonslayer" Paul Groos WPCZ231 as "MIL"
151.925 heard before
151.955 *talk about money
154.515 maintenance, heard before
154.540 *Tx Ren Fest WPOB555 Bill Pendley
154.570 *P-ville?
154.600 custodial, heard before
141.3 154.800/155.970 Grimes Co. Sheriff's Office
154.950 *Grimes Co. Sheriff's Office-in park
136.5 158.790/154.115*Todd Mission Police (license EXPIRED-still use)

Karl,
Thank you for your comments regarding the trunking and the DPS. I will continue to monitor the old frequencies. I will program all of the SO trunked systems and try my luck. Thanks for the info on the DPS's use of Beaumont PD's UHF system. Without your mention on this, I may have overlooked it.
I wasn't sure about how many of the DPS transmissions are on the county systems. I guess that I must now get to work in organizing my list for programming.

Thank you,

Gerald James

As you head East DPS units out that way also operate on the County VHF freqs
and I have also heard DPS on the Beaumont PD UHF system.

DPS in Chambers County use the 800 system in Chambers County

"p-ville" is a group of food/beverage boothes out there owned by an individual. Scattered out
all over. Unless you work out there, you probably will never see or hear this word. It is not a
section in the park nor is the name on the boothes for you to see. I know the following boothes
are with "p-ville" German beer booth, German food booth, Spanish beer booth (near the Jousting
field) turkey leg booth, steak-on-a-stake and many others. I'll try to get a better list a
little later on.I can't remember if there is a pl or not on their freq
I'll also be heading out there myself at the end of the month

I didn't lose any info like hit log that I can remember. But I might suggest though that you
have everything ready to go. It is remotely possible if its disconnected (no bat) for several
days it might lose its hit log and other user set parameters. It won't loose any system
programming though. I haven't had any problem with my beep feature. My only gripe is the power
switch, you barely move it toward the off position while on and it cuts off. Slightest rub
against it (the power switch) in a downward motion and its off. I've been dissapointed many
times finding it off the whole time after sticking it in my shorts pocket trying to covertly nab
freqs.I wish they would design the switch set up and feature activation differently.

I've been listening to APBnews for a while now. At first I thought it was a scam, and set up my desktop scanner and compared it to HPD....nope, it's real allright, about a minute delay though. It is WAY too cool listening to LAPD live, or the accents in Chicago or New York!! :)

KEWL!!

Gonna have to take my rinky dink bearcat 40 channel up next weekend and check these out.

Had a little problem with some of the folks at the SCA camp, so we moved to another camp, and are now playing with the Celtic Highlanders. We have lots more room down there, and.....(gasp) ELECTRICITY!! :) I think we've found a new permenate home with the Highlanders, so we wont be back at booth 232 anymore. Not full time anyway. I'm gonna be playing the part of the "Captured Englishman" since the Celts hate the English, and want to kill them!! (My character is a Templar Knight) I'll be on display as a prisoner, during the parade each day. Maybe even get executed during the Highlander games at 1:30 and 3:30pm each day, on the Tournament field. I'll have to talk to Shadow about that one though....he's da boss.

Cougar!!

629. I-10 Sting

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-10-11 15:21:34 UTC
From: Mike Holland
Topic: 629 Message: 629

HPD is working the 18 wheeling sting on I-10 on Ch.8 460.225. They have a FOX unit up in the air spotting and ground units initiating violator contacts.

This is the segment of road where 18 wheelers can not drive in the fast lane.

Interesting to listen to.

630. [HoustonScan] I-10 Sting

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-10-11 18:50:35 UTC
From: Charles McCallister
Topic: 629 Message: 630

Also noticed two HPD patrol vehicles working in tandem just west of the Washington/Westcott exit on the westbound side traffic on the inner safety lane today at 1:30 p.m. but I didn't have a radar/laser detector with me so I wasn't sure what they were doing. FYI.

> 18 wheelers can not drive in the fast lane

Is this a new city ordinance? What number?

Thanks!

Charles

not sure what number it is. But the city has posted that on a certain strech of I-10 on the east side of town.

Charles,

Dont know the whole story but HPD at city halls urging (blessing) is doing a study on part of I-10 that forbids 18 wheelers from traveling on the left (fast lane). they are hoping traffic will improve and wrecks with commercial vehicles will subside... I am sure some others on the list can give exact specs of the study

From: msuggs@ix.netcom.com
Topic: 633 Message: 633

Hi,

Does anybody have the frequencies and talkgroups for Lifeflight and the freqs/groups that Lifeflight uses to communicate with ground contacts?

Thank you very much,
Marvin Suggs

634. Re: Lifeflight freqs/talkgroups needed

From: Mike Holland
Topic: 633 Message: 634

Lifeflight uses the Harris County System for Dispatch Communications. They are normally only on the Downtown site due the fact that they are always so high up in the air.

http://www.clarc.org/~kg5ai/freqs/harris_trunk.html

Ground Contacts are made on the following channels

154.280 - State Wide Mutual Aid
155.340 - HAHERN
888.5125 - I-Tac 2 Simplex or Repeater or called lifeflight on Pasadena Radio

8592 - MA-2 on the Harris County system
7888 - EM-OPS 1 on Pasadena Local System rebroadcasts 154.280. You can here both sides of this normally simplex channel due to the VHF antenna being so high up in the air.

128.850 is also used for Air Band Dispatch
123.025 is used for Helo to Helo Communications

Lifeflight has also been know to pop on Coast guard Channels also.

154.280.....see, someone already beat me to it!! :) I think this is the freq that we used to call Channel three....or four (been a long time! :). State wide sheriff dept. back channel.

Mike, do they really still use HAHERN? I only know of a couple ER's that still even have the equipment. Usually sits in the corner with dust covering the rotary dial!! :)

Oh....have you been to the Harris County dispatch lately?? Man oh Man!!....They are putting in big screen TV monitors that fit in the walls and making a comms room that will be completly dark except for screens. We stopped by a while back when I was riding on one of the units for school. The new dispatch center is gonna be AWSOME! If memory serves me correctly, I think they said they were going to be hooked into transstar, and be able to visually monitor a lot of the freeways. A guy was explaining it to me and showing me the room, when we got a call and had to leave.

I think I could dig that one up, if noone beats me to it! I'll look for it later this evening if noone else responds. Back in the early 80's when I was running with Harris County Emergency Corps, I had one of those old Motorolas in my car, the kind with the big box in the trunk and used crystals the size of a tic-tac box! The prob I had with listening to Lifeflight was that the desktop scanner wouldnt pick up the helicopter while it was on the ground. I used to have to run out to the car to listen to the whole thing.

GREAT! It's about time. One less lane they'll have to negotiate. Just having had an MVA with a 2 1/2 ton truck myself, I can certainly appreciate this line of thinking.

I'll look into this further and find out exactly what the situation is.

Thanks!

The bravest.com, apbnews.com, I think these sites are really cool! I tried to do a search for any other on-line scanners, but my search results come up with HUNDREDS of results for PC scanners, and something called a line scanner. Anyone have suggestions on search key words to find on-line police, fire, ems scanners that you can listen to on the computer?

Better yet, anyone know of a URL to a link site for this?

Another reason I like to listen to on-line scanners, is that I use juno e-mail (but not as an ISP) and while I'm using mail, my ISP senses that my internet connection is idle, and keeps disconnecting me. Having a scanner running, minimized, keeps the connection active, and allows me to deal with large amounts of mail without having to bounce back to "web mode" and change pages every 10 mins, to keep from being bumped from the connection.

From: ems.cougar@juno.com
Topic: 640 Message: 640

Hey gang!,

I DID find a free ISP that DOES NOT use floating banners or pummel you with advertising. I've been using it for two weeks now, and am very happy with it. It works exactly the same way as a paid service as far as I can tell. Unlimited usage, access, etc....

I even have it set for Yahoo to be the start page. The only down part is that sometimes I have to attempt a log on several times, but closing the program and re-starting it seems to work just fine.

The URL to D/L the access software is http://www.bigguppy.com

I cancelled my paid service, and have not noticed much of a difference save for the lack of an internet "bill."

This is not intended to be spam, I just wanted to pass it along to help any of ya'll that might be looking for a way to trim those monthly expenses. If I find any major downfalls later down the road, I'll pass that info along also, but so far, it has worked out great! The guy here, who used to use freewwweb as a back-up to his DSL, before they were bought by JUNO, might want to check this one out.

647. radio shack card getting ridiculous

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-10-13 02:50:18 UTC
From: Sly
Topic: 647 Message: 647

Sorry for maybe being slightly off topic but since RS sells a lot of scanners and many of us have RS credit cards I feel it is of worthiness to post.

Boy, I read my latest new credit card agreement that came with my bill and this Hurley state bank is getting crazy! (Which issues the RS credit card)
First off the interest is going up again (up to might as well say a whopping 24%, actually 23.85%) for "best" rate. That's ludicrous. I feel sorry for the people with the standard rate (28%) .
Also now they will charge you a $5 charge in the form of interest if you pay your bill at any place other than mailing it in to the address on the bill. I guess this means paying your bill at the store is out now.
Looks like if I buy anything on credit again at RS I'll use a visa/mc.
And yes I have a RS gold card with a perfect payment history on top of that.
Sly

Hello all i heard there was a police chase in South Central (460.550) does anyone have any info? Also watching FOX 26 morning news i heard there was a chemical leak at the Rhodia plant near Manchester/San Saba Near JR Harris Elem. We will be headed that way to dop my sister off at school near by so i will get a good view. I will let everyone know

And I thought this was a sting just to add to the cities pockets by writing tickets.
I was on I-10 (east freeway) west bound last night and saw one sign and it was not lit up so it
could be seen.
Just my two cents

I think the truck restriction applies between 0600 and 2000 Hrs Monday thru Friday . So I guess they didn't see the need for lighting, And besides it only a "test".

PhulesAu,

> What's so great about it?

I knew my statement would get this type of reaction from someone.

You obviously have not been involved with a vehicle larger than the one you drive. I'd prefer the SUVs off the road, too, but then again I'm biased: I'd like to survive any accident.

> they should make the cars stay out of the left
> lane... and see how the accident rate is reduced.

That's absurd!

> Remember if you have a truck brought it.

Huh?

I'll presume you drive an 18-wheeler and have to make a living that way. Well, you'll just have to get used to increased regulation and stricter enforcement as a way of life. Road Rage is a continuing threat to vehicle operators and I don't see anything but an increase in this type of behavior. Better yet, have you seen the brush guards on some of these 1/4-ton trucks lately. Looks like a battering ram!

It's GREAT that our legislators have come to realize the dangers in driving today. And you may want to consider that I am generally for smaller government and less intrusion but some times our lawmakers do get things right for a change.

Sly,

> Hurley state bank

A paper bank in Las Vegas, NV created only to involve themselves in the selling of credit. Don't trust them as far as you can throw them. Pay off your entire balance per the same-as-cash terms and cancel the account after each purchase. I do this with the Best Buy credit company, too.

> Looks like if I buy anything on credit again at RS I'll use a visa/mc.

Unless RS offers a six months same-as-cash offer. Use this but cancel afterward.

From: Myles Barkman
Topic: 662 Message: 662

Sorry if you receive this more than once. This won't be long.
I just updated my amateur radio repeater listings for Texas, D/FW, and Houston.
I am temporarily putting them on a different server than the rest of my web pages.
If you go to http://www.clarc.org/~kg5ai/freqs/freqs.html , you will get to a page that should automatically take you to the updated lists.
Don't save any bookmarks to the pages at w5ac.tamu.edu because as soon as I can FTP the lists back to clarc.org, I will stop using w5ac.tamu.edu.
Sorry for this confusion, it's no picnic for me either.
Anyway, enjoy the lists and PLEASE, send me any corrections, additions, or deletions. Pay particular attention to any repeater listing that has "(check)" at the end. These will eventually be deleted if I don't hear anything about them or I can't confirm them.

Thanks and happy listening...

Gee, I really thought I saw the end of this little tiff.
Guess what, I don't care where anyone lives and I'm not going to make threats.
What I DO know is what everyone's email address is on here and my finger is on the big red button-and that's a promise.
Go ahead.....make my day!
Stick to the subject, guys. Keep unrelated topics and personal problems off this list.
We're here to talk about radio communications in the Houston area.
There's over 130 people subscribed to this list to do just that and they are of all walks of life and all ages.
There's appropriate things to say and inappropriate things to say. I don't want to have a moderated list so I leave it up to you good people to know the difference.
Let's have fun with our hobby.

Thanks to everyone who answered my request for Lifeflight freqs and talkgroups, I really appreciate it! And thanks to Myles for compiling and posting such a thorough list of Houston frequencies on his website. After recently buying my first Trucktracker, it's so cool to be able hear all the services again, just like the old days!

Hey, has anyone else noticed all the lowband skip lately? If you search between 33.42 and 33.98, you can pick up all sorts of FD communications from the Northeast, especially in the morning. Those folks sure talk funny!

Take care and happy scanning,
Marvin Suggs

Hey guys Be Careful when buying MOT Radios. They need to be of a certain type and configuration to be used properly.

IF STX'x - needs to be STX 821 or have been flashed to be able to receive certain channels that the county now uses. Back last Nov. the county started using certain channels that old type STX's could not handle. Be Careful.

Spectra - Any all even conventional can be used if you have the right software.

MTX8000 - Get a B5 or B7. These work vewry well and have the same controller board as the MTS2000's that most agencies use. Will need to modify the software to be able to use these radios.

Mike

they rare type 1 controller boards. i have 2 that im keeping for myself they have type 2 controller boards. the type one radios receive well but since hc switched their system they have a couple split freqs that transmit on trunking and you will miss those transmissions when the system catches one of the split channels. its not that annoying to listen to when the split channel hits all u hear is static..
i am trying to get type 2 controller boards that will solve the problem and of course add to the PRICE.....

What kind? (HT/??) I'm keeping an eye out for a few, but have to call the guy at the radio shop before I buy, to make sure he can hook them up to work on his tower. He's gonna hook me up with unlimited airtime, for 25 bucks per radio per month. Damn nextel wants 50 for radio useage alone!! :PPPP on them! :)

I don't need them yet, so....is this a limited supply, or do you get them on a regular basis?

Hey myles,

I took my scanner this weekend, and put in most of the frequencies you posted. I could not hear the people talking TO the dragon slayer, but could hear THEM. I think they are the central suppy or something.....sounded like they were filling orders from shops running out of merchendise. Was able to hear most of the law enforcement, but none of the medics. It's Alliance Ambulance thats out there. Charlie is usually in charge, I stop by and chat with him sometimes, but I dont think he would know thier frequency numbers exactly.

Over all, it was pretty cool listening in, I would listen while sitting in camp out back, between shows. Stomach pains, cardiac probs (people calling for the medics), a few shoplifters, people playing with unsheathed swords, a car wreck, usual stuff. I still have NO idea why in the world someone notifies the front gate that a train is coming.....well, I guess it blocks incoming traffic, and they can take a break....I dunno! :) Thanks for the post, listening was interesting!

Hey Marvin, I used to live in Houston Tx., Also a member of Cypress Creek VFD/EMS... Now I live in Lebanon County PA. I used to pick up Cypress Creek VFD up here until they went to the new UHF freqs. It was neat being able to hear calls from home. You might be able to here my Fire Dept down there. Lebanon County uses 33.9000 for dispatch (callsign is KGH770) 33.7400 for response/cmd, 33.7800 fireground 1, 33.9400 fireground 2..... Let me know if you hear us down there....
take care,

Subject: [HoustonScan] Lifeflight freqs

Thanks to everyone who answered my request for Lifeflight freqs and talkgroups, I really appreciate it! And thanks to Myles for compiling and posting such a thorough list of Houston frequencies on his website. After recently buying my first Trucktracker, it's so cool to be able hear all the services again, just like the old days!

Hey, has anyone else noticed all the lowband skip lately? If you search between 33.42 and 33.98, you can pick up all sorts of FD communications from the Northeast, especially in the morning. Those folks sure talk funny!

Take care and happy scanning,
Marvin Suggs

NO,I do not HAVE to make a living driving a truck. and if you would bother to read the Little green book of regulations. You will find that the trucking industry is already one of the most heavily regulated. and what my hand meant to type was " If you have It , a truck brought it . and as with all things the government does , they still can't enforce common sense. I've got a little over
a Million mile with no accidents,in a big truck . so I think I might know what I'm talking about.... Thanks for letting me vent.

Question ! Now that harris county has started using the smart-net system ...can you monitor all the channels by entering them into one bank? or does each system (Downtown, Clodine, ect.) have to have it's own bank? I entered all the channels into one bank , but I'm still missing transmissions .....

Thanks
Brett

Topic: 687 Message: 688

Interesting.....
Just enter the downtown system unless you are on the outer edges of town, say past Beltway 8. All the communications are on the downtown site whereas only the groups talking in the area of the outlying towers will be heard on the outlying towers. I use the Baytown site since I am only interested what goes on in the Eastern part of the county.

The Harris County system is so busy you will miss conversations as long as you are scanning through the talkgroups. This happens even with a Motorola radio unless you have one talkgroup set as priority.

I'm in the far west area... I'm only 5 miles from the clodine site.... I just purchased a standard GX5800T it doesn't miss nothing... but my radio shack scanner does.. I just wasn't sure if the downtown data channel would let the scanner know if one of the other towers channels were active... I'm assumming it doesn't... but I thought I would ask to make sure ... just in case i'm doing something wrong ....also I can't figure out DPS ... do they use different channels for different parts of houston ? I also heard they have an 800 channel now...on the HC System ...

The Alief system is an EDACS system. When the Bid request came out it was asking for EDACS handhelds and mobiles. Their Control channels is an edacs control channel and it trackable by trunker. I have it at 100% signal strength @ Westheimer and the Belt.

EDACS is APCO-16 Compliant just like smartnet and smartzone. Apco 25 is a digital system like what the state of michigan put in.

FYI:

Northwest EMS, Tomball Texas

Currently operating on Freq's 159.840 / 152.990 - PL 192.8 as there Primary Public Safety Dispatch. This pair shows up on the Pending Database under file# A061082, WPQH864 and is listed as an IG. Also WPQH864 shows up on the WTB Land Mobile Database under there name with a different pair 157.530 / 152.270 But still an IG.

Is this Ok for a Public Safety entity to be operating Dispatch on a Business pair? They have stopped using there there former Primary of 155.160 for this new channel.

Speaking of the show, There is someone who usually assists Alliance Ambulance with the EMS coverage at the show each year, and there is a good possibility he may be lurking on this list. I'd like to find him as I havent seen him in eight years.

Open letter to Ed James, EMT-P, ex Police officer, ex Harris County Emergency Corps.

Hey guy! Charlie, at Alliance told me a couple years ago that you do the EMS at the airshow with them each year. I bought thier old unit 402 put in a new engine, transmission and A/C and now run Trans-Star EMS out of my house. I'd really like to get in touch with you. Call me some time.

707. Wings Over Houston y2k

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-10-22 00:30:09 UTC
From: B Compere
Topic: 707 Message: 707

Went to the airshow today. Most of the info that I was going to post (amateur radios) was posted earlier. But, here are some frequencies gleaned while being wind-blown on the flight line:

Air Boss 119.600
Concessions 464,550 DPL 245
Parking (?) 464.500 PL 91.5
Show Discrete (?) 123.150
TX NGd (State Gd?) 143.475/500
EMS 163.4875
Fire 173.5875
HPD (Channel 8) 460.225
HPD (Hobby) 453.900
Confederate Air Force Used FRS, 6 and/or 8 airplane parking ops
Wireless Microphone 171.045
Civil Air Patrol Cadets 154.600
Just about everyone else FRS, mainly ch 2 and 3
Various users 154.570, 151.625

All went well, even though the cloud cover caused most acts to do their "low shows". But, it didn't start to rain until the air show ended and just about everyone had left the airfield. There was only one emergency that I observed. An EMS call in the parking lot after the airshow. All went fairly smooth, although the EMS and Fire Crews from both the Air National Guard and Houston Fire Department/EMS had to fight both oncoming and enroute (exiting) traffic. Good work by the Police Officers and Sheriff Deputies.

For those of you planning on attending Sunday, hope it doesn't rain. And, just wait for the fireworks to explode (Hint: Take ear protection. I forgot mine).

708. ADAR

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-10-22 22:41:56 UTC
From: scasko@aol.com
Topic: 708 Message: 708

My computer completley crashed, physical damage to the hard drive. Lost everything I had on it, every program, bookmark, etc. Taught me a lot about backup.

Anyway, what I'm trying to do is re-locate a program I used every day called "ADAR." It stands for "All DAy Audio Recorder" and it is a really great program. Records off a scanner (or anything) through your soundcard and converts it directly into a .wav file. Only records when there is audio, so you have nice compact files when you get home to check them. If anyone knows where the site is that I can download this from I would appreciate it.

Since I'm rebuilding from scratch, anything else you'd like to send would be appreciated also. I'm basically soliciting donations....

Thanks
Steve

I dont have any neat scanning programs...but did happen to get a program D/L'd from Germany. Its called "Oscar 2000" and "Keys and Serials." Not sure how to use them, but they are SUPPOSED to be able to unlock time locked demos and expand the full version, also the other one has a database of working serial numbers and product key codes to help install programs that you lost the code to. If anyone is interested, I could dig up the URL of where I got them.

Also....What brand of Hard drive do you have? I bought one from a pawn shop once, and it went bad after a year. I called SeaGate, the manufactuer, and gave them the serial number....turned out that it had a 5 year warranty from the factory. I got a return authorization #, and they sent me a brand new one. Of course it was a 10 week turn around, but I had a back-up H/D I used till it got here. You might want to check that route out...youd have a spare H/D when it came in, anyway.

From: Thomas.McBarron@enron.com
Topic: 45 Message: 711

I believe we must all use discretion when making posts - especially about law enforcement operations which may be in progress. Not only are you endangering the operation but peoples lives.

Yes, information gleamed from the scanner is public knowledge but by making information from the scanner public knowledge as by posting possible DEA operations greatly increases the individual's liability if something "were to go wrong."

I would hope in the future Houston Scan members will use more discretion.

712. Programming instructions?

Anyone headed to the Tx Renaissance Fest. this Sunday? I'll be there (with family) unless the weather is just really bad. I'll have my scanner and such. I'll have FRS capabilities with me if anyone wants to eyeball or to swap monitoring notes (TRF stuff that is) You can find me on FRS ch. 7 (primary) with a pl of 88.5 or on ch 13 (back up) with same pl. Gotta run pl-too much frs activity for open squelch mode at this place.

If anyone has recently been and has updated info would you post it? I got the list Myles put out a few weeks ago.

Sly

723. new stuff

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-11-04 23:05:46 UTC
From: Myles Barkman
Topic: 723 Message: 723

Was poking around on the FCC database today and noticed several things of interest:

Shoreacres PD seems to have given up their application for 453.1125 and settled for 460.5375 MHz.

There is a TX DOT low band repeater licensed in the northwest part of the county on 47.120 with input on 45.760 MHz. It is located, as far as I can tell, near the intersection of Huffmeister and Spring Cypress.

The LCRA seems to be making a presence into Southeast Texas. They have frequencies licensed in Bryan on 936.200, 938.200, 938.925, and 939.9625 MHz. The LCRA has many EDACS trunked systems scattered across the Austin area along the Colorado River. Some of their talkgroups are networked across the system so you can hear people that may be many counties away. They also have a couple of frequencies in Magnolia: 936.9125 and 938.1625 MHz. Anyone in the Tomball area that can track 900 MHz EDACS systems might plug these in and see what they can hear.

I noticed a repeater licensed for Fort Bend County Fire on 151.220 MHz. Is this an old, obsolete repeater or something still in use?

UTMB Galveston Police is licensed for a repeater on 867.275 MHz. Has anyone heard this or have any info on it? I've heard them using 460.250 MHz.

I finally heard Bayshore Medical Center security on 461.775 MHz in Pasadena. I only live a mile from there but for some reason, never happened to hear them on here. Now if I could just find the Target's security freq.

I'm looking for anyone that might know specifics on the Cleveland Police radio system. It seems as though their repeater does not transmit PL. This would mean that all the patrol cars must listen to the repeater using carrier-operated-squelch. This means they would be picking up all sorts of possible agencies when the band opens, which is regularly does. Does anyone know if this is really the case with Cleveland?

It sounds like Pasadena FD has started using ITAC 2-866.5125 MHz for making contact with Lifeflight instead of using 154.280 MHz. Does anyone know why they stopped using VHF? It was easier for me to hear them on the trunk system relay on 7888 anyway since I can't scan trunked and conventional together.

Well, I gotta go to a party. Yes, I do rarely get out of the house! Try to stay dry this weekend.

myles was at utmb when they were testing there system for 800, it will be a conventional system with one repeater and with recievers in almost every major building. when i asked they wouldnt tell me how many frequencies they were installing but they didnt deny a 3 freq system. this will not be related to the galveston trunked system but will be totally independent of it, as they have a connect to that system already.
for your information i have but havent confirmed it yet the Alta loma city trunk connects you might want to check out--- channel 1 is 54554 and channel 2 is 54576----- i have more iam checking on but will keep you informed as i get more.
regards
sandyj sandyj@...

P.S any more on the bayshore hospital system will be appreciated thank you

This seems to be the new standard.
ITAC-2, Direct mode for LifeFlight is being used by many agencies in the Greater Harris County area. Ft Bend County, W I-10, WHCEMS, and Westlake VFD/EMS have been using this for at least a year. It may also be used by Katy VFD/EMS. Just recently 800 MHz antennae have been appearing on their EMS vehicles.

From what I heard on the scanner from a combo of Seabrook, LakeAcres PD and Laporte.

The Suspect was driving down Kirby rd at high speeds and running people off of the road. There was another guy following him. From what the dispatchers were saying, they went Kirby to Redbluff. Redbluff to 146. 146 to Shoracres RD with speeds reaching 100+. They then went shoreacres RD to old 146 and then pulled into an apartment complex where the suspect pulled a gun and started shooting at the guy who was following him and then the SWAT situation insued.

Freqs:

453.425 Seabrook
155.625 LaPorte
453.825 Shoreacres? Lakeacres? sounded like 2 defferent departments.

155.625 LaPorte
453.825 Shoreacres? Lakeacres? sounded like 2 defferent departments.

Lakeview PD holds the licence for 453.815 and provide contract dispatch service for Shoreacres PD.

I actually was dispatching today when all that mess dropped. There were other factors involved.

Mike

Forgot to add this earlier:

Additionally, this is a direct frequency, not a repeater/trunked
transmission. Therefore, it is less susceptible to interference
and "busys" on the trunked systems. Plus, not all agencies in the
area have the same Mutual Aid/Fire/EMS talkgroups and systems:
Motorola vs EDACS are not compatable, but all have the ITAC
frequencies. Hope this helps...

730. SW Lynx System access

Here is the list of sites that I received from Ted Harwood W5WTX. As you may notice this was before he had added Houston to the list. The Houston site is 443.825 pl 103.5. It is on the Saltgrass link system. I'll send an e-mail on that also. When Steve has them all linked up, it does not matter which freq of the saltgrass you are on, you will be able to get into the southwest lynx.

From: Kevin R.
Topic: 732 Message: 732

Here is the information on the Saltgrass Link System. The repeater that is linked to the Southwest Lynx system is the 443.825 machine which is located in downtown Houston. But since these machines are sometimes linked together, you will be able to talk on the Southwest Lynx without being on the 825 machine. Normally it seems that the Houston, Woodlands, New Waverly, Clute and Bazoria are linked together most of the time. If you have any question on this system contact Steve at WB5UGT@... and he will be able to fill you in on all the details. Also he has a 6 and 10 meter link on this system that he turns on sometimes.

Hope this helps

Kevin R. KD5LMI

Saltgrass Link System
443.825+ 103.5 Hou
442.700+ 162.2 Woodlands

Thanx for the info. I haven't heard anything yet. I did notice that the election officials were using cell phones when I voted today.

737. Deer Park police freqs?

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-11-08 07:19:11 UTC
From: Tim Hoven
Topic: 737 Message: 737

Can anyone help me with the deer park police freqs? The freqs I used to use, and have found on the net will not work anymore(154.100, 155.190). And for whatever reason I can't program 154.7920, 158.9325, 155.0025 into my Pro-2004 Radio shack scanner. When i finish putting in those freqs and upon hitting the enter key, those freqs round to 154.7900, 158.9300, and 155.000. Wonder whats up with that? I don't think I can change the step/mode for this range?

Thanks for any help,
Tim

On my 2006 I use 12.5 step and get the freq as close as possible. I have no problem hearing them. Thier companing on their radios sounds awful. I have a Motorola M1225 in my office with Deer Park in it and they sound bad.

From: B Compere
Topic: 739 Message: 739

Today, I spoke with a Katy paramedic that although he had his Kenwood handheld with him, he also had another radio. Should I say it? OK, I will, "Nextel". Yes, they are using the little radio/mobile phones. Not for everything, the mobiles are still necessary, but, from fireman/fireman, paramedic/paramedic, and to the hospitals, they are becoming more prevelant. This frees the mobiles for fighting fires and taking care of most dispatches that all need t hear. Administrative and direct contact transmissions are over the Nextels. As an example, the EMS has attachments for the phones so they can send data from the ambulance to the emergency room at Katy Community Hospital. Plus, they have the Emergency Room's direct line programmed onto the Nextels so they can communicate directly with the doctor. They can also talk directly with the Flight Nurses on LifeFlight.

On another note, they are beginning to move away (as the budge allows) from their Kenwood radios to Motorola radios that are safer to use in hazardous (read: explosive) environments.

Bulletin Update at 1150 while report being written, and almost as I was preparing to press "Send", Channel 13 advised that the missing juvenile has been found and is being brought to the command center...

As I write this, the Harris County Sheriff's Department, including the Air Search and Rescue Team, K-9 units, Mounted Officers, along with Constable Precinct 5 Parks Division, the West I-10 Fire Department, West Harris County EMS, the Westlake Fire/EMS, the News Media, especially KHOU-11's helicopter, Houston Police Helicopters, and countless volunteers are searching the northwest corner of George Bush Park/Barker Reservoir for a teenager who apparently became disoriented and was caught by the storm that came through the Houston Area last night. Also, airboats from an unknown department are being used to patrol Buffalo Bayou and several streams in the reservoir area.

For those wishing to monitor the action these are the talkgroups/frequencies being used:

TAC-4 (all) 12848
HCSD Patrol Spv 9328
HCSD Dispatch 4 9008
HCSD Detectives 9104
HCSD Mobile Cmd Post 10896
Constable 5 D2 Parks 16720
Constable 5 Spv 1808
Constable 5 Disp 11504

Helicoptors 123.025
West Houston Arpt 123.050

Houston PD Ch 8 460.225

KHOU Helicopter 450.5125

Possibles, but not monitored:

Commissioner Pct 3 8784
13360
13136

In scanner, but not heard:

Corps of Engineers 163.4125
163.4375

Update:

The juvenile was picked up in the park by an airboat, most likely Commissioner Pct 3, and was transported by West Harris County EMS to a Katy area hospital.

WHCEMS 15792

Also at scene was Katy ISD police:

1136

I was not near enough to determine if GMRS/FRS or business band radios were used during the search. It is also possible that the Commissioner Pct 3 units may, and I stress, may, have used VHF radios on the airboats. I have seen their older vehicles with VHF antennae installed. They used to be on High Band and may have some old (unlicensed? or itinerant business band?) equipment still in some older units. (Or, they never disconnected the antennae from the vehicles.)

Topic: 746 Message: 746

As most of you know, I have not been talking much. Today, after much thought, I surrendered my license for Trans-Star EMS to the State of Texas today. WW and I have decided to work for Personal Care EMS for $10 per hour. We hope to save up enough to regain our license at a later date. This was a very hard decision, becuse both of us have worked so very hard at building Trans-Star EMS. WE still hold the name and the DBA...but we are no longer Trans-Star.

I, at this time ask for prayers for our revival in the future, but there are MANY things we must learn before trying to bring Trans-Star up again. I know that many of you wish to start your own businesses. My prayers are with you, Fortunatly Jan and I have acquired EMS jobs starting at 10 bucks an hour. We hope to save enough to put Trans-Star back on the map, but it may take a while.

In the intrim, I offer my prayers to yourselves, your businesses, and hope that our prayers are answered as well

Good luck to all, and God be with you.

Hope this helps - Rusty

This is a little lengthy but please bear with me, Here Goes....

The Codes that you hear are from a list of Call Type / PT Status Determinant's from a Nationally recognized / Used Medical Prioritizing Dispatch System. The Dispatch Centers and Dispatchers are all nationally certified and accredited in this program. It is used by almost all of the Non-HFD EMS agencies around the area and others both Municipal and volunteer throughout the country. It is a quick and reliable way to relay information to the medics. The list is made up of 32 call types, with each having a severity code (A-D) and status type (Usually 1-6). (i.e. 10D03 (Ten Delta Three) - 10-Chest Pains / Cardiac, D-Delta / Critical Response, 03-Pale, Sweaty, Changing Color)

Below is the list as used by Cy-Creek EMS. It may vary from agency to agency but the 32 primary remain the same.

1 - ABDOMINAL PAIN/PROBLEMS 20 - HEAT/COLD EXPOSURE
2 - ALLERGIES/HIVES/MED REAC/STING 21 - HEMORRHAGE/LACERATIONS
3 - ANIMAL BITES/ATTACKS 22 - INDUSTRIAL/MACHINERY
ACCIDENTS
4 - ASSAULT/RAPE 23 -
OVERDOSE/INGESTION/POISONING
5 - BACK PAIN (NON-TRAUMATIC) 24 - PREGNANCY/CHILDBIRTH
6 - BREATHING PROBLEMS 25 - PSYCHIATRIC/SUICIDE ATTEMPT
7 - BURNS/EXPLOSIONS 26 - SICK PERSON
8 - CARBON MONOXIDE/INHALATION/HAZ 27 - STAB/GUNSHOT WOUND
9 - CARDIAC/RESPIRATORY ARREST 28 - STROKE/CVA
10 - CHEST PAIN 29 - TRAFFIC ACCIDENTS
11 - CHOKING 30 - TRAUMATIC INJURIES
(SPECIFIC)
12 - CONVULSIONS/SEIZURES 31 - UNCONSCIOUS/FAINTING
13 - DIABETIC PROBLEMS 32 - UNKNOWN PROBLEM/MAN DOWN
14 - DROWNING/DIVING ACCIDENT
15 - ELECTROCUTION

16 - EYE PROBLEMS/INJURIES
17 - FALLS/BACK INJURIES(TRAUMATIC)
18 - HEADACHE
19 - HEART PROBLEMS

The following are exerps from the What is ProQA / MPDS article found at this link.
http://www.medicalpriority.com/articles/whatis.html

For more Info you can also go the there Home page at:
http://www.medicalpriority.com

What is MPDST?

At the core of ProQA (Software integrated into the CAD) is the Medical Priority Dispatch System (MPDS). The MPDS has been developed and refined over the last two decades under the direction of Jeff J. Clawson, M.D. The MPDS Emergency Medical Dispatcher (EMD) protocols are supported and continually validated by a scientific, international body of medical experts.

The MPDS is simple, yet complete. It includes Chief Complaint/incident type protocols which help EMDs quickly obtain vital information about patient status and scene conditions. The EMD then uses this information to send the appropriate response configuration as determined by local medical and EMS control. The MPDS also includes DLS treatment sequence protocols covering arrest, choking, and childbirth. These protocols enable a trained and certified EMD to assist the caller in immediately helping the patient

How ProQA and the MPDS Work

As an EMD using ProQA and the MPDS, your first step with every incoming call is Case Entry (equivalent to the field responder's primary survey). In Case Entry you verify the location and callback number for the incident, and then determine the patient's age, status of consciousness, status of breathing, and Chief Complaint (the Four Commandments of emergency medical dispatching). If you receive information that the patient is unconscious and not breathing (for any reason), before continuing with any further interrogation or instructions, you immediately send a maximal response.

After Case Entry, your next task is to complete the Key Questions from the appropriate protocol (determined from the Chief Complaint). The Key Questions are equivalent to the field responder's secondary survey. They provide you with a more orderly and much closer view of the patient so the pre-hospital care provided is appropriate and in keeping with the severity of the injury or illness.

ProQA then takes the information obtained through Case Entry and the Key Questions and automatically determines the appropriate dispatch determinant code. Your task is to dispatch the response configuration (emergency vehicles and mode of response) assigned to the code.

There seems to be a new Dispatch Console at HCSD. From what I've heard the past week, Central Tac seems to have become Central Dispatch, treating the area inside the City of Houston as another district. So, there now seem to be 4 Patrol Districts for unincorporated Harris County and one District for inside Houston.

Trunktracker code 14896

This is a week later, so I'm sure your question has ben answered several times,....but what the heck, I feel like typing right now!! :)

10 codes vary as much as accents. You really have to know what the agency is using.

I remember way back in the Harris County Emergency days.....there for a while we went to secret 10 codes because of all the wrecker drivers and un authorized medics scanning our frequency. We carried a laminated card on the unit to decipher it.

For example, we used to say something like "shots fired, man down, S.O. on scene, Haverstock Hill Apts, Medic three show you enroute.

After the cards, you would hear....Medic 3, 1043 Haverstock Hill, 1041 affirmative, show you in route, 23:42.

Now.....alphabet codes vary too, but usually between Fire/EMS and Law Emforcement.
For example.....fire/ems:
A=alpha
B=bravo
C=charlie

Law Enforcement:
A=adam
B=boy
C=charles

Hope this helps a little anyway.

756. Trans-Star EMS update

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-11-20 01:49:24 UTC
From: ems.cougar@juno.com
Topic: 756 Message: 756

I started my day at Personal Care EMS on Friday, I think it was. Jan starts monday. I was able to talk to Dodie for a bit too. She is not the "Owner" of Personal Care, but she's the highest up. You see, Personal Care is a corporation, and there is a board of directors she has to get approval from, to do certain things.

She is going to ask the BOD what they can do to help Trans-Star EMS come back up.

Our first thought was that she would buy a percentage of Trans-Star, (enough to spiffy the ambulance up, get us several sets of uniforms, and some operating capital.) Then her company would divert ambulance calls to us, which we would run, and write up on OUR runsheets. Personal Care does their own in-house billing, and they would do our billing too....(this would also insure I wasnt holding back on income from dodie too:) And dodie would take a percentage of the monies collected. ALSO since we would be a sister company, and an actual "part" of Personal Care EMS, thier Physcian Medical Director would cover Trans-Star as well. Due to recent law changes ALL services, even BLS must have Physician medical Direction by the end of December.

I have been SO worried about this, because I spent WEEKS writing the BLS medical Protocols for Trans-Star. The STATE accepted them, and licensed us with MY signature as the Medical Director. They did this because BLS is really nothing but glorified first aid. But now that Texas EMT's are allowed to use epinephrine, albuteral AND use an automatic electronic defibrillator, a Physician must now be involved.....and they charge about 1,500.00 per month, to sign your protocols. With OUR call volume being so low, we would have had to shut down anyway. I REALLY hope Dodie can help us. Last year, she won an award for businesswomen in the black community by billing out 1.8 million dollars, using only 5 ambulances and 23 employees. A proposal will be put on the table at Personal Care's board of director's meeting late next month.

As I said, I spoke with Dodie, who is the CEO, and her right hand girl, they liked the idea.
In the meantime, she is giving my wife and I combined, a total of 20.00 per hour to use one of her ambulances, and transport her patients.

Ya know, it's really funny, but...three years ago, if someone offered me a job, at 10 bucks an hour plus benifits, I would have jumped for joy. Right now, I feel like a CEO who has been busted down to the mailroom.!! :(

Well, hopefully Personal Care will take Trans-Star under it's wing next month, and really teach us how to run a business. Until then.....we be

jus regualr 'ol street medics again!! :) :)

760. Re: [HoustonScan] Digest Number 204

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-11-20 03:22:09 UTC
From: Brett Shell
Topic: 747 Message: 760

Hello Cougar,
Our prayers are with you and your wife in regards to your company. Being an small business owner myself,,I understand the hardships one encounters when being in business for ones self.... Also being an X EMT and Fire Fighter I can understand the struggle that you face ... Medics and Fire Fighters are mostly under-paid unless you luck out and get an government job..Most of us did it "well because, It's in our blood" I finally gave it up for better money (I sold out) . I have many friends who I envy because they do what they love .... I do miss it..... I have drove and owned a Towing Service for the past 17 years,and after reading your post I have to admit you struck a nerve.....You feel it was improper for "Wrecker Drivers" to monitor ambulances ? I have helped medics extricate MVA victims more than I want to remember, I have put my life on the line, without hesitation hundreds of times....assisted police, sheriffs,ems,fire fighters, just to name a few...I have caught a escaped TDC convict , 3 armed robbers, multiple DWI's from FSGI's , not to mention the numerous officers I have assisted when their arrest turned bad, which i believe would have resulted in serious injury to those officers .... I learned long ago the secret .... Don't involve yourself till your asked ....but be there ...that's important !!! Just by sitting across the street, can be enough .I have been a witness to assaults against police officers, which results in days of court appearances without pay. Streets today are very different!when an public officer calls for help ... he usually recieves it within minutes.... 5-10 years ago... It sometimes took 10-20 min. One night 10 years ago I heard an sherriff go out on traffic on the fort bend county line... I started to roll that way ... 5 min into the stop he would not answer the dispatcher... When I arrived he had been fighting an mentally ill man 100 plus pounds his weight... his exact words words as I got out of my truck " Brett (pant pant pant) Hel.... Thats all I needed to hear, I was safe and got on the officers radio and called an assit (this was in the convert-a-com days ...he had left his car w/out his radio) I then spent the next 20 min fighting this man before the nearest unit could make it... The 3 of us finally got him handcuffed..... All from listening to a device we call a scanner ....There are some bad drivers out there, but I can give you names of officers, medics and fire fighters who are grateful I was listening that day.....Sorry if I went on to long... I just like people to know the good side of things .....

PS .. I to was with HCEC I know all about the codes in the griffin days (smile) fought him too :-)

Thanks
Brett Shell

Bret, your reply was The most action on this list since I've subcribed. I don't know about the others but, NO APOLOGIES NEEDED HERE. Although I must admit your only the 2nd wrecker driver/owner I've ever met and liked. That job seems to bring out a different side of people ..... because of the way some drivers are payed I think.

2 sense worth,
Tim

In my last post, I did not mean to offend any wrecker driver. The people who ran the emergency corps were always bitching about them and didnt speak very highly of them behind thier backs. It was the Emergency corps that had the prob with wreckers, not I.
I was simply listing it as one of the reasons I was told that we had to use that stupid 10 code that they made up. Personally, I enjoyed 17 wreckers showing up for an accident at night. All the lights going made me feel.....well, it's a pretty cool feeling and gets the adrenalin <sp?> going. For some reason, the corps. hated them.

I got in trouble more than once, for running unauthorized first responses, simply because I was very close to where the incident occured. I FACT.....once, I got suspended for 6 months for overridding a ParaGods decision AFTER the ambulance left, I called in HFD to check a little boy who was woozy and had some blood in his ear.

Anyhoo, I didnt mean to personally offend, I liked the wrecker drivers and most of the first-outs! :) I loved the Emergency corps, but beleive me, there were times when we butted horns!!.....errr....claws, in "my" case.

770. Unusual Virus

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-11-23 01:33:18 UTC
From: ems.cougar@juno.com
Topic: 770 Message: 770

I do not usually send out warnings about viruses, but a computer friend in the northern US, says she got hit with it, and it wiped out her hard drive (I trust her ability as an experienced puter user). It IS an EXECUTABLE file (big red flag there) but it is called Navidad.exe

And it comes as an attachment. Dont open it. Also remember that executable files come with a multitude of extensions....so be careful, this is one of the biggest seasons for virus manifestations, and virus hoaxes.

Nuff said,

Cougar!!

Yea me too, I've heard it both ways, there seems to be more talk about arriving in Dec than Jan. I'll believe it when I see it. Still not sure if I want to rush out and get as soon as they come out or take a wait and see what all the "beta testers" have to say about it first. Sounds like most of the on-line and mail order places may be already backordered past their initial arrival allotment. I too am satisified with the 92/2067 series radio, conv is great, trunking is decent, I do miss some of the trunking features found on the uniden models though. While it does have some short comings on trunking, all the other bell and whistles far outweight the minor negatives. I use mine for 800 mhz trunk tracking/multi tracking 90% of the time and am satisfied. Would I buy another one if I had to? Yes.

Well, Ya'll prolly won't find my organization listed anymore.....I surrendered the license a little over 2 weeks ago. I'm not sure how long it takes for them to pull "Trans-Star EMS" off the list. But we have a savings account open and are making pretty good money working for Personal Care EMS. As soon as the bills are level, I'll come up with a figure that will be the amount needed to run Trans-Star EMS for 6 months. When I get that amount saved up, THEN I will re-up the State and City Licenses, and bring the company back online.

785. Funny thing?

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-11-30 03:48:05 UTC
From: ems.cougar@juno.com
Topic: 785 Message: 785

A Funny Thing <<?>> happened at work today.

Funny,.....If you look at it from afar.....If your close. it's not really funny.

After dropping a patient off at Memorial Dialysis today, I discovered that I had left the stretcher inside the facility. I went to go get the stretcher, and as I rounded a corner near the front door, I see another company's stretcher on its side on the sidewalk, and the patient was STILL buckeled to it!! Stretcher down, patient in flowerbed!!

I helped upright the stretcher after the crew unbuckled the patient, lowered it, and we lifted the patient back on to the stretcher. I felt SO sorry for the crew.....even though accidents DO happen, when they happen to YOU, you end up kicking yourself in the butt WAY more than you should. Was it a preventable accident? Yes, was it purposeful, No.

The stretcher's wheel came off the sidewalk an a corner of the stretcher fell down enough to throw the thing completly off balance, the stretcher fell sideways with the patient on top,....wrenching the knee of one of the medics, on the way down. YA GOTTA watch those wheels while transversing sidewalks!!

I explained to the wife of the patient that accidents happen, it's just like driving on the freeway, you never wreck un purpose, but eventually, it's gonna happen to each and everyone of us.

The girl who got the wrenched knee said....."No, this is mister "so and so",.....we're gonna be in trouble for this one!"

Of course a full assessment was done once they got him in the back of the Ambulance, I don't know the outcome, other than the patient seemed un-hurt and only shaken up when we got him back on the stretcher.....but I feel SO SO bad for that crew.....Things like that have happened to myself, and I know the feeling, and the self torture you put yourself through.

Other than that, it was just a normal work day.....patient 1 goes from point A to B, and patient 2 goes from point B to point A....and so forth....

Huggs to all, be safe, and WATCH those sidewalks!!

The following is basicly a forwarded copy of something I sent to another list. Thought I might send it to ya'll too, hope there is not TOO many complaints!! :)

Cougar!!

>>>>>>>Start Forwarded Message <<<<<<<<<<<<<<<<

Click, or copy and paste the URL link below, after reading this. Dodie Moore is our "boss" right now, and her company, Personal Care EMS is who I am hoping to work out some sort of merger with, to add income to her company, and to save mine.

Trans-Star EMS has the SAME earning potential as Personal Care EMS, if I had the calls, and some key people in place.

Dodie (Edolia Moore) keeps wanting to talk to me about the merger, but we keep missing each other! She's off doing business, and I'm off taking care of patients for her, and our schedules have not allowed us to have time off, in the office, to talk. I'm off tomorrow, think I'll try to catch her at the office.

Just wanted to share her company's accomplishment, and show OUR potential too!! :)

788. !!! 780XLT Available 2nd week of December!!!

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-11-30 14:42:34 UTC
From: Mike Holland
Topic: 774 Message: 788

This is Taken from Rich Wells' Strong Signals site

http://www.strongsignals.net

I've been receiving a lot of e-mail regarding the BC780XLT. Some have said that it's good to go and others have stated that the radio has been delayed due to QC problems. Given all that I decided to get the word straight from the horse's mouth and have just gotten off the phone with a Uniden representative (and this is NOT a customer service rep or some tech down in the lab)
Uniden says that the BC780XLT has had no QC problems and that they are currently being shipped over to the US. Once here they will be trucked to the warehouse (most likley in Fort Worth) and then out to dealers and distributors. If all goes well, Uniden says that the BC780XLTs will arrive at dealers sometime in the 2nd week of December!

When I asked about the possibility of a handheld version of the 780, I was told it is "being considered" and that it would have "additional features" like "digital items." Sounds good to me!

There you have it! The latest and greatest, courtesy of Strong Signals!

It's not Houston Engine One, it's West I-10 Fire Department (Fire District 48), Katy, TX, Engine One. However, there have been times that HFD units from west Houston have been dispatched mutual aid to the area, and vice-versa.

Greetings;

Speaking of fire engines ... in the downtown area I see (or used to see - not working downtown anymore) ladder truck number 8 with the "eight-ball" flag on top screaming up and down the downtown streets like a drag queen on Montrose.

My question: were those guys responding to persons trapped in stuck elevators or were they just doing some sort of daily joy-ride?

Regards,
Rick

HFD Station 8, south side of downtown. Some stations have been allowed to personalize their stations, if appropriate, and approved. Station 8 is one of the few, with a flag, since it is one of the oldest. The next time you see a pumper or a ladder truck, take note of the name on the front. Previously, all you saw was the station number, e,g., E-51, L-2, etc. Now, you see the name of their assigned neighborhood area written under the windshield, e.g., Dairy Ashford, Galleria.

Upon a request, I've added a couple of more options to my Houston area
Frequency list found at http://www.clarc.org/~kg5ai/freqs/freqs.html.
You now have the option of retrieving just the frequency order list, the
agency order list, or the entire list. There is nothing different about the
information in the lists, just the way they are sorted.
So now you have a choice in case you only want to get one list or the other,
you don't have to get the whole thing.
Don't be surprised, though, when I may update the entire list and not update
either of the other two lists at the same time. I cut-and-paste these by
hand so just watch the dates and see if they are the most recent.

suspect now being transported by so dist 4 units back to houston, ben taub hospital with unknown injuries.
also as reported earlier officer was not taken to herman by life flight, he wasnt found soon enough for ems 2 make a difference. he was aparently putting the suspect in custady or was in custady and thats when something bad happened. possibly the 2nd suspect ambushed the deputy, killed the deputy and freed the 1st suspect...only one suspect in custady at this time, one still atlarge

I rode out of Station 8 once, for "student time" while attending Houston Community College EMS course.

It was REALLY cool. Didnt get to see anything "really" exciting,....a hit on the head from a beer bottle, kid gets shot in calf, sick call at the Star of Hope Womens Center, various sick calls in the wards, and Willie Spivey.....the proverbial "town drunk," who was passed out at a bus stop. My favorite part was sliding down the brass pole when a call came in. It went through the floor, and had "valves" that opened up in response to your weight on the pole, and you slid through the floor to the back of the ambulance. Being 2 feet away from a pumper truck, as it lights up, roars to life, thundering its horns, and sliding past you like a cruise liner departing for an unknown destination, is quite an awsome experience. The flags were the icing on the cake!! "Keepers of the Wards" it read, underneath an "eight" ball. <sigh> the feeling I got, being a part of it that night....was indescribable.

From: Dwayne Jones
Topic: 799 Message: 799

Does anyone know what frequencies that the mics in the mobile video systems in the patrol cars use? This would be the cordless that the officer wears and would transmit back to the car.
Dwayne

Found a dps trooper one time on (can't remember for sure) 170.245 or 169.505. He had someone
pulled over and was talking to them. A good area to check for wireless mics is between 169-174.
There are several specific freqs but just don't have them handy. But it is not the only area to
find them. One area is 49.8 to 49.9 mhz, you'll find the el cheapo systems here. Another popular
area is from 174 mhz on up to just around 220mhz, usually these are wideband mics here.

I've heard this many times but either forgot or never figured out how to determine what lane of a road they are talking about when they say the car is "in the number x lane". Is this counting left to right or right to left? I suppose it is standard or am I assuming too much.

In my experience it's left-to-right (in a given direction), i.e., lane
#1 is the fast lane.

807. blue angles and thunderbird flight scheds for next year

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-12-08 23:35:12 UTC
From: Sandyj
Topic: 807 Message: 807

No. 726-00 De: sandyj (703)695-0192(media) IMMEDIATE RELEASE December 7, 2000 (703)697-5737(public/industry) BLUE ANGELS, THUNDERBIRDS SET 2001 AIR SHOW SCHEDULES The "Blue Angels" Navy flight demonstration squadron and the "Thunderbirds" Air Force air demonstration squadron have announced their 2001 show season schedules. The Blue Angels will begin their season on March 10, 2001, at Naval Air Facility, El Centro, Calif., and will finish on Nov. 10, 2001, at Naval Air Station, Pensacola, Fla. The Blue Angels have scheduled 66 shows at 34 locations in the United States and Canada during the 2001 season. The "Thunderbirds" are set to begin their season March 24 at Patrick Air Force Base, Fla. The team will perform more than 60 shows in 29 states and will visit the Pacific for the first time since 1994. The Navy flight demonstration squadron is a Chief of Naval Air Training unit composed of Navy and Marine Corps representatives including ten pilots (six are demonstration pilots), six support officers, four civilians and about 100 enlisted personnel performing in more than 16 Navy specialties. The team's home base is Naval Air Station, Pensacola, Fla. The Air Force air demonstration squadron is an Air Combat Command unit composed of eight pilots (including six demonstration pilots), four support officers, four civilians and about 120 enlisted airmen performing in more than 25 Air Force specialties. They are based at Nellis Air Force Base, Nev. Each team's aerial demonstration is a mix of formation flying and solo routines. The pilots perform approximately 30 maneuvers in a demonstration. The entire show, including ground and air, runs about one hour and 15 minutes. Demonstration sites are selected to support the objectives of the Defense Department and the interest of the armed Services with safety as the primary consideration. Performances greatly assist the recruiting and retention goals of the military Services, enhance esprit de corps among uniformed men and women, and demonstrate the professional skills and capabilities of the armed forces to the American public and U.S. allies. The Blue Angels schedule for 2001 is as follows: Jan. 2 - Mar. 9: Pre-season training at Naval Air Facility, El Centro, Calif. March 10: Opening Show, Naval Air Facility, El Centro, Calif. March 17-18: Mesa, Ariz. March 24-25: Altus Air Force Base, Okla. March 31-April 1: Marine Corps Air Station, Cherry Point, N.C. April 7-8: MacDill Air Force Base, Fla. April 21-22: Naval Air Station, Corpus Christi, Texas April 28-29: Naval Air Station, Norfolk, Va. May 12-13: Peoria, Ill. May 19: Charleston Air Force Base, S.C. May 23: United States Naval Academy, Annapolis, Md. May 25: United States Naval Academy Graduation Fly-by May 26-27: Naval Air Station, Patuxent River, Md. June 2-3: Naval Air Facility, Lakehurst, N.J. June 9-10: Quebec, Canada June 16-17: Syracuse, N.Y. June 23-24: Davenport, Iowa June 30-July 1: Evansville, Ind. July 7-8: Muskegon, Mich. July 13-14: Pensacola Beach, Fla. July 21-22: Bozeman, Mont. July 28-29: Naval Air Station, Lemoore, Calif. August 4-5: Seattle, Wash. August 18-19: Kansas City, Mo. August 25-26: Duluth, Minn. Sept. 1-3: Cleveland, Ohio Sept. 8-9: Naval Air Station, Willow Grove, Pa. Sept. 15-16: Smyrna, Tenn. Sept. 22-23: Naval Air Station, Brunswick, Maine Sept. 29: Naval Air Station, Meridian, Miss. Oct. 6-7: San Francisco, Calif. Oct. 13-14: Marine Corps Air Station, Miramar, Calif. Oct. 20-21: Alliance Field, Fort Worth, Texas Oct. 27-28: Lafayette, La. Nov. 3-4: Jacksonville Beach, Fla. Nov. 9-10: Naval Air Station, Pensacola, Fla. More information about the Blue Angels is available on line at http://www.blueangels.navy.mil/ . The Thunderbirds schedule for 2001 is as follows: March 24: Patrick Air Force Base, Fla. March 25: Tyndall Air Force Base, Fla. March 31: Glendale, Ariz. April 1: Glendale, Ariz. April 7: Naval Air Station, Point Mugu, Calif. April 8:

Beale Air Force Base, Calif. April 21: Barksdale Air Force Base, La. April 22: Maxwell Air Force Base, Ala. April 28-29: Lincoln Air National Guard Base, Neb. May 5-6: Ft. Lauderdale, Fla. May 12: Millington, Tenn. May 13: Fort Smith, Ark. May 19-20: Andrews Air Force Base, Md. May 26-27: Columbia, Mo. May 30: United States Air Force Academy, Colo. June 2-3: Naval Air Station Fallon, Nev. June 9: Hill Air Force Base, Utah June 10: Cannon Air Force Base, N.M. June 16-17: McChord Air Force Base, Wash. June 23-24: Tullahoma, Tenn. June 30: Scott Air Force Base, Ill. July 1: Niagara Falls, N.Y. July 4: Battle Creek, Mich. July 7-8: Pope Air Force Base, N.C. July 14: Columbus Air Force Base, Miss. July 15: San Angelo, Texas July 21-22: Dayton, Ohio July 25: Cheyenne, Wyo. July 28-29: Latrobe, Pa. Aug. 4-5: Otis Air National Guard Base, Mass. Aug. 11: Minot Air Force Base, N.D. Aug. 12: Ellsworth Air Force Base, S.D. Aug. 18-19: Chicago, Ill. Aug. 25-26: Mid-season break Sept. 1-3: Bay St. Louis, Miss. Sept. 8: Muskogee, Okla. Why can't we get these teams back to the Wings Over Houston show?

They offered to return if their schedule would permit. We would have had to move our schedule to the last weekend in October to accomodate them but it was a move we were ok with. I saw their schedule on the list last night and I notice that they scheduled a different show so that means unless something happens where one of the shows cancels they will not be here.
We have discussed other teams coming and continue to do so. Maybe some other teams like the Snowbirds or thr Red Arrows again. It's an ongoing process through out the year and plans are usually changed several times before the show.

810. Are Harris County Constables on a digitally trunked system?

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-12-09 22:04:11 UTC
From: dsg987@hotmail.com
Topic: 810 Message: 810

I was just about to purchase a BC 245xlt trunktracker but I looked at he bearcat trunktracker site and they indicate that harris county uses a Type II Astro Digital system. If this is true then there is no way to monitor them! If not are they switching to digital?

Would someone be able to tell me if we have a digital system in harris county or is the bearcat site wrong?

I am most interested in monitoring Precinct 4 constables in the Klein area.

Thanks for any info.

Dan

Ok....I am in the CAF (Confederate Air Force) and here is the information on the military demo teams. With Hobby being so close to Ellington the airspaces sometimes interfer with each other during days when Hobby has its landing pattern close to Ellington. Most of the military teams require at least a 10 mile radius to perform their shows and at the time we can't guarantee that we will have the 10 miles the days that they are here. We are currently working with Hobby and the City of Houston to get a guarantee for the 10 miles needed no matter what the wind or other factors are doing. At the time we are really close to getting that agreement signed so within in the next year or two we should see the return of some of the military demo teams! We are also trying to get an international team like the Brazilians or someone from Europe to come over and give us one of their demos eventually.

the bearcat site is wrong The Harris County sys. is a analog system smart zone site and will not be going to digital for a long time since the system in Harris county is fairly New.

That's like asking which is better, Ford or Chevrolet.

I have both the Uniden 245 and the Radio Shack PRO-92 A. (Make sure it's the 92A and not plain 92). I am happier with the PRO-92 than the Uniden because I can program the 92 with software from Radio Shack. It's cost an extra $75.00 but worth it. Both radios work equal as far as I am concerned with each having a bell or whistle that the other may or may not have. The 92 weights a bit more and is a bit larger. I think the 92 has a better battery options with the ability of using NiMH or Ni Cad's or regular AA's. You are also given an extra battery case so you can use rechargeable and keep the regular AA's for a backup pack. I have used the 92 on Montgomery EDACS and the Harris County Zone and it works well on both.

I would suggest you get the Radio Shack, use it for the 30 days of the return guarantee period and then make up your mind. If it works for you, keep it.

817. winter weather

Not too nasty yet, but seems to be a colder winter this time around than normal. Anyone hear any sanding ops yet? Got any freqs to listen in on?

Got my 2004 searching the range 47.020 to 47.400 MHz. Was stopping on the 47.140 repeater on the Baytown bridge earlier with squealing.
Maybe some of our neighbors to the north are hearing something.

Much of TxDot's ops in the DFW and Austin areas are on 900 MHz trunked systems. Only trunked ops I'm aware of are on HCSO TG 17552.

On another note, have heard a couple of more TG on HCSO system that are new to me: 18096 and 18288. 18288 sounded like it could have been related to some parking garage ops.

From: ems.cougar@juno.com
Topic: 821 Message: 821

About 9:30pm, I went to Dairy Queen to get a couple footlong hot dogs and after that I stopped by the corner store to get a pack of cigarettes. As I was leaving the store a small white car pulled up and two black guys got out one went to the payphone on the north edge of the store, the other went in the front door and the driver pulled around the side, got out and opened the doors to the car and stood there. I had caught eye contact with the one that went to the phone, he was eyeballing me, probablly because I was wearing my Law Enforcement jacket, and a big gold badge. The two outside were looking ALL around as if scanning. I saw all of this because instead of turning right, out of the lot towards home, I turned left into the left hand turn light and sat at a red light watching. They saw me watching and piled in the car and came out of the lot and got in the line of cars behind me. When the light turned I sped up the road and got in another left hand turn lane to go into a grocery store parking lot. Here they came, I couldnt go because there was a lot of traffic in front of me, they pulled up right behind me. I prepared to duck down and was watching in the mirror waiting to see a gun. Traffic cleared and it went across into the parking lot and turned right and headed north across the lot. The other car parked and a guy got out. WHEW I though, that means they were only going in my direction. I exited the north side of the lot onto willowbend, took an immediate right and went back southbound on S. post oak, back towards the store where I had first seen them. Bingo.....there they were, waiting to fall in behind me again. For some reason, instead of continuing on, I jerked the car to the right, cut in front of them, back into the parking lot almost hitting thier car. I hauled ass across the lot to the front door of the foodarama, jumped out and ran inside to find the security guard. I had looked over my shoulder while running in and had seen them coming backwards across the lot. The guard went out and checked for me, and they were gone. I went back to the little store and told them what had happened so they could watch out, went home and called the police. The officer came over and I sat outside and described it to him. he seemed very interested, and hurried off, saying that if they did that at that store, they were prolly going to try it somewhere else.

My nerves are shot, I cant sleep, and I'm still shaking. I was out there alone, with no way to call anyone, without my ballistic vest, and unarmed. I dont know why it is still affecting me as if it just happened, but I can still feel my heart racing. The bad thing about is....I cant prove it happened. No one saw it but me, not even the security officer, the guys left before he got out there. All I can do is say what I saw, and how I was chased, and describe it as a small 4 door vehicle, white in color, containing three black males, one with an untucked large pattern plad <sp?> shirt and a stocking cap on his head and that the vehicle had a Jack in the Box clown ball on the antenna.

Well, Cougar...I thought it was pretty interesting,
even if this kid thinks different. Get a life, Josh.
Lighten up. (The big scanner in the sky is watching
us)

Topic: 821 Message: 826

Thank you.....I needed some "back up" on that one.

When one gets thrown in the position that I was in,....listening to the scanners and talking to to people here about how things go down in this city, and hearing how the trained police officers deal with the situation, really helped me deal with the situation last night.

I didnt "freak out" and ran to the nearest lighted public place. Maybe this person who responded so negativly to my post, will someday be in a simillar situation, and maybe something I said will hit him, and save his life.

Cougar!!

830. last night

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-12-17 15:45:03 UTC
From: Marvin Suggs
Topic: 830 Message: 830

Hi Cougar,
I don't know if you have a cellphone or not, but you can get one really cheap (under $20) and the 9-11 stays activated on it wheather you have an active account or not. I carried one for several years, hooked to a lighter plug in my truck and I'll called 911 on several occasions and it works!

Really cheap insurance for piece of mind!

Take care,
Marvin

831. HFD Squads

Yahoo group: HoustonScan (1999 — 2002)

From: Marvin Suggs
Topic: 831 Message: 831

I was listening to EMS dispatch calls to Squad 9, 3 and 46. Does anyone know what these units are? I saw on the news that they were planning on putting medics in Suburbans to speed resonse times. Has this happened yet?

Take care,
Marvin

Yes Houston Fire Dept has started the squad program. It is usually a paramedic and a driver. The idea is that the squad will respond to a medical call with a basic ambulance. Sometimes the squad gets on scene first and then not. If the call is BS, the squad will go back in service and the basic ambulance crew will transport the pt. If the call warrants a paramedic then he/she will ride on the box, the driver will take the suburban back to the station. What I haven't figured out is why they are still dispatching a pumper on ambulance calls that already have a squad in route to it or why they dispatch out a medic,squad, and a pumper from the same station to the same call. I think they ought to leave those brand new pumpers in the station on medical calls unless it is a code are something.

833. Re: [HoustonScan] HFD Squads

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-12-17 23:14:35 UTC
From: geraldwjamesjr
Topic: 831 Message: 833

Regarding your question. Why do they dispatch a pumper and an ambulance. Often from the same station.
I could be totally off base on this, but I seem to remember that several years ago, incident occurred whereby a patient died when an ambulance didn't reach the destination. I can't remember the circumstances but I remember reading something in the paper about establishing a new policy for critical situations. I think this is when they started dispatching more than one emergency vehicle in cases where a patient is unconscious.
I agree with your view on leaving those new pumpers in the station. I think the bottom line is a shortage of ambulance$. If the pumpers are the "backup" (I assume that pumper crews must stay with their pumpers in the event of being called to a fire), the trained pumper crews are a good "short stop". Maybe the fire department deems this the best way to get use from their equipment and manpower. It's beyond me. In base ball, short stops are small, quick and lean. It doesn't seem economically feasible in that it must cost a small fortune just to crank up one of those monster pumpers.
I am not complaining about the pumpers being sent as backup. Saving a human life is more important than our municipal budget. I know that our fire department must have a good reason for the dual dispatches. Maybe these new squads are the answer.
I don't know if my answer is on track or not. I am anxious to know the "real" reason for this. If anyone knows, I'll be waiting to see.

Happy Holidays to All,

GWJJ

No one needs to "get a life". The post was correct. This thread has NOTHING to do with scanning Houston. Although your story was interesting Cougar, let's keep our posts to scanning. I do not want to hear about your personal life unless it is directly related to scanning.

835. Weird FRS...

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-12-18 20:34:08 UTC
From: albertorea@webtv.net
Topic: 835 Message: 835

I just came back from the local Wal-Mart in Pasadena (off shaver) and had my KF310 and put it on scan i heard a paging tone THen i heard someone say"are you there?" I hit stop and heard a distant voice say "what is your location?" He said "i'm at the wal-mart." Then he said "he's here i saw him go in." So then when the other person arrived they started to talk in "cop" jumble. My question is why would a "security" person use FRS beside cost. But i don't even think they had a code it was just CH 1 462.5625 sounded pretty interesting untill they said "were at main &Southmore" but we drove back home and it kept crackling off.

Hey Cougar,
Houston PD uses two-way radios, to the best of my
knowledge, don't they? Just a question.

840. Weird BC760xlt problem

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-12-19 04:40:17 UTC
From: cmad99@texas.net
Topic: 840 Message: 840

Ever since I turned it on straight out of the box, nothing would show up on the display screen, just the orange backlight. It would not receive. Then one day, POOF!, it worked. I programmed it and installed it in my vehicle. Then I would turn it on, just the backlight again.

The weird thing is that when it would get extremely cold outside, the scanner would work. I would have to leave it on after a cold spell. I've since brought it inside the house. The only way I can get it to scan is to place it in the freezer for a couple of minutes, remove it and....majic! It will work.

Has anyone heard of this problem or know of a fix? It's already out of warranty and I've since purchased a much better Relm scanner.

Sounds like maybe a thermal intermittant component or a connector with some dust or maybe even a
cold solder joint that just now showing up. Get you a can of freeze-it spray and pop off the
covers, turn it on until its messing up again and start spraying suspected components and when
it comes to life, bingo! You found the trouble spot!

Just one more example of a business "breaking the rules" for FRS use. Of course it is probably not all their fault, that is unless every radio package contains the FCC rules for use. They need to realize that unlike business, the general public only has the FRS frequencies set aside for their use (expect for the new Multi-use Radio Service). I guess it just comes down to the fact that the FRS radios are cheaper and they (the business) do not have to deal with keeping a licensee current with the FCC.

On a related note, I don't know many are aware of the new Multi-use Radio Service (MURS). They are 5 frequencies that use to be part of the "dot" radio band. The radios are limited to 2 watts ERP and may have an external antenna. The FCC also did not prohibit the use of repeaters or state what type of transmissions may be used. So packet or Slow-Scan TV or any other types may eventually be heard. This band may turn into a VHF "cb band" because of the all the loop holes in the rules. We will just have to wait and see.
Here are the 5 frequencies:
151.820
151.880
151.940
154.570
154.600
So if you have one of the old "dot" radios, check what freq. it is on and you may be able to use it. Or if you have a ham radio that has been opened up, put it below 2 watts and talk away.
For information http://www.provide.net/~prsg/murshome.htm

There is NO rule that prohibits the use of FRS radios for business purposes.

Yea I've already heard activity in the new murs band. Got a nearby apt. complex personel using them. 151.820.
Are the new murs freqs going to be tagged with a "colored dot"?

Cough....spit.....choke.... ahem.....

err.....Thank you. hehehheh. Of course I hope I didnt start a spat or anything. I've been off line for several days, that's why I'm just now seeing this.

I didnt know that the subject was off topic. I have promised the moderator that I would try and refrain from posts such as that in the future. I'm not used to lists that have such strict guidelines, but I can certainly accept the fact that my post might have been off topic. With that said, my apologies to those offended by the post, and I will be more thoughtful in the future. Nuff said.

I do not have the info you're requesting because I lost all the info on my old hard drive, bought a new system and am still working on getting the info compiled again. BUT..I do remember that I did a "Yahoo" search using the words "live scanners" as search criteria and got a WHOLE lot of info. Including something about Lackland and San Antinio area. It was info on a list of sites. Also, right off the top of my head, there is http://www.apbnews.com They have live police broadcast for San Antonio Police. It is a sattelite feed with about a minute delay. Hope this helps,

Cougar!!

Yes it's a transceiver. It's a Motorola Maxtrac
800mhz trunking radio. It has four or five groups
programmed into it. We broke squelch on two of the
groups (keyed the mic and got squelch tail returned).

You might check the book stores for a line of instructional books called "<insert subject here> for Dummies" It started out back in the early 90's as "DOS for Dummies" and I learned a LOT from that book. Since then, they have published the book line on a very wide array of subjects, using different authors. You might want to inquire at a book store, if they have one on the subect you are looking for.

Never owned a trunking scanner. I'm going to buy one
soon, as soon as I find one that will scan all the
different types of systems.

859. Houston FD?

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-12-30 05:55:23 UTC
From: Myles Barkman
Topic: 859 Message: 859

Yesterday evening, heard something that caught my ear. A strong signal on 153.890 MHz kept keying up which sounded like someone at a base radio keying up like they were testing it. I never heard anyone talk, and I never heard any data bursts on it. I thought it could have been the input to one of the fire department repeaters around here. I found a PL on the signal of 127.3 Hz which at first made me think that the user could be La Porte FD, but they aren't licensed for that freq. But Houston FD is. I wasn't around here when HFD was using VHF for their primary comms but they use PL 127.3 Hz now for their UHF comms. I think I've seen reference in some OLD lists that they used that PL on VHF.
The only VHF freqs that I am aware of HFD using are 154.160 MHz as a pager and possibly 154.280 MHz for mutual aid. I've noticed that HFD is licensed for 154.310 MHz at many of their stations. Does anyone know what HFD might be using 153.890 and 154.310 for or any other VHF freqs?

860. West I-10 VFD & NW EMS

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-12-29 13:49:35 UTC
From: CHARLES LANCASTER
Topic: 860 Message: 860

I have 2 questions:

1) What are the current system and frequencies used by West I-10 VFD?

2) What is the current system and frequencies used by Northwest (Rural) EMS in Tomball.

Thanks, Charlie

861. which scanner?

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-12-30 13:38:57 UTC
From: Mike,Ann and Ashley too
Topic: 861 Message: 861

I am new to HoustonScan so I hope I am not asking a stupid question as far as this group is concerned but I need to replace my scanners. Two got trashed in a lightning strike(one is probably repairable) and my handheld was stolen by a person I thought was a friend!!
I am handicapped, unemployed, and get by on a limited income with a lot of expenses. So I need to know from those with more knowledge of what is out there in Houston:

1) Is it worth it to get a Trunk Tracking Scanner

2) Does anyone know if the Houston PD and FD will be moving onto the Trunk Network in the city or will they stay in the 460MHz band

3) Is it worth listening to those services on the trunk network since I am mostly concerned with the railroads, aircraft, police/law enforcement/fire protection activity in my part of Houston-Northwest Houston, between 34th and 43rd Streets and Ella and TC Jester BLVDs.

It would probably take me a year to save up for a Trunk Tracker scanner, even a used one. I just want a scanner right now that will fit my needs immediately(and not kill my bank accout-about $100 is tops for what I can spend). Can anyone suggest a source of used, decent quality scanners to fit my needs, and perhaps later, the Trunk Tracker when/if I have the money?
Thank you all for your time and assistance.
73 and good listening
Mike Edelson KA2SPH/5

862. Re: [HoustonScan] which scanner?

Topic: 861 Message: 862

Dear Mike,
In answer to some of your questions. You are correct in wanting a trunking scanner as much in our area has been moved to trunked systems. HOWEVER, I still use my 460.mHz scanner twice as much as my trunk tracker. Maybe it's just me, but I like to listen to HPD. Coincidently, my office is not far from your location. (North Sheperd, near 43rd/Crosstimbers) The substation for this area has been moved farther north to West Montgomery Street near Gulf Bank, but is often referred to as "North Shepherd" instead of "North" or "North Command". The old tower is still up in the 4700 Block of North Shepherd. Much of the stuff in your area (the neat stuff, that is) can be heard on a 460. If you choose to go this route, try to get one that will pick up (418-420). Your area is not far from the FBI, FCC, State of Texas Highway Patrol, and DEA. All are in the general vicinity of Loop 610 and Hwy 290 Northwest Frwy. Living close to this area isn't necessarily an advantage other than it is pretty much, in close proximity to the center of our city.
Frequencies in this area and the above mentioned agencies can be found on Myles' list. If you haven't yet visited, go to---- http://www.clarc.org/~kg5ai/freqs/freqs.html also known as The Frequency Zone. This is the most up-to-date and informative listing for our area. Once you visit this site, you'll need no other. Thank you Myles!
Regarding live scanner broadcasts, www.APBnew.com has live broadcast for Dallas. However, today, I failed to get it to work. I don't know if the problem is on my end. This site has worked for me in the past. Maybe it's a temporary thing.
By the way,....I just found out that the new "911 Dispatch Center" will be moving as soon as they finish their new larger (400 employees?) center. The new location will be in the 5300? Block of North Shepherd at the intersection of Donovan. Donovan is approximately 1/4 South of Tidwell and is across the street from Saint Pius High School. They have just finished demolishing an old "Globe" Store at this location and are making site preparations. At this point, I cannot tell how the big the building will be, but neighbors tell me it will be 4 above ground stories. I will keep all of you posted when things start to take shape.
I was told that the old 911 Dispatch Center has been out grown. The new place will be state of the art. This brings up and important question that all of us may be interested in. "When will Houston go "head first" into a full blown, trunking system? If this question can be answered, maybe the completion of this new facility will have something to do with the time frame. I really don't know.
Mike, you may already know about "live scanner broadcasts" on the net. If not, here are a few links of interest. Some of these sites have links which may be of interest. Such as, ----- http://www.crosswinds.net~scannernet this site has a link to Scanner Market Place which is suppose to have used scanners for sale.

On a personal note. I only have two scanners. One is a trunk tracker.
It's a hassle to program but worth the trouble. However, as I have said, I
still use my old 460 more than the trunker. The 460 is good for the Traffic
Watch Planes which fly around during peak hours. Since most of the Dispatch
stuff from HPD is still on 460 (some surveillance stuff and low power stuff
in 453,455,465) especially car chases, robbery APB's, etc.. I don't think I
will be putting it away for a long time.
I am sure that once some of the guys (and gals) on the egroup scanner
list see your posting. One may become available. If I ever am able to get
another scanner and decide to sell it. It will be posted on the list.

863. New 911 Dispatch Center, Helicopters Calibrating "towers"?

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-12-30 17:44:16 UTC
From: geraldwjamesjr@msn.com
Topic: 863 Message: 863

To whom it may concern,
Since my office is nearby, I stumbled across information of a new Harris County/HPD/HFD,etc. 911 Command Center which is to be built. I assume my information is correct but have no proof other than I received the information from a business owner adjacent to the construction site.
The site is located at the intersection of Donovan and North Shepherd. It is between Tidwell and Pinemont or approximately 3 miles north of loop 610.
This facility is supposed to employ 400 persons. As a business owner, I am happy that new folks will be in my area. It is situated on what looks to be a 20-25 acre site. For those who know the area, the now demolished building was a "Globe Store" in the 1960's and most recently the site of Metro Salvage/First Choice Auto Auction. The old buildings have been razed and the site is being prepared for the new structure. I hope they know this site has a reputation for Flooding every 4 or 5 years. I wonder.....!
At this time, there's not much else to mention on this. I may post more on this as things progress.
On another note.
A couple of weeks ago, I heard at least two helicopters communicating GPS Coordinates on HPD City Wide and Detective Channels. They were hovering around/above the "Transtar" tower(s). A few hours later, I heard communications by individuals preparing to "switch over" systems, shut down systems, fire up systems, etc. Considering all of this, I assume they helicopters were calibrating thier equipment in order to work with one or more new towers which were to be put into use. The helicopers were in the vicinity of 1-10 (west of 45, inside the loop) and the NW 610/290 areas. They were flying patterns in a direct line between unknown points.
All of this happend on the Friday (before Christmas). I hope this information is useful to someone. If anyone has any input, I'd be delighted in knowing what I was hearing.

Kindest regards and.... Happy New Year to all!

GWJJ

From: schwartz@netropolis.net
Topic: 865 Message: 865

Well, I broke down and bought a Bearcat 780 and now have a question on the best way to program it for the Harris County system. Since there are seven sites should I program each site into a separate bank, or, can I program several sites into 2 banks (since there are more than 50 freqs and just add the ID's to both banks? I am not sure that using 7 of the 10 banks for a single group is the smart thing to do. Anyone else have a 780 or another TT set up?

866. correction to earlier post

From: Myles Barkman
Topic: 866 Message: 866

OOPS. Didn't quite do my homework before blaming Conroe FD for their faulty trunk/VHF link on 154.190 MHz. I listened to it earlier and found the signal to have a PL of 118.8 Hz. Conroe uses 146.2 Hz.
So the offender happens to be La Marque FD's repeater linked to the Galveston County Motorola trunk system. I thought the control channel sounded strange for an EDACS control channel-because it was a Motorola control channel!
I wonder if this strange problem occurs every time the control channel is on 868.9125 MHz. It will be interesting to test that theory. I don't believe this is the case since I don't hear this "problem" that periodically.

You will need to program the main freqs in one bank and then it will have all the id's already programmed in. You will just have to listen and lockout any id's that you dont like.

Not yet having a 780, this is what I think you are asking. I assume we are talking about control channel only tracking.
You want to know if it is best to put each site's control channels in separate banks or put them all in one (or more).
I guess this depends on how you will be using the scanner. If you are going to be using it primarily in a base configuration, I would program in different banks. This, so I can select different sites, and ultimately some different talkgroups for each site.
But, if you anticipate using your scanner mobile and may be traveling in and out of range of the different sites, I may want to enter all the control channels into one bank so that no matter where I am, I will be tracking one of the systems. Problems may be the following in this case:
1. You may not easily see which site you are tracking at any given time. (if this matters to you)
2. In fringe areas, you may start going from site to site within seconds. (if you can't receive one site long enough, you are probably outside of Harris County anyway)
3. You may stop hearing activity on a TG when you change to another site. Not all TG are repeated on all sites. It depends on affiliation of receiving units for the TG in question. This is especially true with outlying agencies especially in regards to TAC groups and city services.

What people should realize and enjoy is the concept that with the 780, you no longer need to know and enter all voice frequencies associated with a Motorola trunk system (I don't think "control-channel-only" tracking applies to EDACS).

In the following, I'm discussing Motorola Type I/II/IIi systems:
For any given trunk system, there is a maximum of four possible control channels. If you figure out which four control channels are used for a particular system/site, then that's all you need to program for that system.
Now this bit of information I'm a little less confident about facts with:
As far as I know, when 2-ways are programmed to operate on a trunked radio system, the (up to) four control channels are "hard" programmed into the radio. I say "hard" programmed because this information cannot be changed unless the radio is actually hooked back up to a computer and reprogrammed.
I don't believe control channel programming can be changed over the air. So if the admins of a system wanted to change the freqs of their control channels, they would actually have to reprogram the entire fleet's radios by hand.
When the trunk system operators change the voice channels of the system they are using, the mobile radios don't care. The control channel tells the 2-ways what frequencies to change to. 2-ways don't need all possible voice channels programmed into them like our pioneering trunktrackers required.
The new Trunk Tracker III technology revolutionizes the way we have to

follow trunk systems.
There is a maximum 28 channels (voice and control) that a trunked system (site) can operate on at any given time. But Harris County is licensed for many more that 28 channels and on occasion, changes which frequencies it uses. If there were 30 or less possible frequencies involved, this would not be a problem for our earlier trunk trackers since we could just put them all in a bank and scan away. But we can't fit all possible freqs they can choose from so we are forced to pick the 30 most used from the pile.
Now, with the control channel only feature, even though there may be more than a pool of 28 frequencies that the downtown Houston HCSO trunk system has capability of using, we only need concern ourselves with four control channels (for the downtown system, two for each satellite system).

I'm in the process of ordering a 780 at this time. No word on when I'll get it or who I'll be ordering it from but youz guyz will be among the first to know.
I just hope it's on a Friday!

I got a 780 but don't live within range of harris co. What part of Harris co do you live in? Are
you trying to cram more than a hundred ids in it, the reason formore than one bank? I would only programm it for the nearest site but thats just me. The downtown site I thought rebroadcasts all hubs.
Are you going to be mobile all over Houston? the reason for needing to load up all systems? I would only stick one site per bank. There are no more than 30 channels per site if itlooks
like more then some are probably mdt's
Have you checked out Myles list?

870. Other area FD observations

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-12-30 17:31:07 UTC
From: Myles Barkman
Topic: 870 Message: 870

Conroe FD links their primary dispatch from their EDACS trunk system on their older VHF repeater of 154.190 MHz. A couple of times, as it is right now, I've noticed that there seems to be a glitch in some software that when the control channel of the trunk system changes, the VHF repeater starts spewing out a link from the control channel rather than the dispatch talkgroup. So if you happen to be searching through the VHF fire band and hear a trunking control signal on 154.190 MHz, it is not a new VHF trunking system. It is just good ole technology run amuck.

I tried to email this bit out sometime ago but my computer locked up as I was about to send it and I hadn't had the patience to resubmit it:
If you want to have a blast from the past, try listening to Seabrook VFD dispatch a call on 154.385 MHz. To dispatch the call, they tone out with some interesting tones, that some of you may remember from the 70's watching "Emergency!". They might be syndicating this on Nick too.
They dispatch with the familiar two-tone page for station 51, and include the claxon (klaxon?) sound at the end. The first time I heard this on the frequency, I thought it was a cute joke, but it seems to be the standard procedure. It sure gets your attention though.
There are several web pages around dedicated to information relating to the TV show, and include .wav files and factoids about the show.
It even talks about the dispatcher who never got in the credits and died just a couple of years ago or so.

Hey Guys Just some Info,

The Montgomery County Fire Dispatch Ch.1 (154.190 out / 154.385 in) is controlled directly by 4 wire PLPA accross a Mircowave from the Mont. Cty. 911 / Communications Building Through there Ericson / EDACS Dispatching Console. The "Hard Patch" between the VHF System and the 800 Talk group is done inside the dispatch console controller and is not a radio to radio link....

This is also the case for Fire 2 (154.250), Conroe FD ch.3, Mutual Aid (154.280) and EMS 1 (155.325).

Hope This Helps - Rusty

Kevin, thanks for the link. Perhaps due to my antenna (that I found for 12 bucks) I have trouble getting 800 mhz. I was looking to find a 154-155 mhz freq that Brazoria county also uses, much like Ft. Bend Co. does.
73's, Scot.

876. Boy do I feel stupid.....was Re: Harris County Trunked

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-01-03 04:45:23 UTC
From: cmcj@hal-pc.org
Topic: 865 Message: 876

I was ready to return my new Pro 92 (vers. "b") which I got for
Christmas until I read this thread.
After reading about all the problems owners of various Pro 92's have
had, I wonder if I we had made a bad purchase. I plugged in all of
the downtown freqs. in the Harris Co. trunked system and could hardly
hear anything. Then I read this thread and decided to try plugging in
the Tomball freqs. in the Harris Co. system. BINGO. I can hear
everything clear as a bell. (I live in northwest Harris Co.) Yes I
should have known better, but I thought I lived close enough to
downtown to get a good signal.
Just goes to show it is not the eqipment to blame, but operator error.

Thanks guys.
I really enjoy this group. Wish I had more to add to it.

Date: 2001-01-04 02:00:41 UTC
From: Myles Barkman
Topic: 530 Message: 880

Last info I have is:
33.920 FIRE West I-10 VFD tone out (simulcast of 855.9625
and HCSO 15728)
855.9625/810.9625*FIRE West I-10 VFD Ch.1 (paging,simulcast of
Dispatcher)
Primarily, their comms are on the Harris County trunked system TG 15728.
Not sure which sites are best to hear it on. I have heard them on the
downtown site but you may hear more activity on the Clodine site.

881. MURS radio band

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-01-04 02:21:09 UTC
From: Myles Barkman
Topic: 881 Message: 881

Just wanted to comment on something I read last month regarding using an amateur radio on MURS freqs.
Just because you decrease the power output below 2W does not mean you can legally operate an amateur radio on MURS freqs.
From the same web page that was specified in the post, read the bottom of the FAQs:

"To determine if a particular radio is permissible to use as a MURS station, you will need to verify

that it is currently type-approved for Part 90 operation;
that the frequency(ies) on which it will operate are authorized in the MURS;
that its power output does not exceed a maximum 2 Watts ERP ("Effective Radiated Power," including antenna gain or loss), and that the radio must not be capable of any higher power;
that the maximum deviation is not greater than 2.5 KHz; and
that the maximum bandwidth does not exceed the levels specified in 90.209 and 95.631(i)(b). See Question 15 above. "

Radios that are type-accepted to operate in the amateur radio bands are not type accepted to operate outside the amateur band (except for MARS/CAP) freqs.
As far as I know, the concern is that the radio was not designed to operate on the out-of-band freqs and the radio may not be able to guarantee the necessary specs (deviation, frequency stability, and maximum power) that are required for the freqs outside the amateur service. If the radio acts "dirty" outside the amateur bands, you could result in interference to other legal services.
This means that you are not supposed to use an amateur radio for anything other than the amateur bands (and MARS/CAP).
It is NOT legal to use an amateur radio in the business bands, public safety bands, GMRS, CB, FRS, MURS, etc. except for an emergency. This exception is specifically mentioned in FCC rules. Basically, in a life-threatening situation, normal rules are thrown out the window.

However, I'm not sure if the opposite is true-that it is illegal to use a commercial radio on amateur freqs. Commercial radios are designed to maintain specs across a wider range of freqs and may have better specs in the ham bands than some amateur rigs. If someone know for sure on the rules in this case, feel free to comment.

From: Kevin R.
Topic: 881 Message: 882

Myles you are correct. I sure did not mean to imply that a amateur radio operator should be using his radio out of band. Although both my dual banders will operate outside the ham bands, I never use them for that purpose. I just like that I can listen to the other bands without also carrying a scanner along. But I have heard of hams that use their HT's for FRS communications. I just try and do what the FCC says that I can do. I don't want to be one that spoils the bands for everyone else.

883. HPD stuff

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-01-04 17:19:17 UTC
From: scasko@aol.com
Topic: 883 Message: 883

A little info on some recent topics:

HPD has no plans to go 800 trunked anytime soon. What was discussed 3 yrs ago (at a meeting in Vegas...) was trunking our existing 460 channels. That idea was put aside due to the fact that nobody else was doing it and it was rather untested. Also, it would require a bunch of new equipment at considerable cost.

There is currently a Request for Proposal (RFP) out for a Houston/Harris County metro area system. From the little bit I heard discussed about it, it seems like they are talking about a big UHF/800 link system rather then multiple trunked systems networked together. There are a few police talkgroups in the city trunked system, but by and large it is crammed with water dept and other municipal work crews. Harris County is supposedly hot after the city to network that system in with theirs so they can pick up some more spectrum. The city is supposedly not interested in that at all though.

A proposal was made to the Chief, and then to the whole command staff, that our radios be programmed to communicate with other police depts in the area (well, the UHF ones). The Chief was very much in favor of it actually, and said it was going to happen. Well, that was July 98. The 12 Memorandums of Understanding (MOU's to the admin folks) were written, the cover letter from Chief Bradford to the other 12 Chiefs was written, and then nothing happened. I don't know where it is currently, but the letters to the other Chiefs were not sent out. There were many Command Staff members against it, so I think it has been effectively shelved.

73 Fox now has a live video link to TranStar (out on Old Katy Rd). They have to fly traffic reports for them during the rush hours in exchange for the equipment. There is also live video link to the HPD Command Center (1200 Travis) so they can watch events "unfold" (assuming the right helicopter is up). The footnote to it all is that the helicopter crew is not allowed to mention the existence of the video link unsolicited. They arrived on a chase on the Katy Fwy about 3 weeks ago and announced "Fox arriving, and the link is up." They got jumped on for that. If someone asks them if the link is up they can say yes, but they have been told not to offer the information on their own.

I do not know the frequencies or anything else about the video link, but I would have to assume it is a common frequency, probably used by news media also. Anyone with the right equipment could probably pick them up. I don't know how directional the signal is since Fox typically circles a scene and during anything live they would not have time to fiddle with getting a microwave beam antenna positioned if they were in the middle of something else. I'm sure someone will figure out how to receive it in the near future.

886. New lists!

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-01-07 00:17:35 UTC
From: Myles Barkman
Topic: 886 Message: 886

Guess what? New scanner, new lists.
Since I received my BC780 on Friday, I've been doing some playing around (duh). Now that I can track EDACS systems, I've added a couple of lists to my arsenal:
City of Houston Aviation Department
Houston ISD

There is not much information in these lists yet but it's like any other list I've started-you have to start somewhere.

Keep in mind that
1. I've never tracked EDACS systems before
2. I'm trying to program other things into the scanner
3. There's lots of other stuff I'm using the scanner to help me figure out (actual freqs used by HCSO trunks)
4. I still haven't experimented with LTR systems
5. I'm still trying to figure out how to work some of the functions

So if you have any TG information on these systems, please pass it along. In time, I may include listings for Montgomery County, Brazoria County and Fort Bend County. Problem is, I can't hear these systems from my house so I'm going to rely on other people's findings and published info.

Since we are on the subject of EDACS, I'm wondering how most people refer to talkgroups-in AFS (Agency-Fleet-Subfleet) or decimal?
I'm inclined to use AFS format because of the flexibility of programming and ability to differentiate agencies and fleets immediately.

BTW/FYI. I've noticed that if you use control-channel only tracking and give your TG alpha tags, that there is not a way to see what the TG number is when scanning or searching. If you track the normal way (all voice channels entered), the numeric TG will appear between the frequency and the signal meter. I wish there was a way to hit a key and toggle between viewing your alpha tag and the TG number.

Myles,

I live in Cypress (northwest Houston)and can reach Montgomery Co. freqs. easily. I just got a Pro 92 for Christmas, so I will let you know of any EDACS freqs as soon as I begin searching.

888. Houston Marathon 2001

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-01-08 03:16:43 UTC
From: B Compere
Topic: 888 Message: 888

The Compaq, formerly the Tenneco Marathon, will be upon us next weekend, January 14, 2001. For some interesting scanning, if you are not running in the race, here are some frequencies to listen to. Please note that the Amateur frequencies are subject to change, and there will probably be some direct frequencie that one must be near to hear,so, they must be captured on Race Day. They are listed as a guide to find the action. Plus, until Race Day, or a day or two before, it will be uncertain whether or not the Brown and Root system will be used.

Previous Houston Marathon Frequencies Used:

Amateur Radio:

145.340?
145.460
145.470

146.660 Net Control/Administration/Timing
146.700
146.840 Administration

147.080 Inter-Van/Simplex
147.470

216-223.000 mhz Amateur Frequencies. Not heard past two marathons.

442.500 Transport
444.600
446.050 Pace Car (m)

Business Systems:

Talkgroups related to the race heard in 2000:
Brown & Root TRSBrown & Root, Inc, Motorola type II hybrid
Location: Houston
System: ?

938.2375
938.2500
938.8875

From: B Compere
Topic: 891 Message: 891

I have searched my databases (found the old handwritten notes and e-mail printouts from Chris Parris), and updated my files. Attached is my compilation of the Astrodome Complex (now Reliant (name the building)) area frequencies. I hope they will be useful for the Rodeo and other venues you attend there. Sorry about the formatting. Notepad just doesn't work perfectly all the time.

A bit off topic, however, I traded for a lightbar/siren unit that I would like to sell or trade. It's a Federal Streehawk with blue domes, blue rear flashers and white takedowns and alley lights. It has a 100watt siren speaker, a Federal PA300 siren, Federal switchbox and Gails floor mount. Would like to sell it for about $300

The ISP that hosts my web page and where I read my list mail was knocked out due to a lightning strike today.
In the event anyone tries to go to my webpage and can't, I have an alternate site set up which should pretty much be a mirror of the primary site.
You can reach it at http://w5ac.tamu.edu/~kg5ai.
Also, if you need to reach me, make sure you email to my hotmail address. I cannot read mail sent to my other address right now.

My agency is slated for return to active service within the month. This is something I might be highly interested in. I need to outfit the little truck. Gimme a call and lets talk. However, I would need some red lenses, but that is easily taken care of. If it has alley lights, and take downs, it sounds fully loaded.

904. Houston Marathon Update

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-01-14 12:26:21 UTC
From: B Compere
Topic: 899 Message: 904

Kevin R sent this to me last night. So far, 146.84, 146.66, 145.47, 147.6 ad 443.575 are active as I type this at 6:20AM. If you have KTRK news on you can see their coverage of the race. Aaaannnd, they are giving Bob Boudreaux a hard time, since he is a participant. Also, Compaqhoustonmarathon.com is profiling their new marathon tracking chip so one can follow the participants. A link should be available on KTRK TV's link (KTRK.com?.

I hope this looks as good on the newsgroup as i does on the computer screen. Notepad formatting may raise its ugly head again...

Here is a list of the amateur nets you will be hearing

NET Primary Secondary
Course (Admin) 146.84 146.66
Transport 442.925 443.175 or 443.575
Timing 147.36 146.66
Timer Vans 146.66 147.36
Leading Pack 446.05 (simplex) 443.275 (simplex)
Amateur TV 147.1 (voice)
APRS 146.76 (voice coordination)
5K Run 146.47 (simplex)

I'll be working a water stop in the morning, let's hope for nice weather.

Kevin R

After the fact, but maybe useful info next year. The Kelloggs Brown and Root trunk system that was being used by the Compaq Marathon folks is located on the Allied(?) building downtown. I can hear it fine in Pasadena. Depends on what radio you may be trying to track them on. I know the 780 can track it either in regular "type in all freqs for system" or "control-channel-only" mode. I think the BC245 can track 900 MHz systems as well. The 235 cannot. Not sure about other brands or models.
Don't know exactly which freqs are used for the control channels but I think it is probably the highest four freqs. I put info on my (secondary) web page about this system and I found some possible freqs used by George R Brown also. Brown and Root also has a trunk site in Baytown off Baker Rd but the systems do not appear to be tied together. Did not hear any Marathon activity on it. Info on the system could be useful for other events though since they may rent out radios for things like the upcoming Rodeo.

I also verified some freqs used by Aramark and the Houston Astros club at Enron. These are low power UHF repeaters that can only be heard within a couple of miles of Enron.

All info can be found on my back-up web page at
http://w5ac.tamu.edu/~kg5ai.
The page at http://www.clarc.org/~kg5ai is still not up as the lightning problem has not been fixed (I guess). I also still must read any HoustonScan list mail through the egroups page. At least I can.

The frequency is the old Harris County SO channel for the west side (District 4). The PL is correct. If you look back into an old scanner directory it will be listed under the county. THey also had HFD licensed on it from the HCOEM which HFD operates in conjunction with.

33.70 is used by the Northwest VFD in the SH249 / Northbelt area as a back channel. It is licensed to there Rural Fire Prevention District (Harris County RFPD #20) and is commonly referred to as the FM1960 Area "Command" channel.

But, right now it is probably Skip from OH, PA, NY, or CT. The Yanks are still heavily using Low Band, due to it's propagation characteristics over there terrain.

I know this isn't much help but it very possibly could be "skip" from another part of the country. Do you hear it 24/7? Or maybe just certain times of the day?

919. Suggestions?

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-01-19 17:58:31 UTC
From: zulu
Topic: 919 Message: 919

Hi there,

I'm fairly new to the idea of scanning trunked systems and I'm looking for some
advice. Can I purchase a scanner such as a Uniden BC245XLT and be able to
listen to the Harris County System with no problems?

I went to a few stores and asked around, half saying I could listen no problem
and the other half saying I'd have to update frequencies and talkgroups everytime
I turned it on basically.

If I purchase a BC245XLT (or whatever you all can suggest?), can I program my
scanner and actually hear stuff I want to fairly easy?

Any suggestions on what I can do or what I can purchase so I can listen, I would
appreciate it. I live on the outside of the Houston City limits so my goal is to listen
to Harris County Sheriff.

Here is some info on the scanner I was looking at:
www.amazon.com/exec/obidos/ASIN/B00000JBRT/radioscannercom/105-5613247-6486349

Thank you!
Zulu:)

I live in the Pasadena area and use the Radio Shack PRO-2067 and PRO-92A and monitor the Harris County System without a problem. Harris County is using a Zone system and you may need to program in the Downtown system along with the Zone transmitter in your area. I monitor the Downtown transmitter, Alvin Transmitter, and Baytown Transmitter and occasionally the Huffman transmitter from my location. This can be done with the 245/780 Unidens or the PRO 92A/2067 radios. There is a file for the Downtown Harris County Transmitter on the PRO-92 News Group. http://www.pro-92.com/

This is using the software that you purchase extra to program the radios. It is not necessary to have this software but it sure makes it very easy to reprogram the radio.

Awesome! Thanks to you both for the quick replies! Three more questions.

1) Where can I buy the BC245? I know you can order it online, but I'd really rather go and buy it at a store, like, today! :)

2) Is this all the info I would need to listen to all the stuff on the Harris County trunked?
http://w5ac.tamu.edu/~kg5ai/freqs/harris_trunk.html

And does the scanner come with instructions on how to program the talkgroups in, etc?

3) I live in NW Houston roughly.. 1-10 & Beltway 8 near Cy-Fair, that area.. what "tower" should I try to pick up? I see like Downtown .. Tomball, etc.. are they all the same, just better or worse signal?

Thanks!!

That's one reason to use/contribute to the lists kept here! Myles and
the rest do
a great job.

Where's West U. you say? Hmmm...okay, try driving south on Buffalo
Speedway from
Bissonett at about 45 mph. West U. will come and find you!

Regards,
Rick

Order it online if you can stand the wait and spend the money you saved on some accessories like an outside or mobile antenna, carry case, *spare battery pack*, software or whatever.

> 2) Is this all the info I would need to listen to all the stuff

Pretty much.

Pick the site with the best signal for you area or program several into different banks for mobile use.

Awesome, thanks!

Now, seriously, can I pick up a BC245 like at Best Buy
or any type of retail store for a fairly decent price?

I really want one ASAP :)

Thanks

Call Sears, they were supposed to be carrying this model at one point.

Hey Eddie are you out there..???? ;) Here is a link to his site
http://www.installer.com/
Give him a call and see if he has one in-stock. And be sure to tell him you
want firmware 2
without the "5 second delay."

Kevin

ps. Best Buy will not have them and Sears was closing them out about 5
months ago, but you may get
lucky and find a store that still has one.

Try Eddie 1st at River Oaks car stereo http://www.installer.com/
I know Sears did carry them and may still do. But I remember they were closing them out a little
while back so don't know what the current status is with them. Best Buy does have a scanner or
two but I'm almost positve it won't be the 245. They'll tend to have lower end scanners.

Sorry for the need to send this to the list, but I have lost Jason's phone number. (Clear Lake EMS)

Jason,

I would like to know if you can get a RED "end cap" lense for this Whelen strobe bar. Since it was outfitted for Police use, I would not be within the law to use it on the Ambulance. Law books state that EMS vehicles must have a flashing red light on the highest and widest points of the vehicle, to be seen at a 360 degree radius, for a distance of 500 yards....at least that is what I recall. I have not checked it since '95, when Legislation actually added the words "Emergency Medical Personnel" to the Statute. Prior to '95 the Statute only mentioned Volunteer Firefighters, as equipment allowed on a personal vehicle.

I'll have to check with the State, to see if this Law extends to EMS vehicles in service, and directly owned by a licensed State EMS provider. If it does, then I am going to need to either get an end cap from Whelen, or see if you can dig one up for me. Oh.....and to make this official for the list, I DID hear this subect discussed on 460.325, a North Shepard Officer had a volunteer EMS private vehicle pulled over, and was was bumping for a seargent to ask if the vehicle was legal or not. I didnt get to hear the response,....it was on "scan" and I didnt get to the "manual" button in time enough to locate the frequency and hear the response.

Please respond off the list, or gimme a call, 713-721-9740. No big rush or hurry, but I do need some info, before we go back into service. Thanks in advance,

Cougar!!

Hello Cougar,
you can get those parts from Rusty at Emergency Safty Products also known as ESP in Pasadena ..... I've had really good luck with Rusty over there ...He's always ready to help.... I have a 60" Wheelen bar which is longer than normal... He fixed me right up... also he has pretty much everything in stock also....

Woah...wait a min....ESP....used to be called Emergency Signal Products in Pasadena? I thought they went out of business a long time ago. If they are still in business, I will CERTAINLY patronize thier products. If your friend Rusty, could utilize the two Whelen 8ft. wrap around strobe bars I have sitting on the back porch, please let him know that I have them available. I'm not looking for money for them, just hate to see them thrown away.

I think the actual Whelen "Name" for these strobe bars is..."The Edge."
They are doing the community no good at all, sitting on my back
porch....if anyone can utilize them please gimmie a call. Again, I am not
asking for money, I would just be happy to see them go back into service
for those who might need them.

Steve,

Try a cell phone antenna. You might have to get a TNC to BNC
connector adapter to make it work.

Regards,
Rick

940. Suggestions and Other

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-01-21 15:03:58 UTC
From: Mike Holland
Topic: 940 Message: 940

Glass Mount Cellular works well for 800 Scanners. I use an Antennex TRAB8063. This is a 3db nmo mount, low-profile, antenna and works great on 800. If you can find what we commonly call an 800mhz pigtail, those work well also.

If many of you are hearing 453.825 now and you were not able to before, Lakeview PD Just put in a 180' Tower where they had an 80' tower before. Should be able to hear WNHK566 all over town now.

Motorola has also sold all of their 900mhz SMR Systems in the Houston Market to Nextel. My office received a letter from Motorola this week stating the sale. Looks like IDEN is the name of the game for the future in Houston. In addtion to the Motorola sale. Motorola has been pitching their IDEN Protocol to all of the 800 and 900mhz Motorola systems owners in the Houston/Galveston/Freeport area. The new product is called harmony.

http://www.motorola.com/LMPS/pressreleases/page1175.htm

I do not think they have had any takers yet.

I also think it would be great to take the off topic stuff to another forum and/or private e-mail. This is an e-mail group about scanning and freqs, not about threads upon threads of garbage. It clogs my inbox. I enjoy the group as many do but feel that it should stay on topic.

If the e-mail is for the general good of the group then post it. If not, take it somewhere else.

Thanks,

Mike

National Incident Notification Network

Do you listen to police, fire, EMS radios? Do you like to know what is going on before hearing about it on the news?

Well NINN is for you then. NINN is a group of people from around the country that listen to police, fire, EMS and other radio frequencies to bring you the latest, and first hand report of what is going on in your area via Email, or by Alpha Numeric pagers.

Dispatchers and Administrators Needed

Do you want to make a difference in what the "people of your area hear??
Are you interested in working with a system, and group of people that want to make a difference?

Our system, and policies help you make that difference, so you can get the real news out there. NINN doesn?t have 1 person making the decisions; it has a board of directors of 5 persons making the decision, and many more on the support side of our program. No more weeks of waiting for an answer from support.
This is a Free Service, All You have to do is log on to http://www.ninn.net enter your email or pager address and start receiving Alerts
Immediately after entering your address, no forms, no approval, you will be Informed of in Progress Incidents as the happen,
NINN is in need of Dispatchers Throughout the United States, at this time all States are not in Active Status if you would like to become
A Dispatcher, a short Application form is available here http://www.ninn.net/dispapp.html
Dispatcher duties, Monitor Public Safety Communications via Scanner Radio or other device and when interesting events happen
Post the event to other members in your State, if you have any questions contact support@... and we will be happy to
Answer them. As NINN Administrative Support is Incredibly Efficient, within a brief period you will receive Your Dispatch ID # and then you become part of

the Action!
Links for NIMM egroups by Region are enclosed, to find
your Region click here http://www.ninn.net/regional/
Thank you for your time,
NINN Staff

Would anyone happen to have any kind of dispatch codes (such as 10-whatever, or ANY type of communication codes) which could make my listening expirience easier for the Cy-Fair Vol. Fire Dept or area other departments that you think might use the same basic layout.

And also anyone that might have some info on dispatch tones, and maybe programs that could decode that on your comp. (tones for dispatching engines, etc)

Any info at all for Cy-Fair VFD or any other agencies... <- hope thats broad enough, sorry. :) I just want to try to hear and understand any-thing

Thanks!!

From: cmcj@hal-pc.org
Topic: 953 Message: 953

I heard a call dispatched on Cy-Creek's EMS channel tonight. The determinant used was "RSI". The dispatcher advised someone was robbed at gunpoint and shot in the back of the head. So what is "RSI".

On a similar subject, does anyone have the complete list of determinants used for EMS calls?

Thanks in advance.

954. Re: [HoustonScan] What is "RSI"

What your heard was Actually Retoric from 2 calls.
Medic 51 was on scene on a mdeic call and Requested a Supervisor (Distric 51) for "Possible RSI" and Medic 54 was in-route to the Shooting at Bammel N Houston and Veterans Memorial w/ the other supervisor (Distric 52) and the Medical Director (5002).

RSI - "Rapid Sequence Intubation"

Below is the list as used by Cy-Creek EMS.

1 - ABDOMINAL PAIN/PROBLEMS 20 - HEAT/COLD EXPOSURE
2 - ALLERGIES/HIVES/MED REAC/STING 21 - HEMORRHAGE/LACERATIONS
3 - ANIMAL BITES/ATTACKS 22 - INDUSTRIAL/MACHINERY ACCIDENTS
4 - ASSAULT/RAPE 23 - OVERDOSE/INGESTION/POISONING
5 - BACK PAIN (NON-TRAUMATIC) 24 - PREGNANCY/CHILDBIRTH
6 - BREATHING PROBLEMS 25 - PSYCHIATRIC/SUICIDE ATTEMPT
7 - BURNS/EXPLOSIONS 26 - SICK PERSON
8 - CARBON MONOXIDE/INHALATION/HAZ 27 - STAB/GUNSHOT WOUND
9 - CARDIAC/RESPIRATORY ARREST 28 - STROKE/CVA
10 - CHEST PAIN 29 - TRAFFIC ACCIDENTS
11 - CHOKING 30 - TRAUMATIC INJURIES (SPECIFIC)
12 - CONVULSIONS/SEIZURES 31 - UNCONSCIOUS/FAINTING
13 - DIABETIC PROBLEMS 32 - UNKNOWN PROBLEM/MAN DOWN
14 - DROWNING/DIVING ACCIDENT
15 - ELECTROCUTION
16 - EYE PROBLEMS/INJURIES
17 - FALLS/BACK INJURIES(TRAUMATIC)
18 - HEADACHE
19 - HEART PROBLEMS

RSI refers to Rapid Sequence Intubation.... a
procedure used to intubate a patient whom is
semi-conscious but still needs a secure airway.

I'm not sure where to find a complete list of
determinants, but I'll look around.....

958. New lists/format

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-01-29 03:23:08 UTC
From: Myles Barkman
Topic: 958 Message: 958

I've just made some changes to my web page
http://www.clarc.org/~kg5ai/freqs.html

I added a legend file to describe some of the symbols and terminology I use in my lists. Shortly, I will take out this information from the individual lists.

I added the beginnings of some trunk lists in-progress. These are:
Montgomery County
Missouri City
Brazoria County
Fort Bend County

I currently cannot receive these systems from the house (including Chambers County) but perhaps if I got a real 800 MHz antenna on the roof with gain, instead of a discone (no gain), maybe I can pick some of them up. For the mean time, I will be relying on info from other sources. I've noted the primary sources of the info I will use in each of these lists. If, after, I've put together the info for these systems and you find additional or erroneous information, please, as always, pass it along.

Will be gathering info for the upcoming Houston Livestock Show & Rodeo starting Feb. 13. Should be hearing lots of activity on UHF and associated trunked systems in the next couple of weeks.

On the subject of Chambers County, who among us can actually receive this trunked system reliably? This tower is east of Anahuac and with it's height, looks as if you would have to be in the Baytown area to start picking it up. Don't know if a better antenna would even allow me to begin hearing it without having a beam. If I get a new 800 MHz gain antenna, it will be a vertical about 20' off the ground.
Any recommendations on antennas?

By the way, looks like my radio club has been toying with a new HTTP server which appears to have been working properly so far (fingers crossed). My primary pages are at http://www.clarc.org/~kg5ai with the backup at http://w5ac.tamu.edu/~kg5ai. The W5AC site does NOT have the newest information on it at the present time. However, if something happens to the primary site, I will be updating and maintaining the back-up until the CLARC site works again.
Sorry for any inconvenience this all may have caused but, hey, it's not my fault and it's a hobby anyway. Get over it!

Notice the new address I have for the HoustonScan list in my signature. You can continue to use the egroups address with no problems. If you wish to update your settings on the yahoo groups webpage, you will need to convert your egroups account to a yahoo account. It is painless and features are

the same if not more.

I'm at Flamborough and Yorkshire in Pasadena with a commercial 800 MHz omni 9db antenna with a Stridsberg Enginering gasfet preamp and either of PRO-2004/2042 Uniden 895 and do not receive Chambers County. I can receive Harris County Huffman, Alvin, Downtown and Baytown transmitters without a problem.

On the subject of Chambers County, who among us can actually receive this trunked system reliably? From: Ed Lentz
Topic: 961 Message: 961

Don't think the Yagi will help either, this time it's going to take some height to pull them in and 20' will not be enough. I was offered a 9 element 800 yagi just the other day and I'll see if it's still available and give that a shot. I would like to run Trunker on their system sometime just to see what's going on over there.

I have heard that Harris County will be absorbing the Chambers County System and making it into their Chambers county Smartzone site. I believe that the Chambers County Tower is on Anauach.

I have been able to monitor the system but do not have much useful information.

Mark

964. new trunk listings

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-01-30 04:15:55 UTC
From: Myles Barkman
Topic: 964 Message: 964

Well, I goofed on my last email about the new stuff on my pages. Gave you a bum address. I tried to email from a different account but it seems to have been late getting to the list.
Anyway, the URL should have been:
http://www.clarc.org/~kg5ai/freqs/freqs/html as someone else pointed out.
I just hurriedly copied and pasted info from various sources as well as one that emailed me today with Brazoria County info.

The formatting is a bit rough but I will iron it out in time.
If anyone is in range of these systems that I cannot hear (Chambers, Brazoria, Fort Bend, Montgomery, and Missouri City), please see if you can fill in the blanks or otherwise add to these lists.

I've been told that I got a plug from Monitoring Times for the Feb. edition. Maybe I'll be getting more hits now. I'd like to make this THE source for Houston area scanning info but I can't hear everything everywhere so I need your help!

When I gather more info and clean up the formatting of these lists, I'll upload them along with updates to the other lists I have at the yahoo groups HoustonScan site. I guess this could be another good backup when my web pages go down.

Anyway, thanks to all who have supported my lists and I wish I could share with you all the emails thanking and congratulating me on such a nice site with wealth of information. It makes the hours I spend sifting through spam more bearable. :)

From: Mike Holland
Topic: 965 Message: 965

Here in Galveston County Texas-New Mexico Power has come out of the dark ages of Low Band and put up a multiple site UHF Conventional system.

451.3500 WPNV619 TEXAS NEW MEXICO POWER CO IG LEAGUE CITY TX GALVESTON 292817/0950448

451.4500 WPNV619 TEXAS NEW MEXICO POWER CO IG LEAGUE CITY TX GALVESTON 292817/0950448

451.7875 WPNV619 TEXAS NEW MEXICO POWER CO IG LEAGUE CITY TX GALVESTON 292817/0950448

451.8375 WPNV619 TEXAS NEW MEXICO POWER CO IG LEAGUE CITY TX GALVESTON 292817/0950448

451.8875 WPNV619 TEXAS NEW MEXICO POWER CO IG LEAGUE CITY TX GALVESTON 292817/0950448

452.2625 WPNV619 TEXAS NEW MEXICO POWER CO IG LEAGUE CITY TX GALVESTON 292817/0950448

They are using the Motorola HT-750 Handhelds and no mobiles. This is a simulcast system with some voting receive sites. There is a similar system in Brazoria County.

This is a great one to tuck away for Hurricane season.

Mike

966. updated trunk lists

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-02-01 04:47:14 UTC
From: Myles Barkman
Topic: 966 Message: 966

Well, I've finished making the changes to the Houston area trunk lists so that they are mostly similar and consistent in format.
I've put the hex value of the talkgroup in all the trunk lists (except Reliant Energy) for all you folks running trunk-tracking software or programming 2-ways (for monitoring purposes only, of course).

Now I need you good people's help in making the lists more complete and accurate. I found out last night that I can barely track the Brazoria County system with my 235 and a rubber duck. So I may be able to confirm and find new talkgroups for that system if I listened to it long enough. Already have a pretty good list thanks to others' contributions.
But for Chambers County, Fort Bend County, Montgomery County, and Missouri City, I need folks in range of those systems to check my lists and see if they have any info to offer.

I'd like to have as much info on these systems before severe weather season starts up again. Some good info may be had by having the right information beforehand.

Also, can anyone back up the rumor that the Chambers County system might become absorbed by the Harris County folks and turned into another remote site for the SmartZone system? Would be a good way to start hearing some Chambers County groups as some traffic may be retransmitted through the Huffman or Baytown sites as their folks will have a choice of sites to go to for better signal. I wonder if Harris County would make sure that the freqs used on the Chambers County system would actually become licensed!

From: Chris Manuel
Topic: 968 Message: 968

Does nayone have any new freqs for Deer Park?
I don't hear much on the VHF band anymore.
I have also seen 800 mhz antennas on the cars...are they switching?

969. Houston Fire Department

From: Adam
Topic: 969 Message: 969

Hello,

When I listen to the Houston Fire Department (I'm using frequency 453.5000), about every 5 seconds I hear what songs like some kind of squelch. It's as if someone is pushing the transmit button on their radio and then immediately letting it go. I doubt this is the case, though.

Is there another frequency or anything I could do to stop this annoying squelch
sound?

And a second question -- Does anyone have some general information about the Houston Fire Dept (e.g. 10-whatever codes, determinant codes, and just tidbits that could make listening easier) that they could maybe toss along?

Appreciate it!

Adam

Those annoying noises are the Status Buttons being pressed on the fire/ambulance apparatus (In Service/At Station/Enroute/At Scene/etc. And, no, I know of no way to avoid them. I have a couple of scanners that can decode CTCSS tones, which I thought would eliminate the squawks and just allow the voice transmissions to be heard. But, the squawks use the same PL tone when transmitted.

Last week, Channel 2 did a story about the Asia Community Tiger Ball, which will be held this weekend, February 10, 2001. Ambassadors and Diplomats from several Asian countries will be attending. So, crank up your scanners and see if the Department of State Security is in the clear, or if they have begun to use some type of scrambling. Also, check out the Houston Police Citywide, 460.4250, (when not being used for the Livestock Show and Rodeo Parade), Special Operations, 460.3500, and CID (Mayor's Protection Detail, etc.), 460.4000, channels for escorts. Also, since many diplomats will be in town, quite possibly several Harris County/Pasadena talkgroups may be used for various venues (Constable Departments being used for escorts [Harris County], and Republican State Convention [Pasadena System] for examples.) Quite a quest this weekend in addition to the parade/fun run (check out Kellogg/Brown and Root)/and all the other related activities.

State Department

Subject: Deer Park PD

Not that big a deal but I thought I'd just mail *something* on the
list.

Anyone notice that Deer Park PD changed frequencies in the past week
or so?
Not only that but it's the first agency I've seen start to use some
of the new freqs allocated for the new narrowband specs.

They are using 154.7925 output with 158.9325 input. Strange look to
these freqs, huh? Just a year ago, I would have thought they were a
typo.
Fortunately, most receivers are wide enough to pick this up on either
154.790 or 154.795 MHz. You just might get some interference from
agencies on 154.785 or 154.800 MHz (not that there is anyone around
here using those that close).

Deer Park PD is also using 155.0025 simplex with no CTCSS tone for
what they call "TAC". It looks like this was licensed to be a
repeater but it's not that way yet anyhow. Other freq they are
licensed for is 158.9775 but I haven't heard activity on this yet.
Still using 153.875 for public works.

The Status Messaging you are hearing is called MDC-1200 Status signaling. You must have a Motorola Radio with MDC Muting enabled to be able to mute those annoying status tones. I have a UHF Spectra that mutes them wonderfully. I just hear a brief chirp at the beginning and that's it!

I have purchased a new Radio Shack PRO-2067 Trunk-tracking scanner. I also have the GRE Scanner Data Maanager software. Since I don't have an up to date freq. list to program it completely, and also prefer not to re-invent the wheel if someone already has a file established on disk, I'm hoping somebody out there actually has such a file. Please....???!!??? Either reply here or send a direct e-mail for your response. Many thanks. Chris.

Anybody have anything else on the freqs for the search that took place? Any help would be great. If the search team had a search 2 and 3, they must of had a search 1. Guess I need to get closer to the action when an event happens. Is this search team a government agency? I heard them on the Pasadena system.

Any info would be helpful.

Heard the SO on the Galveston System and on simplex channels.

Anyone start getting any trunked data on Chemical plants in the area yet:

Phillips66 - Johnson Multinet
Nova Chemical - Conv UHF
Shell - UHF
Goodyear - ?
Mobile - ?
Exxon Baytown - 2 900mhz Motorola
Union Carbide Texas City- 900mhz EDACS
BP/Amoco Texas City, Chocolate Bayou, Stratton Ridge - Motorola 900mhz
Sterling Chemical - UHF Conv
Exxon Pipeline - 800 Conv

Just some stuff to start looking for. Never know when a plant accident is going to happen. This might also be of some interest to some of news folks on the list.

Hey Guys (and Gals),

I think Myles has the ultimate say, but I feel that the list should be kept strictly to the topic at hand, no offense Dwayne. I have seen to many other lists start diverting to off topic subjects that go on and on and on about off topic items. Most of the folks here are here for the hobby. If we want to start a swap and sell forum for Houston, then lets start a new egroup for it.

To whom it may concern,
For what it's worth. Here's my opinion.
If one is not operating an ongoing business, I think it should be allowed. I think it would be a good thing, if a member could dispose of equipment via a posting to the message board. I have seen numerous postings of used equipment for sale in the past, which seemed to be fairly priced. As long as all parties try to keep things square, what would be the problem in this.
I don't know what the other members think, but this is my opinion.

Thank you,

Gerald James

983. HLSR-- Trail Rides

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-02-08 11:36:30 UTC
From: bpckty1@webtv.net
Topic: 983 Message: 983

The Rodeo Trail Rides are entering the big city, preparing to meet at Memorial Park. A ride may be passing near your location. Trail Bosses often use radios to communicate with their committee members to keep their members safe while on the road. The itinerant business frequencies are probably used the most. 151.625MHz, for example, is used by the Salt Grass Trail Association. Also, check the FRS frequencies. Plus, don't forget the various Harris County and Pasadena talkgroups: TACs/I-TAC direct/Sheriff and Constable back channels/Metro TACs, and HPD Citywide/Special Operations/and Direct (460.225). And, don't forget the media.

Happy Rodeo Scanning...

Topic: 985 Message: 985

Here's some info on the conventional UHF activity at Reliant Park for Rodeo. Keep in mind there are two channel plans in use, one for Reliant Park radios and one for Rodeo radios -- and to confuse things, apparently they have some of each other's channels mixed in with their own. The below is the best I've been able to personally verify. Also, there are Aramark (food/concessions) radios with their own frequencies.

R = repeater output, M = simplex mobile/portable only

The Reliant Park channel plan changed relatively recently from a channel plan that was previously posted on this list. Apparently, a few radios with the old channel plan are floating around (just in case this all isn't confusing enough).

Reliant Park Astrodome, Astrohall, Astroarena:
Ch Freq Description
1 463.3 R [151.4] Event Services - Primary
2 463.8375 R [85.4] Event Services - Secondary / General Talk-around
3 464.0375 R [151.4] Central Plant Operations and
Maintenance/Engineering
4 464.3625 R [151.4] Security - 24-hours
6? 463.9375 M [151.4] Custodial
7 462.075 R [151.4] Event Security - Inside
8 462.025 R [151.4] Event Security - Outside
9 464.3875 R [151.4] Parking
10? 463.6625 R [114.8] See Rodeo below
11? 461.1375 R [100.0] Customer Service
461.95 M?[151.4] ?
462.1375 M [151.4] ?
154.57 S [CSQ?] Director to Camera Operators (Astrodome)

Aramark Corporation is licensed on these frequencies at Reliant Park:
462.7625 and +5 MHz
462.8125 and +5 MHz
462.8625 and +5 MHz
462.9125 and +5 MHz
463.3125 and +5 MHz
463.7375 and +5 MHz
463.7625 and +5 MHz

Of those Aramark freqs, I've noted the following activity:
Ch Freq Description
3? 462.7625 M [91.5] ?
462.8125 M [74.4] ?
462.9125 M [94.8] ?
467.8125 M [67.0] ?

6? 467.9125 M [ ] ?

Rodeo freqs in use so far this year:
Ch Freq Description
461.3375 M [114.8] Talk-around?
8 462.1125 R [114.8] ? setting up audio
463.3375 R [114.8] ? talk about radios for bbq
463.4875 R [114.8] Marketing?
463.5125 R [d 023] Admin?
463.5875 R [114.8] Security
3 463.6625 R [114.8] Setup/Maintenance
464.4875 R [d 703] ? membership, badges, exhibits

Another possible Rodeo freq:
463.4375 R [ ] talk about golf carts

-Eric

988. FOR SALE: Standard GX5800T 800mhz radio

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-02-10 22:52:35 UTC
From: Cliff Maduzia
Topic: 988 Message: 988
Attachments: 1 described; 1 payload recovered; 1 useful image is shown below

I'm selling a Standard GX5800T radio with most every Harris County department programmed in it.

Like new! Works great!
A sample of what's in it:
- All tower sites (Tomball, Clodine, Tamina, etc.)
- All constable departments w/ all back channels
- Metro PD (with back channels)
- Spring ISD PD, Klein ISD PD, Aldine ISD PD, etc.
- Toll road channels
- DPS channel
- Fire marshal
- HCSO (all 4 disp., tac's, & N,S,E,W tac's)
- HCSO supervisors
- PAC channels
- Life Flight
.....and more that I don't remember.
I'm asking $300.00 or will trade for a 780xlt scanner.
This radio sells for $500.00 + !

I'm selling a Standard GX5800T radio with most every Harris County department programmed in it.

Like new! Works great!
A sample of what's in it:
- All tower sites (Tomball, Clodine, Tamina, etc.)
- All constable departments w/ all back channels
- Metro PD (with back channels)
- Spring ISD PD, Klein ISD PD, Aldine ISD PD, etc.
- Toll road channels
- DPS channel
- Fire marshal
- HCSO (all 4 disp., tac's, & N,S,E,W tac's)
- HCSO supervisors
- PAC channels
- Life Flight
.....and more that I don't remember.
I'm asking $300.00 or will trade for a 780xlt scanner.
This radio sells for $500.00 + !

I've confirmed a few more freqs in use since my posting to the list the other day. All information I'm able to confirm will be posted on the following Web site:

http://www.owlnet.rice.edu/~ecarlson/scanner/reliantpark.html

-Eric

991. Rodeo freqs

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-02-11 05:22:30 UTC
From: Myles Barkman
Topic: 991 Message: 991

With all the info going around about the rodeo, I have put my own list together which incorporates what Eric has put together. I'll be checking his list out on his page for updates. I'll be adding it to my "list of lists" soon. Keep checking.

My question is, what is the difference between the folks on the Brown and Root trunked system and the folks on the VHF system?
There are lots of different folks with different radios.
There are Reliant Park guys, HLSR guys, and whoever these people are on 900 MHz.

Then there are the Aramark people, folks probably filling up the FRS channels, Metro folks hauling people to and from the place, and possibly directing traffic in the area.

Much of the UHF activity on-site is pretty low range, like the Enron repeaters. So you have to be within a couple of miles to hear most of the activity. If you happen to go to the Rodeo or go near it, plug in these freqs and see what is active and better yet, try to figure out who is using it and the usage. Heck, if you can, try to find some freqs in use that aren't in any lists so far (they will be).

998. Department of Aviation

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-02-11 20:35:49 UTC
From: Myles Barkman
Topic: 998 Message: 998

Is anyone here knowledgable with the Houston Department of Aviation trunked system, or at least their organization?
Been listening to their EDACS trunked system and have made some guesses about their Agencies, Fleets, and subfleets.
Looks like Agency 2 is all Intercontinental traffic, Agency 4 is Houston Hobby. Fleets 2,3,4, and 5 are a bit ambiguous. Fleet 6 is emergency type ops.
"Raycom" seems to be some central dispatch. I believe this reference is uised in other EDACS systems in the country.

Other unit #s are
"Parking","Facilities","Maintenance","Ops","Electric","Grounds", and "AR" followed by a number.

Ops folks seem to be on many of the talkgroups. Can't figure out their specific duties or if their is a talkgroup that belongs to just them.

Also, haven't heard any activity I can say originates at Ellington Field. I suspect if there is, they may have their own Agency #, perhaps 03.

Lastly, I am wondering why Airport Security is still using the UHF system. Perhaps the signal to Hobby or Ellington is not reliable enough for them. Would think it would make for better interoperability for security to be on the EDACS system. Anyone have insight into this?

Myles...

I used to hear the IAH maintenance/operations base use the RAYCOM call when they were on the
UHF-T frequencies also.

My guess might be that the airport police are part of HPD, and their UHF channels are accessable
to the other HPD units when needed. Moving them to the EDACS system would leave them without
access to the HPD channels, unless they come up with a cross-link of some sort. Maybe Steve Casko
could comment...

Chris Parris >>

Well alrighty then.....

The Airport Police were fully merged with HPD several years ago (as were the City Marshals). Transfers are readily made back and forth. We have had IAH and Hobby Airport PD in our radios since I have been on (10 yrs) which was prior to the merge. I think it is just an inter-operability factor, and a good dose of intertia. I know I wouldn't want to carry two radios on my belt all the time (but you oughta see my car...).

Topic: 1014 Message: 1014

I think many of you have already heard about the death of Channel 2
News Chopper 2 pilot Rod Hooks. He was found yesterday morning in his
horse trailer at the rodeo and had died from natural causes. Rod was
a
hero in every sense of the word, he was a decorated war veteran
having
been shot down in Vietnam 4 times earning the Purple Heart and Flying
Cross. I am one of hundreds of people who were fortunate to have
flown
with Rod on news assignments and always felt safe being in the air
with him. We all affectionately called him "Cap'n Rod" but he had
earned the rank of Lt Colonel when he retired.

Condolences for his family can be left on the click2houston.com
website.

Fly High Rod, we'll miss you!

1016. West Harris County EMS/West I-10 FD

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-02-23 01:01:23 UTC
From: bpckty1@webtv.net
Topic: 1016 Message: 1016

Interesting development tonight. I don't know what the problem is, but both agencies were told to switch to West I-10 Channel One. This is the single channel repeater, 855.9625MHz that was taken out of service a few months ago. The dispatcher said they were having some type of problem with the Harris County system. But, my Pro-92 was unable to capture any problems. Which is about right, since it only captures what comes over the repeater. Busyies (sp?) are never heard. Anyway, interesting scanning tonight. Tones/calls/traffic are simultaneously (sp?) on their respective Harris County Talkgroups, West I-10 Primary, West I-10 VHF (pager), and West Harris County EMS VHF (155.295MHz). Also in use, per the dispatcher, are the Nextels, but, of course, we cannot montitor those. All this occurring just before/during a dispatch for a major automobile accident. Overall, it has been an interesting suppertime monitoring experience.

1017. W-I 10 and WHCEMS update

Date: 2001-02-23 01:39:55 UTC
From: bpckty1@webtv.net
Topic: 1017 Message: 1017

All comms are now on the conventional channels, only. Trunked traffic is not now in use...

1018. W I-10 and WHCEMS Update-2

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-02-23 11:17:57 UTC
From: bpckty1@webtv.net
Topic: 1018 Message: 1018

About 11:OO PM, 2/22/01, they went back to the Harris County Trunking System. Whatever went wrong was fixed.

1019. BC245

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-02-23 22:32:56 UTC
From: zulu
Topic: 1019 Message: 1019

Hi, I finally leaped and bought a BC245. Does anyone know what option I select when I try to program a Trunked Bank? (the choices are like.. E2 800, E2 900, Ed, E1, etc..

and also, how do I program in talk group IDs? do I need to?

help! :)

1020. Rodeo and other stuff

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-02-23 23:53:22 UTC
From: Myles
Topic: 1020 Message: 1020

<This email may come out again. My original post was delayed through Hotmail. Sorry about the formatting too.>

Went to the Rodeo Tuesday night. Brought the scanner and loaded up a bank with the freqs licensed to HLS&R. Also had a list of all other freqs reported in use.
But, let me tell you what I didn't have: Earphones!
If you've ever brought a scanner to a Nascar Race, you know what I'm talking about.
You cannot go to a structure with a rounded dome and mega speakers all over the place echoing everywhere, and screaming teenage girls behind you without over the ear headphones. But it looks sort of strange going to the rodeo wearing nice padded earphones. So if you really want to try scanning in the dome, do it outside the building or around the perimeter behind the seating.

I also repeat something I've said before about the Renaissance Festival. It is hard to go to an event (especially with others) and enjoy yourself AND try to figure out the channel plan of a bunch of freqs or search for new ones. Looks like I'll be going down to Galveston for Mardi Gras Friday evening but I'll be there on business per se so I won't be playing with the scanner too much though it will come with me.

Now on to other things:
If you haven't heard, Metro has been utilizing a helicopter they call "Fox".
Whether this is one of the HPD helicopters is unknown to me. I'm thinking they are using it to monitor Rodeo traffic but I really haen't listened to too much of it's operations. It has been using the Metro Special Event TG on the HCSO system, Uniden ID 15344.
I have also heard Rodeo related parking/traffic ops on the Mutual Aid Channel 1 TG, ID 8560.

I've been hearing activity on the HCSO TAC Central-A TG (14896). Does not
sound like normal TAC channel usage. At one point, I thought someone said
that it was being used for some other purpose but I can't remember what that
was. If someone knows who is using it and what for, please tell us.

I'm also still trying to figure out what the index numbers mean that
Lifeflight uses. Heard them today say they were "Kilo-7" because they had a
passenger in the front seat. This makes me think that the number is how
many souls-on-board. I can't believe that they get 7 people in that
Helicopter safely but I really don't know what it's capacity is. Now, what
is the "Kilo" part? I've heard them use anything from (I think) "Delta" to
"Mike". Could it be some status, or estimated time to scene, or estimated
time to base, or fuel status?

Finally, I want to put together a sort of glossary for listening to public
safety comms in the Houston area. Many people may not know what HPD means
by "take 8" or "he's in the number x lane".
Some praseology that I'd like folks to help me define are:
"S.O." - used when going on or off duty?
"O.D." - used when going on or off duty?
"switch" - go to a predetermined channel (who uses what channels?)
"go (North/East/South/West)" these are the HCSO TAC channels

I'd also like anyone to explain what the difference is between the TAC
channels 1-4 (IDs 12656, 12688, 12816, and 12848) and the HCSO TAC channels
North/East/South/West/Central (IDs 14768, 14800, 14832, 14864, and 14896).
Are the TAC channels 1-4 used primarily by the Sheriff's Department's
Districts 1-4 or do other agencies have these TAC channels? Who uses the
other TAC channels?

1021. BC245/Harris County

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-02-24 00:52:33 UTC
From: Adam
Topic: 1021 Message: 1021

Hello,

I also have some questions pertaining to a Uniden BC245XLT scanner
I just bought today. I want to use it primarily to listen to the Harris County
Sheriff's Department and the Constables.

I attempted to add a trunked group, but when I pushed "Search" after I
programmed all the frequencies in, all it does it looks like it's scanning
the frequencies and then pausing on some for just a second, then going
and scanning again.

I programmed in every frequency listed under "Downtown" on:
http://www.clarc.org/~kg5ai/freqs/harris.html

I also thought it might be the system type I was selecting could be wrong.
I tried E2-800, but with no luck.

If someone could just take a few minutes and maybe write me an email
(adam@...) off of the list and maybe give me what frequencies
they use (if they are trying to reach it off the downtown transmitter) and
how exactly they programmed that in. I live at Beltway 8 & I-10 on the NW
side of Houston.

I'm also having trouble programming in specific talk groups.

Very anxious to start listening..
Adam

E2-800 (800 MHz Motorola type II)

Make sure the radio is in trunk programming mode, set the trunking
type, and THEN enter all the frequencies otherwise it will think
they are conventional frequencies and won't track them properly.

Do you own one? If so, here is what I did

Pushed tracking and hold till i got a bank number, pressed 1..
selected E2-800..

entered all the freq's off of downtown listing on myles' site..
for harris county, got all the way to chan 30 and was down, then
pressed search and pressed bank 1 like it said, and nothing :(

if you have one maybe you could tell me what freqs you havei n
there

Myles,
As I understand it, the Fox unit is indeed the HPD copter. They now have a camera on it and Transtar has the ability to see what the helicopter is looking at when they have their video turned on. If I remember right, someone posted a message on this list when it was installed. So when you have the time, go back through the archives and see what you can find. It was either posted in December or January I believe.
On a related note, does anyone out there have the new Icom scanner with the LCD display? I was wondering if it has the ability to capture the video from the helicopter. The receiver is supposed to be able to tune up to 2.4 Gig, but I would think it would be pretty hard to pull the signal out of the air if you did not have some type of external antenna. Anyone have any comments?

Kevin R.

Those frequencies should work just fine. You may have to play with the ATT feature (ON if you are near a cell tower).

Make sure you have channel bank 1 selected as opposed to talkgroup bank 1 selected and that the radio is actually in trunk mode. Press search and IDs should start popping up on the display.

Check out the BC245XLT group on yahoogroups ...

The Microwave on Fox and several of the other helicopters in town is 6ghz. Transtar has the ability to lock in on all of those common freqs in the 6hz microwave band. Channel 13 uses those freqs also for their live trucks in the field.

Topic: 1029 Message: 1029

Kind of late in the game but I put together a list of frequencies and
talkgroups I've heard used at Galveston's Mardi Gras.
You can find the list at:
http://www.clarc.org/~kg5ai/freqs/mardi_gras.html

There was a helicopter (don't know whos) with two spot lights flying
around near the end of Mardi Gras Saturday night. I never heard them
talking on the radio. Anyone know who's helicopter it was and what
they miight use to talk with ground units on?

Besides the festivities tonight, there is only Fat Tuesday left.
I won't be heading back down there this time but if anyone else does,
check these out, see what you find and share it with the list.
If you get into the "box", you might want to take along an earphone
(hint hint).

Also, I've updated my Rodeo list with the help of Eric Carlson's list.
Looks like he hears the Rodeo stuff often from where he is.
It is at http://www,clarc.org/~kg5ai/freqs/hou_rodeo.html .

the link doesn't work

by the way,

"S.O." stands for "signing on" - they usually give a
four-digit pin number for their driver ID followed by
a four digit ID for their unit's shop ID after
"signing on"

Yeah, my primary web pages are down (again).
The backup is running on http://w5ac.tamu.edu/~kg5ai

I've made some changes to the lingo list after getting some emails and listening to the radio today.
I heard units on Precinct 2 Constables Dispatch say to "Switch". I think they went to the Pct 2 Admin talkgroup. I wonder if this is the plan, switching to Admin. Is it just the Constables that do this?

Speaking of the Constables, what is the Civil talkgroup really for and what is the real purpose of the Admin talkgroup? Sounds like they just use it for chit-chat.

Myles,
To answer your "switch" question, the units are using it as a back channel. You might here this a lot if you listen to SO. I know PCT. 3 uses "South" and "Pct. 3 TAC" for unit to unit Bs. You night also here units telling each other to "Go South." Each Pct. Is assigned a TAC for unit to unit traffic, also units will switch over if the dispatcher has to "Hold" all traffic on PRI for a unit. Now to the Constables..... The "civil" talk groups are Civil courts and there deputes. Also use it for civil cases and to serve folks.

I asked Myles this question, so I'll pose it to the group as well.

What are the Skywarn repeaters around southeast Texas.
I have this list, with help from Myles:

146.840 Houston
164.640 Clear Lake/Nassau Bay
147.020 Montgomery County/Conroe
145.490 Fort Bend County/Richmond
145.270 Chambers County/Anahuac ???
145.410 Galveeston County/Dickinson
147.140 Galveston County/southern mainland
146.680 Galveston County/island

What I'm looking for
Liberty County/Liberty area
Waller County
Brazoria County/Angelton area
Polk County/Livingston area
Walker County/Huntsville area
Bryan/College Station area.
Lufkin/Nacodoches area

Any help is greatly appreciated. Maybe if we get a list together,
this could be a seperate list on Myles' site??? :)

1036. Skywarn Freqs

Yahoo group: HoustonScan (1999 — 2002)

From: Myles Barkman
Topic: 1036 Message: 1036

A guy named Keith Brewster has maintained a list of Skywarn repeaters for the U.S. for several years now. It may not be complete but it is the most comprehensive list for the U.S. around.
Was just updated days ago.
http://www.galstar.com/~kbrews/radio/tx-s.html
If we can determine what all is used in Southeast Texas, we can email him with updates.

1037. Civil Air Patrol active

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-03-04 17:38:47 UTC
From: Myles Barkman
Topic: 1037 Message: 1037

The Civil Air Patrol has been conducting operations in flood-stricken areas in the Liberty County areas.
They have been doing fly-overs of the flooding and sending pictures via radio to the State EOC in Austin.
Comms can be heard on the following freqs:
148.125 Ch.2-Direct, Ch.19-Repeater
149.5375 Ch.4 for pictures (sounds like SSTV), now sending on Ch.19
122.700 CTAF Brenham Airport
122.750 Air-Air comms
122.900 CTAF Liberty Airport
Some air units are flying out of Brenham Airport, some are going into Liberty Airport

Units Heard:
"Cap Flight 4229"
"Highbird" believe this aircraft flies high over the area relaying info to State EOC in Austin, sort of like AWACS ops

Heard references to "Liberty Star" and "Liberty Mission"

If anyone else has further information on these Civil Air Patrol ops or frequencies relating to the flooding, pass them along.

I've been working on trying to figure that one out for days now.
I've heard that morse code ID weak every thirty minutes but never was
able to copy the entire ID. Ive got the last three numbers "209" and
it may even be "F209". It sounded like some kind of VHF or UHF link
like the one on 7888 and I've been waiting to hear some voice traffic
on it to help figure out what it could be. Good thing you were up to
catch that. Now I have something to go on. I wonder if it could be
a link to CIMA. Will have to check the callsigns of CIMA stations
and see if I get a match. The reason I'm thinking that is because
you said it happened at 3am which is one of the times CIMA conducts
their radio checks. It just so happens that all the Lyondell plants
do their checks at 3am as opposed to 6pm.

Good catch. The mystery may be over soon. Now which channel is it
linked to?

1040. HFD Questions

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-03-07 06:01:48 UTC
From: zulu
Topic: 1040 Message: 1040

Hi there,

If anyone can email me or the list back and answer some of my questions about the Houston Fire Department to make my listening expirience a little easier, I'd appreciate it.

- I have a list of apparatus, and I see specialized units like Tower 6. I'm guessing HFD doesn't staff a full crew 24/7 waiting to goto calls on this unit, so how does it work if they need it?

Would Engine 6 go out of service and then take Tower 6? How do specialized units like that work.. same question about Boosters, Evacuation Boats, etc.

- How does staffing work? Is every Engine, Ladder, Ambulance, Squad, etc in service 24/7 on rotating crew? Or do some units go out of service during slow times? If anyone has information on how that works, just out of curiousity.

- Does Houston provide or receive mutual aid from surrounding departments? if they do receive aid, is it often?

- When I listen to HFD I always hear the exact same tone. Now I know vol. departments use different tones to alert different stations. How does it work if they all have the same tone? Is every call sent to every station over an intercom or?

.. I have more questions, but I'll spare you all.. appreciate the help, this is a great list and I always receive great help. I'd like to thank everyone, especially Myles for his help!

zulu:)

1041. Re: [HoustonScan] HFD Questions

From: Allen Coe
Topic: 1040 Message: 1041

The only tones you hear on the UHF frequency are the alert tones (a warble tone on the EMS channel, and a boop tone on the fire channel). The house speakers and lights at each individual station are activated using a seperate frequency (microwave, I think). They also have some VHF paging on 154.160.

They mutual aid any department which borders Houston.

Hope this helped somewhat.

1043. 800 LTR System

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-03-10 20:26:16 UTC
From: bpckty1@webtv.net
Topic: 1043 Message: 1043

Following the recent purchase of a BC-780 XLT, I have been searching the bands for LTR and other systems (The quest continues). And, I have discovered an interesting, but large, group licensed to Repeater Communications. I have identified a few talkgroups and channels, but I would like a little help in finding the correct channel numbering sequence.

You may wonder why listen to a bunch of businesses, but when the storms come, the wrecker drivers provide valuable information since they are out there where the "hot spots" are.

Here is what I have gleaned so far:

All frequencies are licensed to Houston, except for two in Katy.

Two "guesses". 8 could be HPD Direct, 460.2250, or, it could be a
talgroup on the Galveston TRS, and one of the units did not have the
800 MHZ radio.

From: Myles Barkman
Topic: 615 Message: 1045

My primary web page has been down for quite awhile now. They've had problems with the server and I think I heard that they were moving it to another location. Hopefully, it will be back up soon and be more reliable. For the time being, I have my pages at http://w5ac.tamu.edu/~kg5ai .

I've since added this URL to the greeting for new subscribers to this list as well as every footer on messages through the list (and my signature).

Thanks for the good words on the list and web page. Wish I could fix the problems with the server but it's completely out of my hands. I'm glad I have a secondary site, though.

I'm in NW Harris County (Clay & Beltway 8) .. and at night I hear a lot of activity on 453.5000.. its on the same channel I listen to the HFD on, just whenever the HFD isnt talking and overriding them, I hear people talking about "Is he still there?" .. they discuss suspicious vehicles, suspicious persons, etc..

Any clues?
Thanks..

That would be HPD. I have had this problem for years when I am monitoring anything in the 440-500Mhz range on my scanners. They are apparently running a lot of power. For example, I am trying to monitor a fairly strong 440 repeater and someone at HPD keys up and overrides the 440 repeater. I am located on the SW side just north of Sugar Land.A friend of mine with his FRS HT had the same problem once or twice (though not as bad, his receive is not quite as sensitive).It doesn't seem to be the same HPD repeater either. I have noticed this from several different HPD channels (not all of them, though).--- zulu wrote:> I'm in NW Harris County (Clay & Beltway 8) .. and at> night I hear a lot> of activity on 453.5000.. its on the same channel I> listen to the HFD on,> just whenever the HFD isnt talking and overriding> them, I hear people> talking about "Is he still there?" .. they discuss> suspicious vehicles,> suspicious persons, etc..

Sigh...well, looks like my backup web site is down now too. I think storms must have knocked out the TAMU radio club's server yesterday but I figured it would be up by now.

So, for now, I am webpageless (if that is a word). I COULD put up another site but that would start getting rediculous.

I wonder if there are dark forces at work here keeping my pages off the web. Things that make you go "hmmm".

We had a pretty nasty lightning storm come thru here last nite about 3 AM. Dumping a lot of rain,
pea size hail and high wind. So it wouldn't suprise me if somethings not working right up here.
Plus its springbreak here and minimal forces are on campus (TAMU).

Topic: 1051 Message: 1051

453.500 is HFD channel 2 Dispatch. For some reason, this, as well as 453.425, channel 1 Dispatch, is very powerful, and will bleed over just about any UHF frequency in your scanner, especially in the downtown Houston area. This is especially true for Uniden/Bearcat scanners.

HPD uses 453.550 as a car-to-car frequency. It is also used by Memorial Villages/Spring Valley/and Hedwig Village police departments as a car-to-car frequency known as Tri-Cities. The frequency is also used by Jacinto City for their fire department.

Hope this helps.

Topic: 1053 Message: 1053

I'm in Seabroook. 154.385 is the Seabrook fire department.
Lately, I've been getting interference. It sounds like someone keys
up, I hear a squelch tone (like HFD does when it arrives on scene)..
sometimes, I can also here a half second of the NOAA weather radio in
between bursts. I have a regular scanner antenna about two stories
up. Any ideas?

I could be wrong, but could it be 866.5125?? (npspac ch. 2, 800mhz "mutual aid" channels) If it
is then its a conv type channel-not on the trunk.

I know the La Porte Fire Dept. uses 10 codes.
They use the following:
10-8 In route
10-23 On location
10-24 Returning to service
10-19 Disregard
10-9 Repeat transmission
10-8 radio contact - In service in their district

You are correct. Try 866.012, 866.512, 867.012, 867.512, 868.012 These are non trunked and are used state wide.

Just for everyone's info, here's how the ITAC/NPSPAC channels are layed out on the Montgomery County S.O. radios;

NPSPAC 1 - 866.0125 mHz repeater
NPSPAC 2 - 866.5125 mHz repeater
NPSPAC 3 - 867.0125 mHz repeater
NPSPAC 4 - 867.5125 mHz repeater
NPSPAC 5 - 868.0125 mHz repeater

ITAC 1 - 866.0125 mHz simplex 5 watts
ITAC 2 - 866.5125 mHz simplex 5 watts
ITAC 3 - 867.0125 mHz simplex 5 watts
ITAC 4 - 867.5125 mHz simplex 5 watts
ITAC 5 - 868.0125 mHz simplex 5 watts

TAC 1 - 866.0125 mHz simplex 1 watt
TAC 2 - 866.5125 mHz simplex 1 watt
TAC 3 - 867.0125 mHz simplex 1 watt
TAC 4 - 867.5125 mHz simplex 1 watt
TAC 5 - 868.0125 mHz simplex 1 watt

Here's a challenge for you all.
Sounds like a repeater operating with an output of 151.335 MHz (or close) with PL 173.8 Hz.
Don't know what input is but all it does is send out short bursts of data every so often.
Sort of strong southeast of Houston.
This lies between two otherwise allocatable(sp?) frequencies of 151.325 and 151.340 MHz.
151.340 MHz is licensed exclusively to Texas Parks and Wildlife. They use it mostly at parks for on-site ops in simplex mode. It is used locally and this thing must be bugging the crap out of them. TPW does not use PL on this freq.
151.325 MHz is licensed to the State as well but nothing around here.
I wonder of this has anything to do with the interference that Josh talked about with Seabrook.
Josh, if you have two radios, try putting one on 151.335 and the other on 154.385 and see if the data bursts you are hearing coincide.
That may help us narrow down the location. It could be close to you.

This weekend was the Children's Festival in downtown Houston. Looks like they were using the Kellogg's Brown & Root 900 MHz trunked system.
Those of you that can track 900 MHz Moto systems might keep this in a bank since you never know what/who might pop up there next. These folks are always loaning out radios for special events.

Hello Myles, did your little experiment (programmed the one scanner with 151.335 and kept the other on 154.385)..

I heard the bursts on 151.335, and the station was kind of weak. It did not match the ones I heard on 154.385.

I only get it on occassion (when DXing is good). I'll try and record it next time I'm getting it, not getting it tonight.

When it does happen, I can hear snippets of NOAA Weather radio (or as my girlfriend calls it, the Robot guy :))
Speaking of NOAA Weather radio, the NWR site now has 5 voice samples and you get the comment on them.

DGPS is a way to get a more accurate way of getting positioning by using a land based fixed beacon with the GPS Signalling from the Satallites. AGishing vessel's use it as well as survey crews to get accurate locations. The Differential (That is the D in DGPS) is usually an HF signal, but there is certain equipment that handle a VHF signal. It is kind of like the old Loran-C, but not the same.

The SA (Selective Availability) feature of the GPS satellite system was turned off last year. The need for the extra positional accuracy provided by DGPS is reduced. I expect this term (DGPS) to become less familiar to folks as time goes by.

Don't know if they are still in business but there used to be a company called RDS that provided a DGPS corrrection signal piggybacked onto a broadcast FM carrier (like SCA or Muzak). That was a while back.

1069. Mystery solved

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-03-20 23:34:01 UTC
From: Myles Barkman
Topic: 1069 Message: 1069

Well, I figured it out last night but didn't get a chance to email it out.
I figured out what that data repeater was.
It is licensed as WPPD327 and belongs to Pioneer Concrete Company of Texas, Inc.
There is something to be said for knowing Morse code.
The problem with this transmitter is that it is licensed for 151.535 MHz, not 151.335 MHz. Close, but we aren't playing horseshoes and hand grenades.
This could be a serious issue if it had been interfering with a public safety frequency. As it is, it is probably just pissing off some of the Parks people who use 151.340 MHz. They don't know what it is and what to do about it.
Particulars on the repeater are: PL 173.8 Hz, input 159.885 MHz, located at 601 Milam Street about 1000 feet in the air (pretty nice, eh?).
The transmitter power output is 110 watts but the ERP is 65 watts. Not too good of an antenna or they are losing lots of power through the cable.

I imagine that one the FCC hears about this little SNAFU, and that they are potentially causing harmful interference to a legally licensed State agency, that it will be fixed soon.

Oh yeah, I do remember the DGPS stuff on the business freqs up there. Really sucked. I hear what may be the same stuff down here also on the VHF business channels but there's just no telling what it could be. Data transmitters are so hard to track down that I think there's quite a bit of unlicensed activity going on around here.

1071. hi-band?

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-03-22 06:56:02 UTC
From: zulu
Topic: 1071 Message: 1071

I listen to Cy-Fair VFD and some of the surrounding area FD's and I hear sometimes then referencing to their "high-band" radio and certain channels. Seems like they use it to contact Lifeflight and other agencies. Is this high-band radio just have access to certain talkgroups on the Harris County System?

Or how does this work? Anyone know? If so, if anyone knows what "channels" reference what talk group/frequency, so I know where to listen when they switch to that, let me know.

Thanks:)

and other agencies. Is this high-band radio just have access to
certain talkgroups on the Harris County System?

Or how does this work? Anyone know? If so, if anyone knows what
"channels" reference what talk group/frequency, so I know where
to listen when they switch to that, let me know.

Thanks:)

High-Band is just actually short for VHF High Band which is anything 100 mhz to 200 Mhz. VHF Low Band is Anything Below 100mhz to 30 mhz.

When refering to 800 the normally say, county radio, 800 radio, or mention a specific talkgroup. Lots of slang around town for Radio Equipment.

I listen to Cy-Fair VFD and some of the surrounding area FD's
and I hear sometimes then referencing to their "high-band" radio
and certain channels. Seems like they use it to contact Lifeflight
and other agencies. Is this high-band radio just have access to
certain talkgroups on the Harris County System?

Or how does this work? Anyone know? If so, if anyone knows what
"channels" reference what talk group/frequency, so I know where

Cool, thanks, but anyone happen to know what exactly Cy-Fair VFD's
high band system is on? What freqs and what they're used for would be
cool.. thanks..

Sandyj,
While I'm not an expert at this, I believe this system is a Federal system that utilizes the Motorola digital encoding know as ASTRO. So therefor there is no "cheap" way to listen to it. I say cheap because I have looked on the web at a place in Japan that claims they have a digital scanner. But it something like $3000.00. I do not believe that the Houston Astros Baseball Club is on this system.

Kevin R.

Nothing like hearing the Brapp--Brapp--Brapp of the Astro's Batz... ;^>

Try the below frequencies for Astro Games.
Note, they are business frequencies and there are other users, including an LTR trunked system, so your best results will be by either using your radio's attenuator, or by disconnecting the radio's antenna.

Any help with the DPL tones would be appreciated.

Thanx

From: Myles Barkman
Topic: 1087 Message: 1087

This weekend, there will be a static air display at Hobby Airport. Will be April 7 and 8th from 10am-5pm.
Don't know what kinds of comms may be in use but if you have EDACS capabilities, try listening to the Aviation Department to see what might pop up.
Might also check various VHF/UHF simplex business channels.
For more info on the event, check
http://www.haac.com/hobbyfest/hobbyaerofest2000.html .

What about when I heard a dispatch like this tonight;

"Attention pager 111, Engine 69, Ladder 69, Rescue 11.. Elevator Rescue"

What's pager 111? Who is that? How does that work?

Anyone have like a list of all the unit signs, dispatch info, etc on like
a website or anything? Any info would be helpful.

Thanks

From: bpckty1@webtv.net
Topic: 1091 Message: 1091

Anyone notice that the Downtown site has been using 860.2125 as the control frequency lately?

Could this be related to the previous posting about Chambers County coming on line with Harris County, or just to give the 860.2375 control frequency a rest?

FYI - Unit 111 is the District Chief in charge of Rescue. He is Joe Clark and is a super nice guy. THe designation is the way it is because he used to be housed at station 11 (also a Rescue Truck station off of I-10 and T.C. Jester), and the old designator for District CHief's used to start with a "1" thus "111". He no longer is stationed at eleven's but is housed at Rescue Headquarters which is old fire station 15 off of N. Main and Tabor. He drives the city's only white Excursion which has more lights and antennas than mine (and he's darn proud of 'em!!). Hope this helps!

Also Cy-Fair's dispatch channel is rebroadcast from a tower of theirs at station 9 (central in their district) on 157.450 Mhz. If station 9's tower can receive the Low Band radio traffic it is then rebroadcast on the High Band channel. Their pagers are on High Band thus the need for the rebroadcast so once dispatched pagers can continue to receive radio traffic of other units.

Looks like the same talkgroups as on their own system. See Myles' Chambers County list. It appears that the radios must have had just their control channels reprogrammed to the Harris County system.

From: Myles Barkman
Topic: 1101 Message: 1101

If you missed the tractor trailer pursuit, you really missed something.
Hope no one was seriously injured. What a whacko!

Anyway, found a few things of interest.
Houston FD has a VHF repeater on 153.890 with 154.310 MHz input. Don't know
what they use it for. Never actually heard anyone on it.
This is the same repeater pair for Highlands FD but input and output are
reversed.

Also, found an ambulance service using 463.650 MHz with PL 162.2 in the
Clear Lake area. Might be Genesis. Anyone with info?

It's going to be busy on Galveston Island this weekend. Be prepared for
anything!

And, it was intereting listening to Baytown, Harris County Sheriff, and (now) Chambers County Sheriff as they raced/chased along.

Didn't monitor HPD, though. Anyone know what channel they began the chase on, and if they switched to Citywide or stayed on their primary?

And, in case you didn't notice, the spikes did not seem to affect the truck's tires. It looked like the DPS's buckshot was the only thing that stopped the truck.

1105. Another Chase

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-04-20 01:35:06 UTC
From: bpckty1@webtv.net
Topic: 1105 Message: 1105

Last night, 4/18/01, about 9-10PM, Chambers County was somewhat involved in another chase. This was a DPS chase from Jefferson County (Beaumont). DPS ended the chase around the county line before Chambers County SO arrived, but Chambers County SO did continue to help wrap up the scene.

Looks like Chambers County will be a "hot spot" to listen to.

What an introduction to Harris County's new addition. Two chases in the first two days.

It was on South Central 460.550. Citywide was being used for an escort near downtown.

The interesting thing this chase started near the same area as the bus chase some years back. They almost traveled the same route.

This time Channel 11 had their helicopter on Truck and the last time Channel 26 had their helicopter on the bus.

From: Alberto Rea
Topic: 1107 Message: 1107

Has anyone seen weird "800" or high band antennas attached to a small box on street lamps? What are they for? There is one right down the street about 100 yards from here and i still have yet to know what they do...It has a little sensor attached to the one already in place on the top. What are they used for? And what frequency? I have seen these around east Houston/Pasadena. Lawndale area near Lyondell.

It sounds like you're describing the 900 MHz antennas that are a part of the Ricochet network. If I remember correctly it works in the same portion of the 900 MHz spectrum as cordless phones, etc. and it is spread spectrum. Metricom owns the network and provides wireless Internet access using it. For more info see http://www.metricom.com/

It was great. I had the TV going with 3 scanners, although the wife was not to happy with all the noise when she came home.

Interesting after thought. The HPD officers and sheriff's dept. were very cautious about not making the chase worse than it had to be by not pursuing the guy too close. The DPS on the other hand were very bold in their actions. I don't have an opinion one way or the other. Just glad no one was killed. I think the fatality accident which the news crews were reporting was not a result of this chase.

I'm not too "what kind of antenna is that?" savvy, but I know around here on some of the street lights there are small white boxes with small antennas coming out of them. I've heard and assumed prior that it had to do w/ wireless internet (www.ricochet.net) which has installed wireless internet all over Houston.

Maybe that could be it?

Adam

1119. MS 150 Update

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-04-21 16:15:05 UTC
From: bpckty1@webtv.net
Topic: 1119 Message: 1119

The ride came near my house, so I checked out the route (FM 529) and one of the break spots (Break Point One, Fry Rd, just north of FM 529).

The Bike Run primary is 146.720R/146.120I, T123.0, and it appears that they have a portable repeater that has an east-west orientation. Reception about a mile or so south of FM 529 is very weak. The Medical Net is on 443.650R/446.000I, T131.8. And, unfortunately, the ambulances have been used. The 145.190R/ is still the Admin Net for general information. I did hear some weak HPD Ch 8, 460.225, conversations that appeared to be race related, but that was around 7:30AM, and none has been heard since, nor was any heard while I was on FM 529.

Security/Traffic Control/Escorts is provided by several agencies. Houston Police has a large presence with their bicycle officers, support van, and patrol cars. Harris County Constable Precinct 5 has several officers in their personal vehicles and on bicycles and motorcycles. There was also an motorcycle officer in a brown uniform, but I couldn't see the patch, so he could have been from either the Ft. Bend County, Waller County, or Austin County Sherff Department.

Several private ambulance companies are providing EMS transportation, and, unfortunately, they have been needed. Also, there are medical personnel riding the route who appear to be Houston Fire Department personnel.

It is interesting to see the various types of bicycles on the route. There are some very creative designs. But, the ones that I think will not finish the trip are the low riders, the ones with ape hanger handlebars, and the unicycle. This observation is based on their position in the pack... They passed my position at FM 529 and Porter Rd., just before the announcement that Break Point One was closing.

It might have to do with DPS operating in a more open/rural environment
with less concerns for running into people or property.

1122. Beach Party 2001 (Kappa)

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-04-22 15:53:09 UTC
From: Myles Barkman
Topic: 1122 Message: 1122

Here's some info on what to listen to for Beach Party 2001 in Galveston:
PL/DPL Freq Usage
136.5 158.775/155.925 specific use unknown (used to be Galveston Beach Patrol-moved to 800 trunk)
162.2 155.445 DPS command post-running on simplex and has base station set up
351 464.500/469.500 "Command Post"
Galveston County Trunk System Talkgroups:
50032 GCSO South Patrol
50960 GCSO Beach Patrol-1
50992 GCSO Beach Patrol-2
51024 GCSO Beach Patrol Supervisor
51056 GCSO Reserve-1
51472 City of Galveston EMS-1
51504 City of Galveston EMS-2
52208 City of Galveston PD - 1
52240 City of Galveston PD - 2
52272 City of Galveston PD - 3
52304 City of Galveston PD - 4
52336 City of Galveston PD - 5
52368 City of Galveston PD - 6
52656 City of Galveston FD-1 (dispatch on 52663)
52688 City of Galveston FD-2
55984 Galveston County - Event A
56016 Galveston County - Event B*
56048 Galveston County - Event C* (hear local Galveston County agencies)
56080 Galveston County - Event D*
56112 Galveston County - Event E
56176 Galveston County - Event F*
56208 Galveston County - Event G
56240 Galveston County - Event H
56272 Galveston County - Event I
63440 City of Galveston streets-barricades
63632 City of Galveston streets?

You will notice that many of these are the same as used for Mardi Gras.
Don't know what the specific use of each "Event" TG is. Most traffic heard on B,C,D,F
Many outside agencies have come in to help with manpower.
Their radios were programmed by Galveston radio folks with certain freqs/talkgroups to be able to talk to everyone else.
I figure that depending on the radio system that the folks use at home, that is the band they are operating on.
For example, Polk County is on VHF at home, so they may have their radio programmed on 158.775 MHz. (not confirmed)

Other agencies that normally use UHF may be the ones operating on the 464.500 MHz repeater. (not confirmed)
Everyone else that has access to 800 MHz radios have been programmed with the Event channels and possibly GPD channels.
Helicopters have been flying up and down the Seawall and you will occasionally hear one on GPD-1 (52208)
Did not hear any activity on the ITAC (NPSPAC) channels as I did for Mardi Gras. Perhaps the event is too spread out for the lower range you get on 800 MHz simplex.
I'll try to update as I find more info. If anyone else is scanning, share what you hear.

Date: 2001-04-22 22:21:57 UTC
From: ASA 001
Topic: 1123 Message: 1123

Looking for a list of frequencies for Houston Center ATC.

Any webpages with this info? Could not find one by searching.

Thanks.

1124. NASA on the scanner

Topic: 1124 Message: 1124

I've down in the Webster area and wanted to report that I'm
listening to shuttle audio on 171.150 in case anyone is interested.

Wondered if they were still using that frequency. Low power and used for a very long time now.

At least 20 years I think. There was a period of time where it didn't seem to work so it must have gotten fixed. BTW I wonder why the hams on 146.64 don't re-transmit the shuttle audio anymore? I sure miss it!

I know along hempstead hwy there are antennas above light and also on some signals. I was told they were a project by both transtar and Texas A&M to monitor driv times on certain roadways. Motorist have a pass like the ones you get from the toll road . and thats how they monitor the flow. Maybe the ant. your seeing are part of the same project

1134. Presidential Visit

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-04-27 03:28:17 UTC
From: bpckty1@webtv.net
Topic: 1134 Message: 1134

A short report on what was heard today during President GW Bush's visit to Houston today.

The Secret Service lived up to its name: Secret. Except for Baker, 165.7875, where traffic concerning Tranquillity, Tracker, and Transport were heard in the clear, and a couple of agents once on 165.6875, comms on 165.5125, 164.8875, and SS Primary, 165.3750 were encrypted.

Houston Police were heard on 453.9000 (IAH 453.700-- downtown tower/Hobby link), 460.4000 (CID), 460.4250 (Citywide-- motorcade), and 123.0250 (helicoptors). Channel 8 (Direct) traffic was not heard due to the distance from the action downtown to my house in the boonies.

Fox did a good job coordinating with the media (as well as the other Fox units), keeping them far enough away from the "forbidden" areas, but close enough that they could, if desired, get good videos of Marine One and the motorcade.

My scanner did receive some traffic on 166.4000, but I am unsure if it involved the visit. When Marine One lifted off from Memorial Park, the scanner received a hit on 138.1750, but, again, no speech was heard, but it lasted longer than a "burp" that occasionally occurs. Could it possibly be military-related secure traffic from Marine One as it occured shortly after the helicoptor lifted off from the park?

Finally, about 4:30PM, while Marine One was enroute to the park, comms were heard on 142.2000. I doubt that these were Presidential Visit related, but they were definitely between military pilots talking to each other, and they seemed to be in the area of the park.

1135. Yes, we're going there!

It's time to start revealing the businesses and public safety agencies that operate without a valid FCC license.
These can be folks who never even had a license to folks who had one but let them expire.
They could be doing it unknowingly but ignorance is no excuse.
Some of these people have even been told that they are not licensed and continue to operate.
I've developed a sort of "award" for those special people who can't seen to get with the program.
It's called the "Shame on you" award and simply consists of getting a special place on my web page where anyone can see what's REALLY going on.
If you happen to be one of these unlucky recipients of the "award", don't cry to me. When you make amends with the FCC, you'll have your award retracted.

To view the "winners". check out the bottom part of the Freq Page at http://www.clarc.org/~kg5ai/freqs/freqs.html.
The list itself is at http://www.clarc.org/~kg5ai/freqs/shameonu.html.

If you know that someone on this list is no longer using the frequency, let me know.
If you know of any other folks not licensed for their radios, let me know.
Maybe you can suggest other names for the award: "Dirty Laundry","I don't need no stinkin' license", etc.

1136. March of Dimes WalkAmerica

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-04-29 11:03:49 UTC
From: Myles Barkman
Topic: 1136 Message: 1136

The March of Dimes is having a Walk at Ellington Field this morning. I'll be out there helping the hams with communications. We will be on 442.750 MHz repeater and 147.420 MHz simplex. I'm not sure who or what else will be out there with radios. Last year, media was out there with a live remote. I may be too busy doing my own thing to find stuff so if anyone in the area cares to search for stuff, that would be great.
I've been told that we will have access to the on-site ambulance for any incidents but it is not allowed to leave the grounds. If we need transport off the "base", we will have to call Houston. There are supposed to be some medical types on bikes. Wonder if they have radios.
Base security is on 163.4875 MHz and Fire Department/(EMS?) is on 173.5875 MHz.

The kicker is that there may be protesters out there and security is concerned. "Who" might you say would be protesting March of Dimes? Animal rights activists. Guess how MOD tests their treatments. The problem lies with the possibility that they may have pamphlets/papers whatever, and that is not a good thing to be sucked into a turbojet. So not sure how that will play into the comm situation. I believe that HPD was out there last year using 460.225 MHz.

1137. Kellogg Brown and Root Event Happenings

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-04-30 03:32:26 UTC
From: bpckty1@webtv.net
Topic: 1137 Message: 1137

Well, a busy weekend on the Brown and Root System. I put the 780 on search and during my errands caught too many talkgroups to post. Most of the the "standards" that were used at the Rodeo and other venues were also used at the Houston Festival.

It was interesting to hear that the Volunteers had their own separate talkgroup from the rest of the Houston Festival operations:

1616

Some new ones (to me) were heard for the Special Olympics and the March of Dimes Walkathon. There were others that were found, but so far have not been identified, so they will be programmed into the scanner to await the next flurry of events.

We must thank Brown and Root for being such a good corporate citizen for their great support of the various charities and events here in Houston.

Special Olympics

6112 appeared to be event primary, but others were in great use
2096

1140. re: Harris County

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-05-09 04:37:54 UTC
From: Myles Barkman
Topic: 45 Message: 1140

Confusing...I guess I can see that. I put more information than the regular scanner listener needs in the lists and it can be cluttered/confusing if you don't know (or care) what the symbols mean.

In plain English, here's what the downtown site SHOULD be using these days. Chime in if you know different:
856.2125,856.4875,856.7125
857.2125,857.2375,857.4875,857.7125,
858.2125,858.2375,858.7125,
859.2125,859.2375,859.4625,859.4875,859.7125,
860.2125,860.2375,860.4875,860.7125,
866.075,866.425,866.4625,
867.0625,867.5375,867.9125,867.9375,
868.2375,868.4875

This is 28 frequencies which happens to be the maximum number of frequencies that be used off of one control channel (one site).
If you are looking for freqs from one of the other sites, just look at the list and take out all the funny characters and comments.

Depends on what you are hearing. This frequency is used by the US Postal Inspectors in the Houston area. Also try 415.050 mHz. Both tended to be in digital a lot, but not always when I was
in Houston last.

Chris Parris

1145. Pasadena Strawberry Festival

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-05-11 13:53:09 UTC
From: Myles Barkman
Topic: 1145 Message: 1145

The Strawberry Festival is here again. Tomorrow is the parade through Pasadena around 10am.
The following Friday, Saturday and Sunday is the Festival at the Pasadena Convention Center.
These are frequencies used by the Festival Folks but watch out, there could be more. The Convention Center folks will no doubt be talking on their talkgroup on the Pasadena trunk system.

Pasadena Strawberry Festival:
156.7 461.4375 *BUSINESS Pasadena Strawberry Festival Ch.1
156.7 461.5875 *BUSINESS Pasadena Strawberry Festival Ch.2
156.7 461.6625 *BUSINESS Pasadena Strawberry Festival Ch.3
156.7 461.6875 *BUSINESS Pasadena Strawberry Festival Ch.4?
156.7 461.1125 *BUSINESS Pasadena Strawberry Festival Ch.5

Pasadena Police may be assisting with parking at the event and you will find them on the trunked system as well.
Some vendors may be using their own radios to support their operations.
Of course, there will be action on FRS channels.

From: albertorea@webtv.net
Topic: 1147 Message: 1147

Well i am glad to say that my battery(NI-Cad) died and after trying to rebuild it my self and i lost my scanners memory twice! i found this site http://www.primecell.com and was amzed i ordered my battery on wednesday and it was shipped on Thurs and i got a New NI-MH 1600 mah battery pack (got it yesterday). They have all types of batteries for every radio and device you can think of (except LI-ON). Please note i do not work for these people i just did business with them and am very sastified. Battery prices range so you might get lucky.

1148. PRO2067 Question

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-05-16 15:06:26 UTC
From: msuggs@ix.netcom.com
Topic: 1148 Message: 1148

I've just installed a PRO2067 in my truck and noticed that everytime you turn on the scanner it stays on channel 1, doesn't scan immediately. Is there anyway to have it immediately start scanning when the radio is turned on? It's very frustrating to have to also press the scan button everytime you turn the unit on. Also, how do you activate the "PL" feature, I know it reads PL's but if there's several different agencies using the same frequency, there's got to be a way to filter out all but the agency you want to listen to.

Thanks,
Marvin Suggs

1149. Re: [HoustonScan] PRO2067 Question

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-05-17 03:36:44 UTC
From: sly.debbie@verizon.net
Topic: 1148 Message: 1149

nope-there's no way around the radio powering up in manual mode. You can go ahead and push scan
twice while you see the welcome screen to get it going.
As for the pl thing-you have to put the radio (bank) in closed mode and have it scanning in order
for the radio to stop on just that one particular pl. Unfortunately even when in closed mode
while sitting "manual" on a channel the radio will still pass all traffic. Anyway you set the pl
for a channel by using the step key while in program mode.

Someone named "Senior 18" was dispatched to Hobby Airport for a Hazmat incident. Who is this?

Anyone have a list or anything compiled of radio signs/call signs/who people are? Anything would be appreciated

Topic: 1150 Message: 1151

That was most likeley one of the Senior EMS Supervisors. They were housed in station 1 which is now closed so they have relocted to station 15 and station 18 (a while back the ems supervisors were designated 1101 and 1102)
There are also 'regular' ems supervisors at stations 4-16-29-30-57-82.

From: zerg90@webtv.net
Topic: 1154 Message: 1154

Does anyone know where the units from Houston Station 1 have been reassigned?

Anybody know what A508, A510, etc are?

Anybody have a list of all the new EMS units?

Does anyone know who dispatches the Brook FD on Middlebrook Rd, and the Mount Houston VFD? I have never been able to figure out if the County Sheriff Office or the 911 Center dispatches the fire units in the Aldine / Westfield Road areas.

Just call me "Wondering in Beantown"

1158. New 780 Stuff plus Software to watch Multinet

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-05-18 22:40:42 UTC
From: mholland@ev1.net
Topic: 1158 Message: 1158

There are 3 Multinet systems in Houston: METRO, Phillips 66, BP/Amoco Refinery Texas City (Being replaced with Smartnet this year)

NEW SCANNER MASTER PRODUCTS TO BE PRESENTED AT DAYTON HAMVENTION
BC-780 AUTO-MUTER
The Auto-Muter (we need a better name!) plugs into the serial jack of your BC-780 and automatically mutes the 780 audio upon transmit of a "local" two-way radio. The primary market for this device is for public safety vehicles, Hams with rigs in their cars, and buffs with two-way capability who have a 780 mounted alongside a two-way of just about any type.

As soon as you transmit, the Auto-Muter senses RF and mutes the audio of the scanner. MUTE ON appears in the display of the 780 for the duration of the transmission and an additional 2-seconds (although this may be adjustable). The device will prevent feedback noise during transmissions and by automatically muting the scanner any ambient noise from the radio will not be heard during the transmission.

Sensitivity is adjustable and the device is tuned to a particular band by means of a small wire. The device itself is the size of a small DB-9 connector and requires no power as power is supplied through the RS-232 port.

The Auto-Muter will be demonstrated at Dayton and production of the device is expected to begin in 4-6 weeks. Price has not yet been determined but will likely be in the $29.95 to $39.95 range.

SMARTLINK FOR THE BC-245 and BC-780
Our original Smartlink product allowed you to connect an Optoelectronics Scout to a Bearcat 245 and "Reaction Tune" it as well as store hits in memory as you scan. While the device was never designed to work with a Bearcat BC-780, many customers tried it and found many of the functions did work correctly, but not all. Version 2 of SmartLink now works with the BC-780 completely. The device senses which radio it is connected to and operates seamlessly. The product has dozens of modes of operation and requires no power (supplied through RS-232).

SmartLink Version 2 will be on sale in limited quantities at Dayton and afterward from Scanner Master.

J-Trax EFJohnson Multinet ® Tracking Software
Joe Cardani, who brought us the terrific G-Trax software program for tracking Ericsson systems has done it again! Scanner Master will be the exclusive distributor of Joe's J-Trax Multinet tracking software.

The software was announced at the recent East Coast meeting of APCO in Lancaster, PA. A flyer detailing some of the features of J-Trax will be available at the Scanner Master booth. J-Trax still requires a small amount of final development and likely will not be available for sale until late Summer. No price has been announced.

If you live in places like Chester County, PA, Martin County, FL, Tucson, AZ, Bloomington-Normal, IL, Houston, TX and others with MultiNet you'll definitely want to stay tuned.
Copyright © 2001 Strong Signals
Scanner Master continues to work on the Remote Head for the 780 and, through our partnership with Greg Knox, work on the digital board is also continuing.

Scanner Master can be reached through our web site scannermaster.com or by calling 1-800-722-6701 for orders and 781-292-1010 for questions. Send e-mail to info@....

1159. Kemah Fire Department

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-05-19 03:17:09 UTC
From: Myles Barkman
Topic: 1159 Message: 1159

It appears that Kemah does not want to use the Galveston County trunked system for their Fire Department communications.
They've just recently started using a repeater on 158.895 MHz which does not appear to be licensed to anyone in the area.
The input, 156.150 MHz, was licensed to the City of Shoreacres, a few miles up the road, which no longer holds the license.
Another recipient of the "shame on you award" and another unsatisfied customer to the migration to trunked systems.
Does anyone know why Kemah did this (financial, political, poor coverage)?
Heard units talking to Kemah PD on this repeater as well. Kemah PD had completely switched over to the Galveston County system. Are they thinking of changing plans as well?

1161. Talkgroups and frequencies for the Baytown area

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-05-19 09:15:30 UTC
From: cmahlstedt@excite.com
Topic: 1161 Message: 1161

I need the talkgroups so I can listen to Baytown FD only. I also need a list of freq's they are on. Can anyone help? Thanks, Chris

1162. Baytown FD

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-05-19 14:55:28 UTC
From: Myles Barkman
Topic: 1092 Message: 1162

```
To monitor Baytown FD, program in the Baytown site trunk freqs:
866.100 (primary control channel)
866.550
866.950
867.375
867.950
868.050 (secondary control channel)
868.250
868.650
868.775
868.9375

All the Baytown FD talkgroups are listed below:
16368 3FF *Baytown Ch.A14 Fire Admin.
16432 403 *Baytown Ch.A16 Fire 1 (Dispatcher simulcast on 154.250 MHz)
16464 405 *Baytown Ch.A15 Fire 2
16912 421 *Baytown Ch.A12 FD Ops TAC 6 (primary working channel)

If you want to just hear dispatches, you can still hear the station
tone-outs on 154.250 MHz.

I don't know all of the new EMS units that Houston has added, but with regard to A508, A510, etc, these are second ambulances stationed at stations 8, 10, etc. I think there is also one stationed at 28.

Subject: [HoustonScan] ??? About Houston FD

Does anyone know where the units from Houston Station 1 have been reassigned?

Anybody know what A508, A510, etc are?

Anybody have a list of all the new EMS units?

Does anyone know who dispatches the Brook FD on Middlebrook Rd, and the Mount Houston VFD? I have never been able to figure out if the County Sheriff Office or the 911 Center dispatches the fire units in the Aldine / Westfield Road areas.

Just call me "Wondering in Beantown"

1172. Fire Boats along the HSC

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-05-20 15:30:17 UTC
From: d952@mohaveaz.com
Topic: 1172 Message: 1172

New 2 the group. Looking for info re: Fire Boats along the Houston Ship Channel. Public Safety Agency or Corp that ownes & operates. From where (specific location). Unit ID. Type/kind of vessel.

Example: On my map there is a fire boat station located along the southern shoreline above Herman Park and east of Brady Island. Looks like sta's 22 (Haz Mat),23, & 42 (Heavy Rescue) are closest stations to this fire boat station.

Any info for this particular station?

Thanking you in advance
Danny McLean

From: Ed Lentz
Topic: 1172 Message: 1173

Best I can remember they are owned and operated by the Port of Houston not HFD. The crew on the boats are employed by the Port of Houston, There are three stations, one just off Concret street just east of the 610 (Sidney Sherman) bridge, another at the mouth of Greens Bayou and another at Morgans point. Excellant restraurant at the tip of Morgans Point and you can see the fireboat from there.

1174. Mount Houston and Brook FD

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-05-21 03:20:07 UTC
From: joegay@frognet.net
Topic: 1174 Message: 1174

The Aldine Westfield areaa departemnts are dispatched by "North Harris County Dispatch" (NHCD) which contracts with several departments. NHCD is a privated company apparently located in the Aldine Westfield area. The departments dispatched are Aldine VFD, Westfield Road VFD, Eastex VFD, and North East VFD. All are dispatched on 33.86. I understand NHCD will be or has just begun to dispatch several department to the esat of their current area including the Beaumont Rd. VFD. I have no info on frequencies. Close to Aldine, Little York VFD and several departments to the north: Champions, Klein, Spring, Ponderosa are dispatched by another private operation which identifies itself as "Com Center." Mount Houston VFD no longer operates. It was a very small and economically stressed department. Eastex and/or Northeast apparently cover the old Mt. Houston area.

I am told that Brook FD is just east of Highway 288, possibly in Brazoria County so you might check that county's listings. Since the question was from Boston, MA, I'll mention that Aldine etc are on the far north side of Houston, Brook FD (if the info is correct) is south of Houston.

I might mention that I'm a former Huston area volunteer firefighter and buff now living in Ohio but maintaining contacts in Houston. Just found the Site yesterday and really like it.

1175. Bearcat 245xnt and scanning

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-05-21 15:26:07 UTC
From: sandmanx
Topic: 1175 Message: 1175

I was able to find a 245xlt at Fry's on Saturday. Now that I have it,
I can't figure out how to scan trunks with it. The problem is it is not programming like the manual says.

It doesn't ever give me the option to choose the system I want to track. I'm guessing this is the reason why it isn't picking anything up. I'm trying to listen to the galveston county truck system, and if
I manually go though the channels, I can hear conversations, but when I scan, I get nothing.

Does anyone know of a good site to tell how to start scanning with this radio? The version of the ROM is 1.00, the serial number seems to indicate this is a fairly new model.

Thanks to all for the info. I have heard some of the action on 33.86 via skip - and they sounded the same as the other FDs north of Houston (33.90 - 33.88 - 33.62 - etc), so I was wondering if 1 big dispatch center covered them all. Now I know the answer - thanks.

I misspoke when I asked about Brooks FD. Breaking out the handy Key Map Atlas, I find that I was thinking of Middlebrook FD at 16506 Middlebrook Drive near Clear Lake City. I think they both used 453.10. Anyone know if they are still in operation, or have they been usurped by the Houston FD?

I might be 2000 miles away, but there were days when the Houston area units would come in louder than the Boston area units. Not that thats a bad thing :-)

1177. RE: [HoustonScan] Mount Houston and Brook FD

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-05-21 20:40:27 UTC
From: Thomas McBarron
Topic: 1174 Message: 1177

Brooks Fire Department shut down in 1996 I believe. The City of Houston and the City of Pasadena withheld funding to the department. Incidentally, the residents of Middlebrook and Brookwood are up in arms about the 15+ minute response times Pasadena has from station 6 and 8. Pasadena is working on building a new station in the immediate area the Brooks Fire Dept. once stood, which was torn down and is now part of the Brookwood subdivision.

Clear Lake City Fire Deaprtment met the same fate shortly thereafter, CLEMC (155.400) bought the contract for the use of the station.

The manual (except for a few typos) is correct - BUT it is a very
tedious read.

>It doesn't ever give me the option to choose the system I want to

There are two quirks here - you may have bumped into either or both. The
first
one is that many folks successfully program the frequencies into a bank
but failed
to place the bank into a trunked programming mode.

Try selecting the bank with the Galveston Co. stuff programmed into it.
Press "MAN" and then "DATA" until the [bank] display accross the top
appears. Then press one of the number digits to turn on the bank you want
(or turn off the banks you don't want). Make sure the bank with the
Galveston
Co. data is the only one selected, at this point if pressing TRUNK does not
turn the [trunk] indicator on or off then there are no trunked
frequencies in
that bank. You will need to re-program the whole bank.

The second quirk is after programming in a trunked system, people press the
"SCAN" button and expect to hear stuff right away. Unless you have also
programmed in some active talkgroups - you might not hear anything.

Just to make sure the system was programmed right follow along: press
"TRUNK" if the [trunk] display indicator is not already on and press SRCH
(instead of SCAN). The radio will pause on any active talkgroup instead
of just
the ones you programmed. If you can get this far you should be okay to go
back and review the manual for how to enter talkgroup info.

>Does anyone know of a good site to tell how to start scanning with
>this radio? The version of the ROM is 1.00, the serial number seems

>to indicate this is a fairly new model.
>
I think the Rich Wells web site (strongsignals?) has a FAQ on this radio. Also
there is a BC245XLT list on yahoogroups that you can join.

Regards,
Rick

Topic: 1172 Message: 1183

I stumbled on to some more fireboat info. The source was the Houston Fire Department 2000 Millenium Album published by the Houston Fire Museum. As Ed Lentz wrote, tere are three fireboats all operated by the Port of Houston Authority. The PHA employees 42 firefighters and a training officer. As described, boat #3 is at Morgan's point and is named the H.T. Tellepsen. It is 68' long and pumps 4000 gallons per minute(GPM). Station 1 is at the foot of Lakeside Dr. in Channelview placing it according to my map searching in the Old River channel accross the Houston sip channel just to the north and west of the Battleship Texas. The boat is the W.L. Farnsworth, largest of the 3 boats, 80' long, 6000 GPM. The third boat, Station 2, is the J.S. Bracewell, identical to the Tellepsen. It is located at the Woodhouse terminal, 1605 Clinton Dr., Galena Park. Acccording to my yahoo map that places it accross the channel from Vince's Bayou. I, too thought this boat was at the mouth of Green's bayou but according to my map is several miles ot the east of Greens B. I thought this website was going to help me relax and enjoy my hobby but instead more things to worry about. Where is this fire boat really docked? The station just off of Concrete street was placed in service in 1926. The fireboat was moved I believe 5 to 10 years ago. Until 1971 when Houston opened a land based Station 21 in Southwest Houston, the fire boat was designated on the running schedule as Engine 21. The boat stayed at that station for many years after the E21 designation changed.
From another authoritative source I learned the following. The fireboat still is dispatched on first alarms to locations right along the ship channel within the city of Houston. They are dispatched by telephone. the boats carry HFD and i presume a number of other radios. I was in Houston when the ship hit the 610 bridge last year, was monitoring at the time, and believe the boat was using the identifier "Fireboat 2."

Topic: 1172 Message: 1184

I don't think there is a fireboat at Woodhouse Terminal. I work directly across the channel from there and have yet to see the boat there. There is a cut just west of Woodhouse that they may be using near the Gypsum loading dock. This would place it just east of the Coast Guard office. I'll see if I can dig some info up from one of the guys I know in the Fire Department. He was Chief of the Houston Volunteers and he should be able to find what info we need.

1185. Fire Boats

Yahoo group: HoustonScan (1999 — 2002)

From: d952@mohaveaz.com
Topic: 1185 Message: 1185

Ed & Joe, thank you so very much for data that seems almost impossible to obtain. I will eagerly await the fine tuning as you try to verify exact berthing locations and any further detailed info on each vessel. Also as time permits would you try to inquire as to wheather the vessels are berthed under cover (there own enclosed bldg'ng)?

Thanks
Danny

OBTW, ask around if photos of HPA's fire boats are on the net.

1186. Conroe (?) Fire

Yahoo group: HoustonScan (1999 — 2002)

From: John Mayson
Topic: 1186 Message: 1186

I regularly hear traffic on 154.190 (PL 146.2). Based on the context of the traffic (highway numbers, mention of HLP) believe this to be the Conroe FD. Can anyone confirm they're still on VHF?

Last night there was a fire at 307 Sawdust Rd. Dispatches for this fire went out on the frequency above and 155.040 (PL 100.0). Who's on 155.040?

Thanks,
John

P.S. Houston PD and EMS have been coming in strong here in Austin.

yes....Montgomery County Fire Alarm uses these
frequencies:

154.190 (146.2) - Alarm F1
154.250 (146.2) - Alarm F2
154.325 (146.2) - Conroe VHF3
155.325 (146.2) - MCHD EMS
155.040 (100.0) - Woodlands Fire Dispatch

(these frequencies are in the process of being changed
to a new set of VHF repeaters)

Conroe Fire and Woodlands Fire also both use the
Montgomery County Ericcson EDACS trunking system.

Ed,
Thanks for the info. This is getting interesting. There is a picture of the boat in question at its dock in the HFD Album. It is docked in a large slip, big enough for barges. It looks like the photo is taken facing into the slip from the ship channel. To the right of the slip is a grain elevator. To the right of the grain elevator is a building about as tall as the elevator which looks like it might be a milling building. On that building, apparently facing the channel is a large white square logo with two words, one above the other, the lower of which might be "States." Any of this sound familiar? Judging fom the photo, it would not be obvious fom a distance that this boat was a fireboat. Also, say "hi" to your friend who was a HVFD chief for me. I was a member of that department from the mid sixties until I left Houston in 1979, so I know most of the old heads, those that are still around at least. thanks again for the investigatory work. JG

Danny,
The boat discussed above is pictured at its dock which is open, no cover or building. I think thats the way its done in Houston. I visited the old fireboat, the Capt. Crotty at the perviously discussed dock off of Concrete St. and it was in the open. There are pictures of the boats in the HFD Album which I have mentioned several times. i don't know of any web sources. I looked briefly at the Port of Houston site and did't see anything but you could look more thoroughly at that site. www.port of houston.com

It's getting much clearer. Checked with Jay today and the boat is at Woodhouse by Silo #2. It's on the west side of the grain elevators and I can't see into that slip from my location. In fact, I didn't remember seeing a slip there. You photo's confirm that it's on the west side of the grain elevators.

The other boat is at Greensport Industrial terminal. No road location was known just that it's hidden among some industrial companies. I will be getting a map of the ship channel that will have the fireboat locations marked on it.

I don't think I will get the chance tomorrow but maybe next friday if someone reminds me I'll take the digital camera and go on a boat hunt.

I dont know if this helps but someone sent me this.

Port of Houston Authority

3100 Penn City Rd, Greens Bayou - FB1 Farnsworth

9305 Concrete, Manchester Wharves - FB2 Bracewell

1819 Barbours Cut, LaPorte - FB3 Tellespen

I think they use 155.775 as their primary channel IIRC.

Keep up the good work guys.
Danny,
I think the Concrete St. location is out of date. It seems like both Ed and I have placed that boat across the channel and to the east.
Thanks for the frequency.
Ed,
I checked a NOAA navigational map which shows a long narrow slip between Woodhouse(where I think Woodhouse is, it isn't marked) and US Gypsum. The map shows a grain elevator just to the east of the slip labeled "Goodpastuer Grain Co." Would that be the silo you mentioned? If so it is of slight historic interest as there was a massive explosion which destroyed a grain elevator at Goodpastuer in 1976 or 77.
The Farnswworth remains a mystery. Both of you place her in Greens Bayou while I've got her in Old River-which is actually almost directly north acroos the ship channel from the Texas.
I forgot to mention earlier: the PHA operates a land based Haz Mat unit out of Woodhouse and a land based pumper at Morgans Point/Barbours Cut. Happy hunting guys. Thanks
JG

It was torn down in 1995. I remember, as I live in
Brookwood, and it was torn down after I graduated from
high school that year. And yes, there has been a lot
of rumors about a new fire station out here, but I
haven't heard exacly where it is going to be yet.

I just received an e-mail from a friend who is associated with both HFD and the HFD 2000 Book. He says to his knowledge the boats are in the locations indicated in the book. His information came from an officer on the PHA Fire Dept. He added that it was his understanding that the Farnsworth had been moved from Greens Bayou to Old River a couple of years ago and that about that smw time they moved the Bracewell to Woodhouse. Thanks for the converstation on this. Other info would be appreciated, as would a photo, Ed. Happy Memorial Day to all on the HoustonScan site.

1201. Houston Fire Department Ax Channel Designations

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-06-01 01:42:24 UTC
From: hwade1@houston.rr.com
Topic: 1201 Message: 1201

OK, I'm a newbie but a very old newbie. I like to participate in these groups by always trying to give something back. However, I just came across this question without anything to initially contibute.

The Houston FD is assigning Ax alternate frequencies to working fires. I went back through all of my old data, bought a new Police Call, and did a couple of searches but can't find what these are tied to. I heard A3 for a working fire earlier this week and A4 or A5, don't recall since I was driving, for an assist at Bush on a runway today.

I assume these are non-trunked freqs but don't have a clue.

Wade

Welcome. I'm another old newbie but one who'e been monitoring HFD since they had only one frequency. Here's the current picture as I understand it. The frequencies you mentioned are non-trunked. The A series are duplex.

453.425 A-1 Dispatch-Stations. Often you will hear both Fire and Ems
453.500 A-2 Dispatch to mobiles for fires, sometimes EMS. Also used for mobile to mobile on simple incidents when a tac channel is not used.
453.675 A-3 Often used as a fire tac channel
453.950 A-4 Another tac or backup channel, listed in one source as used by arson division.
453.450 A-5 Fire tac or backup. A-4,5 may have some other uses I am not aware of.
462.950 A-6 Ambulance dispatch
462.975 A-7 Ambulance tac or operations

B series: ambulance communication with Medical Center.

D-1 thru D-8 are the "direct" channels. They operate on the frequencies corresponding to the A frequencies. They are thus on the repeater output frequencies so don't "hit" the repeater and thus are used for local fireground communication often on walkie talkies.
In case you haven't found it, Myles Barkman has put together a great site for local frequencies (see below) He gives the repeater input frequencies, PL's etc. We are consistent on the uses of the main channels,A-1,2, 6- there may be some variation on the use of other channels and he may be more up to date than I am. I have a list which includes some "C" frequencies, a designation which I don't find on Myles' list. I haven't gotten around ot going through those freq by freq and figuring it out. Good listening
Joe Gay

As I understand it, those frequencies are simplex.

1207. 800 MHz Mobile Antenna

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-06-02 19:28:43 UTC
From: hwade1@houston.rr.com
Topic: 1207 Message: 1207

I hope this isn't off-topic for this group but I got such nice response to my questions about the HFD Ax frequencies, I wanted to pass on an afternoon project I did in spite of my hot garage.

I have one of the original BC235XLT TT scanners. I was on the original waiting list. It is probably not one of BC's best but it seems to work OK and I mounted it in my car using a cell phone holder. Those really work great but I had to use a couple of zip ties just to make sure.

Anyway, my project:

I was active in the HAM world some time ago but at a minimum code level. I really liked the 2M stuff since we had phone repeaters, which were way beyond anything anyone else had to phone home at the time. Anyway, remembering the transmission challenges we had then, I decided to experiment with a magnetic based mobile antenna to improve my old BC235.

I took an old magnetic base I had which has a 1 1/2" vertical metallic coupling including the top section that is set screw oriented for the antenna. The frequency I chose was 850MHz so the optimum raw antenna length would be 3.3" (approximately).

This is getting too long but... my options were to consider the entire length of the vertical base, setscrew section and antenna or just the antenna length. I started with the 3.3" antenna section which made the overall antenna 4.5"+. This is around 620MHz. The reception was better by testing a capture with the downtown Harris County set compared to Tomball. I still had a pretty good carrier background.

I cut the antenna to 2.1" for an overall length of 3.3". Remember, I had to insert the antenna to the setscrew so this is part of the overall length. The background carrier went way down.

Now I know I am really playing with the SWR characteristics of a transmitting antenna, which should mean nothing to this effort, but it made a difference. Get a magnetic base, some spring steel that fits in the connector and give it a try.

Thanks again.

1208. HPD units?

1210. Waller & Washington Counties

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-06-04 01:35:08 UTC
From: John Mayson
Topic: 1210 Message: 1210

I visited Houston yesterday. On the way down I noticed two things.

I saw two Brenham PD patrol cars, but didn't see any obvious (read VHF) antennas. Did I just miss them, or are they on some other system?

The Waller County SO channel had a constant "chuffing" noise interupted only by regular communications. Is this some sort of anti-scanner tactic?

Wade,
I looked into how the Ax channels were used a little more. I don't live in Houston and wanted to check with a local source to make sure the usage was the same as when I was last there in December. A1 is used for dispatching stations, A2 for dispatching apparatus. All fires dispatched on A1 are simelcast on A2, plus subsequent communication is on A2, which makes A2 the better frequency to monitor for fires. If the incident is easily contained and involves mainly radio traffic between mobiles and the dispatcher, it will remain on A2. If it looks like mobiles will need to talk ot each other to any extent, either the District chief giving orders to units or units exchanging info., they will switch to a tactical channel. At times the District (chief)requests a tac frequency, at times the dipsatcher initiates it. For fires usually A3 or A4 is used. There seems to be no particular system to which is used: its not East side A3 and West side A4 are anything like that. I understand that there have been tech problems on the tac channels, intereference or repeaters down, so to an extent it is what channel is working better that day. A5 may get some use also. I'm not clear what decides whether they use an A channel or D channel. It seemed like if the District simply requested a tac channel he got an A channel, if he wanted a D channel he specfically requested that, sometimes requesting a specfic one. The difference is that A channels go through the repeater , D channels do not. EMS uses mostly A7 and A8 as their tac channels. Although they probaly use D channels some also, I think they are more likely ot use A channels because many of the communications are between an ambulace on the scene and a suppervisor in his car some distance away.

From: Christopher Hysinger
Topic: 1201 Message: 1213

While I have no official confirmation of this, D channels seem to be exclusively used for incidents in high rise buildings. I suspect this is because the range of the radios is limited in such large steel structures, and reaching the repeater on one of the A channels would be difficult. My guess is the simplex channels, while having a limited range, are more likely to reach other units working on the same incident.

As far as A-1 goes, I had read sometime ago (I think on this list) that it is a rebroadcast of the microwave system they use to alert the stations. Sometimes I hear dispatches on A-2 that I do not hear on A-1, and I wonder if these are dispatches that are indicated by the CAD system as being to units already in the field.

On a side note, I have attempted to monitor the B channels from my house, with little success. There is one that is used to assign the EMS unit to a particular med frequency, but apparently all of the traffic initiated by the EMS unit to the hospital, once received by the repeater, is transferred to a fiber optic link to the med center to protect the privacy of the patient. The radio traffic initiated by the hospital is repeated so that the EMS units can receive it.

1214. East Texas Trip

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-06-04 04:58:35 UTC
From: bpckty1@webtv.net
Topic: 1214 Message: 1214

Made a couple of trips to the Texarkana area this past week. Yes, the graduation and wedding season is upon us.

A couple of notes observed along US 59. The San Jacinto County Sheriff and Center PD are on the same frequency, 154.8450. No big deal, since they are a couple of hundred miles apart. But, they have the same PL tone, 192.8. I hope they don't have too many problems when the skip is in. A funny side note, though. While passing through San Jac county this Sunday afternoon, an interesting dispatch was heard. There was a large gathering of people (men, women, and children) in a parking lot near an apartment complex. They were shouting, raising their arms, and shaking their fists into the air. Several units were dispatched, lights and sirens activated. The first unit arrived and disregarded all of the other units. It appears that one of the neighbors did not like the fact that the neighboring church had moved its service outside. Ah, yes, small town PDs and their problems.

Plus, Diboll PD now seems to be on a repeater. I was unable to locate the mobile input, but they are still using 154.7400, PL 203.5. Their alternate channel is 155.5650, no PL detected. They also had a major investigation in progress. They were tracking a stolen bicycle on the back channel. I got too far away to hear how successful they were.

I don't want it to appear that I am making light of small town policing. These incidents, although they seem humorous, could have been the beginnings of serious incidents. Fortunately, they were benign. But, it shows how even small towns can have some interesting scanning activity.

With a few exceptions, nearly every driver on the highways was observing (or was not travelling too much over the speed limit). I am sure this was in part because of the publicity recently about the seat belt crackdown, and that there were more DPS on the road than I have seen recently. Just monitoring DPS base frequencies was proof enough. There were more DL and License Plate checks than one normally hears on the Houston frequencies.

And, heard for the first time, although it may have been in use for a long time, Livingston PD, 155.0400, PL 192.8.

Please, a little help with Cleveland PD. I was unable to nail down their PL/DL. I have copied PLs from 177-203 on 155.6650.

Happy scanning, and drive safely.

Chris,
Thanks for the additional info. Come to think of it the high rise incidents which I have heard were on D channels and I believe I remember the dispatchers putting high rise incidents on a D tac channel even before units arrived. This is rememberable because switching it to D means you can't monitor the mobiles if the incident is any ditance away. I'm not so sure that D channels are used only for high rises. Seems like I've heard some other incidents on them. I'll have to pay closer attention the next time I'm in Houston, which I hope will be July.
Microwaves and A1: I heard-and it was some time prior to last July-that HFD had let the licenses for their microwave channels expire. Those channels had to then shut down and station dispatch was shifted to A1 (453.425). Prior to that time A1 was used as you described, with the microwave station alerts repeatered and for communication between mobiles and the dispatcher, the same way A2 is now used. I also think you are correct that dispatches you hear on A2 but not A1 are for units that are "on the air."
On the B channels; have you ever been able to hear ambulances that are close, say within a mile or so, of yuor receiver site?

Good listening

Joe Gay

<< Howdy, today around 3 i was listening to 460.025, and heard units saying "14D10 show me SO 1time SOFT IMPACT" what does "SOFT IMPACT" mean? >>

It means he is carrying a bean bag shotgun for that shift. Supposed to be one in every beat on every shift. When someone SO's they are supposed to tell the dispatcher if they have a Taser and/or a bean bag shotgun ("Soft Impact Weapon").

It is a regualar FN shotgun (Fabrique Nationale bought out Winchester) with 5 bean bag rounds in a plastic side saddle.

They may wait until they sign on their MDT and send that message to the dispatcher, so you may not hear it on the radio very much.

<< At times the District (chief)requests a tac frequency, at times the dipsatcher initiates it. For fires usually A3 or A4 is used. >>

These days at least A4 is being used by EMS but not fire. They use it to get callbacks done, call supervisors, etc. I haven't heard any fire activity on A4 in the last couple years.

Well to my amazement of Police Cars(Pasadena) mainly, The neighborswere having a problem with my brother, So i was asked to call thepolice NON-Emerg Spoke to a dispatcher and said "we'll have a uniten-route" said alrighty and a few minutes later on PPD trunking 6576heard "Juvenile problem...### S___Lane" I sat outside awating thepolice officer, with my BC 235, He arrived talked to my parents, Iwent inside to grab my camera and i asked if i could take a pic hesaid Sure, I showed him my radio and he showed me his and he turnedit off and on (made a tone similar to a Low battery indictor on aFR50) and it lit up and said PATROL-1, He asked for my radio andsaid, Listen in you're gonna hear him, He took me to his car and gaveme the MIC and I waited for silence and said "322x they've beenadvised" Radio comes back ands says "Thats clear" He took me aroundthe block and cleared the call on the MDT(i noticed it said my nameas complainant) he asked me if i knew whatthe MDT was i said yeah, Heran his plates(home) and god those MDT's beep LOUD! It saysreceiving...sending...Turned into a neighborhood and showed me thelights/sirens and told me they needed good people like me in theforce, I have looked thru motorola's website and have not found theradios they use. The unit in the shop had a LCD screen that saidPATROL-1 as did the handheld.
Also on most MOTOROLA Systems you would expect a prrrreppeep before transmitting(indicating that it is clear to talk), I didn't hear that. Any reason why? Or can they be disabled? Also the emergency button(in the car) has to be RESET manually and the dispatcher hears a LOUD Buzzing/busy telephone line sound when it is activated.
Just thought i would share myexperience with you'll. Sorry it is alittle off topic.

That is a programmable feature of the radio. It is not unique to trunked radios, either. HPD's UHF radios (Moto Sabers) used to do that, but it was taken out as a safety feature. You'd be surprised how loud that beep was in a real quiet, real dark, business. The downside is a lot of people don't pause long enough to let the repeater pick up and we miss a lot of district numbers.

I hear Brenham police regularly on 155.835. pl 141.3
Washington Co uses 155.625 pl 141.3

Haven't listened to Waller co (155.760) lately but last time I did it was pretty quiet. One member of the houston list reported Waller co using Nextel a while back. I'll give them a listen
for that noise you described and get back to you.

1221. tornado drill

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-06-05 05:05:34 UTC
From: sly.debbie@verizon.net
Topic: 1221 Message: 1221

Well Brazos co had their mock tornado drill this afternoon. I participated with races to perform b/u comms at a couple sites but was never called upon
Anyways to update you on a couple freqs that I found that came active

155.805/154.040 pl 141.3 Brazos co emergency mgnt
463.275/468.275 pl 123.0 Guardian Ambulance service
47.420 American Red Cross-yes they were using this low band stuff plus cell phones

Other typical freqs in use that were part of the drill (someone said 19 agencys were involved)

Brazos co So 155.415 and 155.670 and 154.950 some too
Vol. Fire 155.940 (Never heard them on the ouput talking simplex)
Bryan fire 154.415
Bryan ACO Bryan 800 trunk system
Brazos Co road and bridge crew 453.375
Vol fire and interagency fire 154.280
Ham 146.680 and 443.450 and 146.490 and poss some atv freq in the 430 mhz area
Fire dept who? Bryan? 154.250

Never heard anything on some of the other vol fire freqs 154.160, 153.830

And of course several cell phones in use

Didn't try to listen to any media stuff or biz band or frs as these were keeping me busy.

1223. Questions/HFD

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-06-05 05:25:17 UTC
From: zulu
Topic: 1223 Message: 1223

Hi group,

I frequent the "HFD Active Incidents" webpage often and I was curious to ask why for some calls a lot of apparatus is dispatched to a call and then in some instances barely anything.

Do dispatchers make this determinant?

Example.. Man/Woman Down Call, dispatched;
Ambulance 101, Engine 101, Ladder 101, Booster 101

Is there a reason that ten people (did I count right?) went to this call?
Or is it
just how things get dispatched?

And for example:
493Y 23:48 STROKE/CVA 5 S 006 L 007 A 025 E 007 S 007

Is this for manpower purposes? Why would a second squad be dispatched after there is already one on scene?

Are supervisors dispatched to scenes like the Stroke? And if so, how? I do not hear them on my scanner. I know some departments around Houston send a supervisor to anything critical.

... I hate to keep posting questions to the list and clogging everyone up, but any
information would be appreciated.

Also, anyone know of information online or websites with more HFD info? Any information for listening would help.. I know San Antonio has
http://www.sanantoniofire.org,
and etc.

I like www.local341.org/stations.html - That helps in listening. :)

Thanks!

1224. A note from Harris county

Yahoo group: HoustonScan (1999 — 2002)

From: joegay@frognet.net
Topic: 1223 Message: 1225

Very intersting questions. I have some educated guesses but am at a disadvantage because I live in Ohio and can't monitor directly. I am a daily visitor to HFD Active Incidents and maintain HFD contacts in Houaston, who I consulted about yuor question. I also spend about six weeks per year in HOuston and monitor HFD every waking moment and often through the night.
A lot of the variation in the number of units responding is due to the dispatchers. The usual dispatch now seems to be a first responder Engine or Ladder, a squad (in areas where squads operate), and an ambulance. Where there are no squads, its usually Engine or Ladder plus ambulance or sometimes E/L plus an ambualnce, plus a Medic unit-that would usually happens when they weren't too busy. It appears that the ambulance only responses are mainly on incidents judged to be minor and occur when EMS, and possibly fire suppression, are quite busy. Some of this may be due to information not evident to us on Active Incidents (AI). For example, on AI I saw A37 was sent solo to a motor Venicle Incident (MVI) at Katy Frwy and Loop 610-a long run for them. My guess is that the ambulance was requested by PD on the scene who could give a reliable report that the injuries were minor. Since all the controversy last summer, not sending an ambulace is not really an option nor is not hauling a patient who wants to go.
It is very common now for HFD units that are on the air or just going in service to initiate their own response to nearby runs that they hear on the radio. Those listening on scanners will hear them ask the dispatcher, "Do you want us to respond to....?" or more commonly phrase it "Can you add us to the record with...?" I think that's probably what happened on the example you gave with S6, L7 etc. Judging from the locations of the stations and the dispatch sequence on AI, my guess is that S6, L7, and A25 were dispatched to an incident somewhere in the vicinity of station 7. E7 and S7 may have been on the air and added themselves to the run. It is also possible that the first squad requested a second squad to get a second paramedic to the scene. The other incident, A101, E101, etc is a mystery to me. Couldn't even guess. However I counted nine personnel asssuming the Booster had only one firefighter.
On some incidents, ambulance supervisors are dispatched, but they are often dispatched by the designation "pager 710." Supervisors do not operate in set districts. All of the supervisors carry 710 pagers so all are alerted and the nearest available supervisor goes. I assume they clear on the radio but it might be hard ot catch that brief bit of traffic. Supervisors also monitor the dispatcher almost constantly and initialte a lot of their own responses. I don't think they always put themselves on the record.
Also, one of my contacts in Houston tells me that runs are added to

the AI page a minute or so after being dispatched but not updated
with units added to the record after that; therefore if a supervisor
acknowledged the run late or didn't add themself to the record until
getting to the scene, they wouldn't appear on the AI Page.
Websites: Can't help you much since you may already know about
these. There is an offical HFD webpage
http://www.hfd.ci.houston.tx.us which has station addresses and run
statistics, and other stuff. The Local 341 page ahs a link ot it. I
like the station location format better on the Local 341 website.
Other local websites include Harris Co Firefighters Assoc-
http://www.hcffa.org
the Harris Co Fire Marshall-
http://www.co.harris.tx.us/fmarshall
and a state wide site-
http://www.texasfirefighter.com
Also, if your interested in fire departments in general or just
want to see a great website, check out the Fire House magazine
website-
www.firehouse.com
Go to links>Fire Dept USA>Texas to find more local links. All of
the sites I listed have links so you might find some other good
sites. Please post them if you do.

Good listening

1226. 780's found at Dallas (Arlington) Hamcom this weekend

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-06-09 04:35:53 UTC
From: sly.debbie@verizon.net
Topic: 1226 Message: 1226

Hello All:
I was at Hamcom 2001 today (Fri) and noticed a couple dealers there that have 780's. Norm Schrein with the Bearcat club is there and will have 2 units avail sometime Sat. His selling price is $375.
I also noticed the booth next to him (Am-Com?) had about 3-4 units also and their price was $369.
There poss could be some new venders show up tomorrow as Fri is not the busiest day.

Hamcom goes on until about midday Sun but don't know if these venders will be there thru this time--so in other words be there Sat if you want one.

Admission to the Ham fest is $9 and parking is $4

hehe, also.. you're missing some AWESOME stuff unless your in Houston listening.
You'll notice tonight and a couple nights ago the HFD AI page is going dead for like
5 hours at a time.. they are so busy w/ Water Rescues they cant keep up..

They setup a couple Water Rescue command centers w/ a Tac channel, been using the evac boats and lots more..

Maybe another good idea for the website would be a scanner feed? thats possible,
i have two extra scanners and coming soon is a cable modem which could upload in real audio :)

dont know if that would help you out up there in ohio..

1228. System goes into FAILSOFT mode

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-06-09 08:02:33 UTC
From: Alberto Rea
Topic: 1228 Message: 1228

Unknown which system since it didn't sound like PAsadena, They said 604? Dispactch is down 866.8625 and it was like having your squelch all the way down and it was constant untill a beep came in every ten seconds, then it went prrrrrrrup and a control channel covered it and it went away.Keyed up as 8088.

1229. HFD off the Air

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-06-09 12:03:14 UTC
From: joegay@frognet.net
Topic: 1229 Message: 1229

I received a call from Houston about 0530 hrs Houston time.
Houston Fire Department went off the air about 0500 hrs CDT (Houston time). All repeaters seem to be down as judged from listening post just south of Hobby airport. 911 telephone system had crashed prior to that time. My contact does not monitor PD so situation there unknown.
Any assitance with communications that readers on this site could provide would probably be very helpful. USE EXTREME CAUTION IN TRAVELING. NUMEROUS PEOPLE IN CARS HAVE BEEN TRAPPED IN HIGH WATER. I expect some, possibly many, fatalities.
A number of fires went unfought over night because apparatus could not reach locations due to high water. Public statements by Office of Emergency Management clearly understated degree to which HFD was overwhelmed by situation. Typical traffic while HFD was still on the air: "Station 37 (Aberdeen and Stella Link) to dispatcher. A man in a canoe just paddled into station and said that a house at Aberdeen and Buffaloe Speedway is on fire."
Dispatcher: "Are you going to respond to that location?" Station 37: "We are unable to leave the station. We are sending a firefighter with a walkie talkie to the scene in the canoe." A little while later: "Canoe 37 to dispatcher. House at Aberdeen amd Buffaloe totally involved. No need to send equipment. The house has burned down to the water line which is about 6 feet above the floor."

I hear Ham radio operators on 146.92 the Southwest Link freq.
Setting up at fire stations to relay messages around Houston.

With the 9-1-1 network overburdened here are some Non-Emergency numbers(seems like the only way to get help) As far as i'm concerened
Pasadena 911 is operational
Houston Police Non-Emergency 713-222-3131
Harris County Sheriff(If you live outside of Houston city limits)
713-221-6000
and Pasadena Police
713-477-1221

I listen to Waller County SO constantly. I have also noticed a lot of interference coming over there system. I am glad to know it is not just my radio. I listen on a 2 meter radio so, I have set my (freq 155.760) PL to 146.2 to knock a lot of it out. But I still here other stations untill the repeater drops out. I think most of it is coming from the input frq. (154.785).
I think their system must be getting old.

Some HFD stations have no phone or radio usage at this
time...I checked by with my local station 58, and
their main station radio was down, but they were still
in contact with dispatch via HT's...I listened to HPD
N. Shepherd and they are working fine.

1235. HFD and flood

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-06-10 04:28:19 UTC
From: joegay@frognet.net
Topic: 1235 Message: 1235

The HFD "Active Incidents" page is back on line. It could not be accessed all day. However, the date/time on the page is 6-9-01/0453hrs That is about the time the radio system crashed. It is well worth a look at the site to see how busy they were and how thin resources were spread. I counted 28 fire or water rescue incidents and 50 EMS incidents listed as active. It is possible that the times are messed up but the number of incidents remains the same.
FYI: I was able to call Houston long distance from Ohio prior to 0630hrs Houston time. I didn't try again until about 1400hrs and couldn't get through then or at any time since. I have attempted to call numbers in the 713, 281, and 832 area codes and get a recording on all three that says, "Due to flooding in the area you are calling, your call can not be completed at this time."
The Active Incident page mentioned above is
http://ci.houston.tx.us/~hfd_ai/
I hope this communication finds those on the site in the Houston area safe.

The City of Houston has set up an temporary airport (Heliport) at Stratford High School Football Stadium, located at 900 Dairy Ashford. It was a site to see all the FEMA and VIP's fly in on the Army Helicopters. They would transfer to HPD's Fox and take off quick. on one landing I'm thinking it may have beed the Gov. because they were gone only about 45 min, soon as they returned the passenger transferred back the the Army craft and took off, both times the birds were running and ready for take-off when the other landed. also, the National Guard was transporting water rescue teams .. they were hand loading the boats into the helicopters along with the crews ... I tried to listen to my scanner and did hear a little VHF HiBand Simplex traffic, however, I didn't get to stay around long before I was off to tow another water critter.

1237. 800 Trunk Radio

Hi Everybody,
I recently bought a couple of 800MHz trunked Motorola Mostar radios off Ebay and was wondering if it's possible to have them programmed to monitor Fort Bend Co's trunk system? And what information would I need to have them programmed? The radios are 8 channel, so I guess each channel would be a separate talkgroup?

Thanks,
Marvin Suggs

Listen to Harris County Fire Mutual Aid tg 10992, command post in Baytown, nearly all Harris County FDs are represnted there and those with the 800 MHz radios can be monitored, and the National Guard can be indirectly followed by the dispatcher's comments.

1243. My view of the flood...

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-06-12 01:38:35 UTC
From: scasko@aol.com
Topic: 1243 Message: 1243

<< I heard alot of interesting traffic on HPD mainly 460.125 heard a Police Chase last night >>

That would be Northeast Patrol, my people. It was a wild and woolly weekend for us. Was what you heard when we got the Lojack hit on the Navigator? Not that we had any computers to run the Lojack code to find out what kind of vehicle to look for, but we could tell when it was moving it narrowed it down.

The rest is only partially scanner related, delete at will....

For me, it started at 10:30 Friday night on my way to work. Tried to get around Wayside (flooded) and cut east across Tidwell to get to the Northeast Station. Got trapped at the Texaco at 59 and Tidwell by high water and had to call it quits there. I happened to have my own radio (list related tidbit) and told dispatch I was there and that's where I'd be for a while. Had 22 cars in that little parking lot. For some reason, the clerk closed the store at 11:30. He couldn't go anywhere, he was trapped with us, but he said he was supposed to close at 11:30 so he did. Turned out the parking lot lights too. Nice.

A bunch of people waded/swam over to the parking lot where I was because they saw me in uniform. Said they felt better over on my side of the Tidwell river. Not much I really could've done, but I guess it was better for them.

Managed to get back up on the freeway and sit on the overpass for a few hours in the rain while the street continued to fill up. I was listening to my radio off and on to conserve the 1 battery I had (and no 12v adapter). Pretty good rescue going on on Central, lost 1 dive team boat and 2 officers were in the water out of contact for about 1/2 hour. My friends involved said Fox did an outstanding job of locating them, flying only a couple feet over the water and smashing the trees down so the other rescue boat could get to them. It was during this that the Central Patrol channel (and a few others) went down. Talk about timing...

About 4 or 5 am I found out about the boat rescues going on further up 59 and went up there with the 1 HFD truck and 1 boat that had made it there. List related tidbit #2, found out their radios had crashed completely earlier in the morning. We were down to 3 channels (NW, SW, NS) after the generators failed. They told us they were switched over to battery power and would be completely down in 30 minutes. They were right. I don't know which was worse, losing the radios without warning or knowing it was inevitable and about to happen.

Stayed out with the HFD guys pulling people out of the boats at 59 and Little York until about 5 pm Saturday. I don't know if was due to the flood or having worked only nightshift for the last 9 yrs but I was really, really

impressed/overwhelmed with the people who came to help us out.

We started with 1 boat and a Metro bus trying to evacuate people to a shelter up in Humble (another list note: I have an 800 radio and Humble being conventional 800, and still up and running, I was able to talk to them but not my own people). Metro driver said he would come back for another load but promptly left and was never seen again. I flagged down a guy named Lionel driving a US Mail truck and arranged with him to load up with people and go to the shelter. I am sure DOT/osha/etc would've had a fit if they had seen us loading 50-75 people into a big delivery truck on the liftgate.

He left to the shelter in Humble and said he'd be back. After my disappointing experience with the Metro driver I was not optimistic. Well, he did come back. And back, and back. And called his nephew to get his other truck from home and bring that out too. All told he made about 7 trips to 2 or 3 different shelters for us, transporting 300-400 people. Youngest was a pair of twins 4 days old, oldest (that mentioned it) was 86. Several of them injured, but we had no access to an ambulance for anybody (and they would not have been able to take them anywhere anyway). They had some first aid people at the shelter so we figured getting them there was the best option we had. Even flagged down a guy driving a school bus and he was able to help us evacuate some of the people too.

During this is when the food started showing up. When the first pizzas showed up we realized that none of us had eaten in well over 12 hrs and we started shoveling it down between boat loads of people. I couldn't believe how much food people started bringing (they said the channel 11 crew out there with us had mentioned it) and it started pouring in. We even had a guy show up with 40 blankets from another shelter. Loaded food and blankets into the truck with the next load of people and sent it north again.

Did I mention that Lionel and his truck kept coming back? I couldn't believe it, we were in a real jam and he kept on coming back for more. At one point we had over 100 people under the bridge (out of the rain and lightening) and when he found that out he called his nephew to get his other truck from home. I am working on getting him an award from the Mayor for his help, we would've been lost without him. What do you do with a few hundred soaking wet people under a bridge in a flood in the rain?

More and more boats started showing up, and we got the last of the people cleared out pretty fast. We reached critical mass on the boats, just too many people running around and nobody knowing where anyone else had already checked, so we diverted them to Mesa / Tidwell (where the dumptrucks and front end loaders were getting people out of their houses).

I called the station and was told they were completely flooded in and there was not even a remote chance of my getting there. They said to sleep wherever I could and try again in the morning. I finally made it to the station at 7 am and worked until about 5 pm, then came back for my "regular" shift from 11 pm to 7 am.

It was a serious mess out there folks. There was a landing zone set up on Kelley in front of LBJ to land Lifeflight and National Guard Helicopters evacuating pediatric patients from Hermann. Even though our radios were back up at this point we were not able to communicate with them at all. I know it could've been done somehow, but nobody knew what to do.

And that leads me into another point. There has been basically no planning or training for an event like this. The police and fire depts were obviously overwhelmed, and having the radios go out made it all seem surreal. When I was talking to the HFD captain I was with he said their phones were out too (so were ours) and he could only call a few different fire stations. I asked him where their plans were for something like this and he just laughed. We realized we just had to keep a lid on the area we had access to and hope that it all worked. If something like this happens again (this was only the first tropical storm of the season remember) be prepared to fend for yourselves. Plan in advance. Don't count on us being able to get there (or even being aboe to find out where it is we neet to go to get you). Plan now.

Since joining the police dept I have almost never felt out of touch. With the exception of a few dead batteries and some other temporary snafu's, I have always been able to call for help (and expect it to arrive). Well, it started out with being able to call but not get anyone, then it went completely out. Like the HFD Captain said, we just kept a lid on it and worked it out as best we could.

Hopefully this will be a learning experience for all involved. I think the higher-ups need to fix a bunch of things, and maybe even talk to us "lower-downs" about how thing really happened.

Steve Casko
HPD Northeast Patrol

"Pious words without resolute and continuous implementation are widely recognized to be the kind of official hypocrisy which generates public cynicism and anger. This alienates large sections of the population."

Steve - thanks for your report. The woman with the 2 four day old twins was on ABC News on Saturday night at 1830 EDT here in Boston MA. She said that she was in the car overnight and called the "Ambulance Department" by cell phone in the morning to come and get her. ABC News even had a helo shot of her as she was being transported with the babies by a crew in a airboat. Then she was interviewed as she sat in the back of a ?police car. I bet that your local ABC station could supply you with a copy of the story.

It has been raining most of the day here in Boston - but thankfully, no flooding.

Hopefully you folks have seen the worst for 2001.

Peter S

Steve,
Thanks for that very graphic description. I been telling people up here (in Ohio), "It really was a big deal. It was much worse than the news is presenting. (Saturday morning CNN had more video of flooding in Hong Kong than Houston) It is really bad." You make that really clear. I thought that besides the death and tragedy one of the biggest parts of the story was the breakdown of the radio systems (I didn't know HPD went down until I saw your message.) I forwarded my initial HoustonScan posting to Firehouse.com and got some coverage but haven't gotten them to cover the radio system failure. Thanks again for your account.
Tonight (so I was told), the HFD dispatcher was off the air again for an hour or so. The repeaters were still working, units were disaptched by phone, and apparatus could communicate with each other. The Active Incidents page went down at 1936hrs (which doesn't really matter, it's the radio that gets the fire trucks rolling). The dispatcher was back on the air before I started this posting.
My further information on the situation Friday night and Saturday is that HFD was essentially totally off the air, except for local direct communication on the D channels, from 5:00AM until about 10:00AM. At that point a command van came on the air. Transmissions were fairly clear so they were probably going through the repeater but apparently not all repeaters were up since some local communication wasn't getting through. It was apparently several hours later before the dispatcher came back on.

You folks in Housotn are in my thoughts and prayers

It is a shame that the emergency services have not embraced the biggest back up support group you can have. Amateur radio. While this was going on, some of us hams tried in vein to help out with fully functional VHF and UHF radios to assist in the cities radio failure. So, we were, ONCE AGAIN, snubbed off to help the Red Cross and the shelters. Alot of us work hand in hand with the National Weather Service (Skywarn), Houston and Harris Co. EOC, Red Cross, and yes, even DPS and TxDOT. But HPD, HFD, HCSO, and Metro deny we exist. Why? In the last week, we could have nipped the radio failure in the bud. Less than normal, naturally, but functional. We hams spend our hard earned money, yes, that is our fault, to be there when disaster strikes. We know darn well that public service radio systems are prone to failure in such a disaster. As are cellular phones, and land line telephones. We hams can at a moments notice get an operator where one is needed most. We have a room behind the upstairs comm room, just for us hams for communications to almost anywhere. If we should loose one repeater, we have upwards of 30 or so repeaters to back that one up.

But, HPD, HFD, HCSO and Metro don't need us. Their systems will NEVER go down, and IF they do, they don't need us.

We train weekly for such disasters.

They don't need us AMATEURS to show up professionals.

Yea...Right...

Case in point, last weekend.

WAKE UP, YOU RED TAPE WACKOS!!!!!!!!!!!!!!!!!!!!

I will get off my soap box now.

Sorry for the lecture.

Subject: [HoustonScan] My view of the flood...

<< I heard alot of interesting traffic on HPD mainly 460.125 heard a Police Chase last night >>

That would be Northeast Patrol, my people. It was a wild and woolly weekend for us. Was what you heard when we got the Lojack hit on the Navigator? Not that we had any computers to run the Lojack code to find out what kind of vehicle to look for, but we could tell when it was moving it narrowed it down.

The rest is only partially scanner related, delete at will....

For me, it started at 10:30 Friday night on my way to work. Tried to get around Wayside (flooded) and cut east across Tidwell to get to the Northeast Station. Got trapped at the Texaco at 59 and Tidwell by high water and had to call it quits there. I happened to have my own radio (list related tidbit) and told dispatch I was there and that's where I'd be for a while. Had 22 cars in that little parking lot. For some reason, the clerk closed the store at 11:30. He couldn't go anywhere, he was trapped with us, but he said he was supposed to close at 11:30 so he did. Turned out the parking lot lights too. Nice.

A bunch of people waded/swam over to the parking lot where I was because they saw me in uniform. Said they felt better over on my side of the Tidwell river. Not much I really could've done, but I guess it was better for them.

Managed to get back up on the freeway and sit on the overpass for a few hours in the rain while the street continued to fill up. I was listening to my radio off and on to conserve the 1 battery I had (and no 12v adapter). Pretty good rescue going on on Central, lost 1 dive team boat and 2 officers were in the water out of contact for about 1/2 hour. My friends involved said Fox did an outstanding job of locating them, flying only a couple feet over the water and smashing the trees down so the other rescue boat could get to them. It was during this that the Central Patrol channel (and a few others) went down. Talk about timing...

About 4 or 5 am I found out about the boat rescues going on further up 59 and went up there with the 1 HFD truck and 1 boat that had made it there. List related tidbit #2, found out their radios had crashed completely earlier in the morning. We were down to 3 channels (NW, SW, NS) after the generators failed. They told us they were switched over to battery power and would be completely down in 30 minutes. They were right. I don't know which was worse, losing the radios without warning or knowing it was inevitable and about to happen.

Stayed out with the HFD guys pulling people out of the boats at 59 and Little York until about 5 pm Saturday. I don't know if was due to the flood or having worked only nightshift for the last 9 yrs but I was really, really impressed/overwhelmed with the people who came to help us out.

We started with 1 boat and a Metro bus trying to evacuate people to a shelter up in Humble (another list note: I have an 800 radio and Humble being conventional 800, and still up and running, I was able to talk to them but not my own people). Metro driver said he would come back for another load but promptly left and was never seen again. I flagged down a guy named Lionel driving a US Mail truck and arranged with him to load up with people and go to the shelter. I am sure DOT/osha/etc would've had a fit if they had seen us loading 50-75 people into a big delivery truck on the liftgate.

He left to the shelter in Humble and said he'd be back. After my disappointing experience with the Metro driver I was not optimistic. Well, he did come back. And back, and back. And called his nephew to get his other truck from home and bring that out too. All told he made about 7 trips to 2 or 3 different shelters for us, transporting 300-400 people. Youngest was a pair of twins 4 days old, oldest (that mentioned it) was 86. Several

of them injured, but we had no access to an ambulance for anybody (and they would not have been able to take them anywhere anyway). They had some first aid people at the shelter so we figured getting them there was the best option we had. Even flagged down a guy driving a school bus and he was able to help us evacuate some of the people too.

During this is when the food started showing up. When the first pizzas showed up we realized that none of us had eaten in well over 12 hrs and we started shoveling it down between boat loads of people. I couldn't believe how much food people started bringing (they said the channel 11 crew out there with us had mentioned it) and it started pouring in. We even had a guy show up with 40 blankets from another shelter. Loaded food and blankets into the truck with the next load of people and sent it north again.

Did I mention that Lionel and his truck kept coming back? I couldn't believe it, we were in a real jam and he kept on coming back for more. At one point we had over 100 people under the bridge (out of the rain and lightening) and when he found that out he called his nephew to get his other truck from home. I am working on getting him an award from the Mayor for his help, we would've been lost without him. What do you do with a few hundred soaking wet people under a bridge in a flood in the rain?

More and more boats started showing up, and we got the last of the people cleared out pretty fast. We reached critical mass on the boats, just too many people running around and nobody knowing where anyone else had already checked, so we diverted them to Mesa / Tidwell (where the dumptrucks and front end loaders were getting people out of their houses).

I called the station and was told they were completely flooded in and there was not even a remote chance of my getting there. They said to sleep wherever I could and try again in the morning. I finally made it to the station at 7 am and worked until about 5 pm, then came back for my "regular" shift from 11 pm to 7 am.

It was a serious mess out there folks. There was a landing zone set up on Kelley in front of LBJ to land Lifeflight and National Guard Helicopters evacuating pediatric patients from Hermann. Even though our radios were back up at this point we were not able to communicate with them at all. I know it could've been done somehow, but nobody knew what to do.

And that leads me into another point. There has been basically no planning or training for an event like this. The police and fire depts were obviously overwhelmed, and having the radios go out made it all seem surreal. When I was talking to the HFD captain I was with he said their phones were out too (so were ours) and he could only call a few different fire stations. I asked him where their plans were for something like this and he just laughed. We realized we just had to keep a lid on the area we had access to and hope that it all worked. If something like this happens again (this was only the first tropical storm of the season remember) be prepared to fend for yourselves. Plan in advance. Don't count on us being able to get there (or even being aboe to find out where it is we neet to go to get you). Plan now.

Since joining the police dept I have almost never felt out of touch. With the exception of a few dead batteries and some other temporary snafu's, I have always been able to call for help (and expect it to arrive). Well, it started out with being able to call but not get anyone, then it went completely out. Like the HFD Captain said, we just kept a lid on it and worked it out as best we could.

Hopefully this will be a learning experience for all involved. I think the higher-ups need to fix a bunch of things, and maybe even talk to us "lower-downs" about how thing really happened.

Subject: Re: [HoustonScan] My view of the flood...

It is a shame that the emergency services have not embraced the biggest back up support group you can have. Amateur radio. While this was going on, some of us hams tried in vein to help out with fully functional VHF and UHF radios to assist in the cities radio failure. So, we were, ONCE AGAIN, snubbed off to help the Red Cross and the shelters. Alot of us work hand in hand with the National Weather Service (Skywarn), Houston and Harris Co. EOC, Red Cross, and yes, even DPS and TxDOT. But HPD, HFD, HCSO, and Metro deny we exist. Why? In the last week, we could have nipped the radio failure in the bud. Less than normal, naturally, but functional. We hams spend our hard earned money, yes, that is our fault, to be there when disaster strikes. We know darn well that public service radio systems are prone to failure in such a disaster. As are cellular phones, and land line telephones. We hams can at a moments notice get an operator where one is needed most. We have a room behind the upstairs comm room, just for us hams for communications to almost anywhere. If we should loose one repeater, we have upwards of 30 or so repeaters to back that one up.

But, HPD, HFD, HCSO and Metro don't need us. Their systems will NEVER go down, and IF they do, they don't need us.

We train weekly for such disasters.

They don't need us AMATEURS to show up professionals.

Yea...Right...

Case in point, last weekend.

WAKE UP, YOU RED TAPE WACKOS!!!!!!!!!!!!!!!!!!!!

I will get off my soap box now.

Sorry for the lecture.

Subject: [HoustonScan] My view of the flood...

<< I heard alot of interesting traffic on HPD mainly 460.125 heard a Police Chase last night >>

That would be Northeast Patrol, my people. It was a wild and woolly weekend for us. Was what you heard when we got the Lojack hit on the Navigator? Not that we had any computers to run the Lojack code to find out what kind of vehicle to look for, but we could tell when it was moving it narrowed it down.

The rest is only partially scanner related, delete at will....

For me, it started at 10:30 Friday night on my way to work. Tried to get around Wayside (flooded) and cut east across Tidwell to get to the Northeast Station. Got trapped at the Texaco at 59 and Tidwell by high water and had to call it quits there. I happened to have my own radio (list related tidbit) and told dispatch I was there and that's where I'd be for a while. Had 22 cars in that little parking lot. For some reason, the clerk closed the store at 11:30. He couldn't go anywhere, he was trapped with us, but he said he was supposed to close at 11:30 so he did. Turned out the parking lot lights too. Nice.

A bunch of people waded/swam over to the parking lot where I was because they saw me in uniform. Said they felt better over on my side of the Tidwell river. Not much I really could've done, but I guess it was better for them.

Managed to get back up on the freeway and sit on the overpass for a few hours in the rain while the street continued to fill up. I was listening to my radio off and on to conserve the 1 battery I had (and no 12v adapter). Pretty good rescue going on on Central, lost 1 dive team boat and 2 officers were in the water out of contact for about 1/2 hour. My friends involved said Fox did an outstanding job of locating them, flying only a couple feet over the water and smashing the trees down so the other rescue boat could get to them. It was during this that the Central Patrol channel (and a few others) went down. Talk about timing...

About 4 or 5 am I found out about the boat rescues going on further up 59 and went up there with the 1 HFD truck and 1 boat that had made it there. List related tidbit #2, found out their radios had crashed completely earlier in the morning. We were down to 3 channels (NW, SW, NS) after the generators failed. They told us they were switched over to battery power and would be completely down in 30 minutes. They were right. I don't know which was worse, losing the radios without warning or knowing it was inevitable and about to happen.

Stayed out with the HFD guys pulling people out of the boats at 59 and Little York until about 5 pm Saturday. I don't know if was due to the flood or having worked only nightshift for the last 9 yrs but I was really, really impressed/overwhelmed with the people who came to help us out.

We started with 1 boat and a Metro bus trying to evacuate people to a shelter up in Humble (another list note: I have an 800 radio and Humble being conventional 800, and still up and running, I was able to talk to them but not my own people). Metro driver said he would come back for another load

but promptly left and was never seen again. I flagged down a guy named Lionel driving a US Mail truck and arranged with him to load up with people and go to the shelter. I am sure DOT/osha/etc would've had a fit if they had seen us loading 50-75 people into a big delivery truck on the liftgate.

He left to the shelter in Humble and said he'd be back. After my disappointing experience with the Metro driver I was not optimistic. Well, he did come back. And back, and back. And called his nephew to get his other truck from home and bring that out too. All told he made about 7 trips to 2 or 3 different shelters for us, transporting 300-400 people. Youngest was a pair of twins 4 days old, oldest (that mentioned it) was 86. Several of them injured, but we had no access to an ambulance for anybody (and they would not have been able to take them anywhere anyway). They had some first aid people at the shelter so we figured getting them there was the best option we had. Even flagged down a guy driving a school bus and he was able to help us evacuate some of the people too.

During this is when the food started showing up. When the first pizzas showed up we realized that none of us had eaten in well over 12 hrs and we started shoveling it down between boat loads of people. I couldn't believe how much food people started bringing (they said the channel 11 crew out there with us had mentioned it) and it started pouring in. We even had a guy show up with 40 blankets from another shelter. Loaded food and blankets into the truck with the next load of people and sent it north again.

Did I mention that Lionel and his truck kept coming back? I couldn't believe it, we were in a real jam and he kept on coming back for more. At one point we had over 100 people under the bridge (out of the rain and lightening) and when he found that out he called his nephew to get his other truck from home. I am working on getting him an award from the Mayor for his help, we would've been lost without him. What do you do with a few hundred soaking wet people under a bridge in a flood in the rain?

More and more boats started showing up, and we got the last of the people cleared out pretty fast. We reached critical mass on the boats, just too many people running around and nobody knowing where anyone else had already checked, so we diverted them to Mesa / Tidwell (where the dumptrucks and front end loaders were getting people out of their houses).

I called the station and was told they were completely flooded in and there was not even a remote chance of my getting there. They said to sleep wherever I could and try again in the morning. I finally made it to the station at 7 am and worked until about 5 pm, then came back for my "regular" shift from 11 pm to 7 am.

It was a serious mess out there folks. There was a landing zone set up on Kelley in front of LBJ to land Lifeflight and National Guard Helicopters evacuating pediatric patients from Hermann. Even though our radios were back up at this point we were not able to communicate with them at all. I know it could've been done somehow, but nobody knew what to do.

And that leads me into another point. There has been basically no planning or training for an event like this. The police and fire depts were obviously overwhelmed, and having the radios go out made it all seem surreal. When I was talking to the HFD captain I was with he said their phones were out too (so were ours) and he could only call a few different fire stations. I asked him where their plans were for something like this and he just laughed. We realized we just had to keep a lid on the area we had access to and hope that it all worked. If something like this happens again (this was only the first tropical storm of the season remember) be prepared to fend for yourselves. Plan in advance. Don't count on us being able to get there (or even being aboe to find out where it is we neet to go to get you). Plan now.

Since joining the police dept I have almost never felt out of touch. With the exception of a few dead batteries and some other temporary snafu's, I have always been able to call for help (and expect it to arrive). Well, it started out with being able to call but not get anyone, then it went completely out. Like the HFD Captain said, we just kept a lid on it and worked it out as best we could.

Hopefully this will be a learning experience for all involved. I think the higher-ups need to fix a bunch of things, and maybe even talk to us "lower-downs" about how thing really happened.

1250. RE: [HoustonScan] Re: My view of the flood...and further Allison /HFD aftermath

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-06-12 13:32:22 UTC
From: Thomas McBarron
Topic: 1243 Message: 1250

Here is our agencies perspective of the flood. We worked 4 days with no food, water, telephones and very little sleep. There have since been 3 recoveries on Day 6 whioch will be posted on our next situation report which can be viewwed at www.stattsar.org. (You may want to read from the bottom up)

Last Update: June 10, 2001 9:00hrs

6/10/01 9:00:53 - Tropical Storm Allison Day 5. The rain let up and the flood waters started to receed rapidly Sunday night. Rohm & Haas dispatched their mobile command post which created a more manageble and secluded environment for incident commanders than the previous incident commander's location being inside a fire engine. STATTSAR brought 12 cases of bottled water for the Sheldon Volunteer Fire Department but due to an extended response shortly after we arrived with the water an Ozarka Bottled Water truck arrived to deliver a multitude of cases of bottled water. STATTSAR Squad 62 chauffered a South Lake Houston EMS paramedic to first respond in the area due to the high number of medical requests - most ending up being reassurance and urging individuals who are low on medication supplies with no drinkable water to seek an American Red Cross shelter. Flood Command then requested that STATTSAR and Katy Fire Department check an area which inundated trailer homes and rescues were attempted during the storm.STATTSAR deployed a 17' Duracraft aluminum boat to search one side of the street and Katy deployed a 14' aluminum boat to search the other side of the street. We quickly learned our boat was heavy to lift and not ideal for this mission due to the need to lift the boat over low water areas or to manuever around trailer homes washed off their foundation. The Katy Fire Department onthe other hand, had lighter boats and were more manueverable. Additionally, they had a portable generator on the boat with a scene light to illuminate their way as opposed to our flood lights on the boat. All vehicles and trailers were checked for for signs of life and lack thereof. Our search teams were under the direction not to make forcible entry into a trailer unless a situation imminent to life or safety was occurring. It was difficult to see thru most of the windows due to condensation forming on the inside, however some trailers had windows broken out from the flood waters. The trailers were a total loss with everything inside strewn about. It is difficult to make a cursory check for bodies due to the trailer insulation covering everything inside the trailer. Numerous deceased pets were located, no human bodies were located. Two weapons were found outside trailers which the location was noted and delivered to the Command Post. During these operations the water level was dropping rapidly and due to darkness we suspended the operation until daylight and recommended that cadaver / forensic canines be used to re-search the area we covered and continue the job. Returning from this assignment we learned of a hazardous materials

incident approximately 1 mile southeast of our location where a rail car was leaking hydrogen flouride gas and evacuations were under way in the neighborhood just north of the train. Command was holding us in staging for the possibility of evacuating residents in high water areas. The evacuation was changed to a shelter in place and STATTSAR was released by command after the hazardous materials incident was cleared, As STATTSAR personnel were rehabbing and returning to service, a request from the Highlands Volunteer Fire Department was received. At this time, it appears that the water is too swift for our teams to safely effect a rescue and were put on standby. Highlands reported people in the trees with the US Coast Gaurd effecting helicopter rescues.

6/09/01 10:37:51 - Tropical Storm Allison Day 5. Reports of 22" rain falling at Sheldon Flood Command is underscored by the operations of the day. Over 500 rescues of immeninent life were performed by STATTSAR personnel, approximately 2400 by all agencies working with Sheldon Flood Command for the day. Those rescued and evacuated were brought to Sheldon Station 1 (location of Command) for medical evaluation and shelter from the heavy rains. There is no food in the area and the only passable route to Command Post was cut off when the bridge was washed out and the flood waters continue to rise with water lapping at the front door of Shelson Station #1 (command post). On top of that, over 1500 evacuess are in the station with 4 bathrooms, no food, no drinking water, no telephones. Limited medical care is provided with a board room converted in to a medical clinic. The Salvation Army and the American Red Cross are unable to get any supplies to Sheldon Flood Command due to impassable roads. The US Coast Gaurd Helo 6325 is making rescues dropping rescue swimmers and picking people off of roof tops. During the middle of the day an Air Ops Division was created to land National Gaurd Black Hawk helicopters adn the Harris County Aerial Law Enforcement Response Team Huey to evacuate medical patients from the station. 132 people were evacuated by these resources. 2 Texas Task Force 1 Swift water teams have been deployed in the area and are assisting in effecting rescues. National Gaurd Duece and halfs showed up at the station and mass evacuations of those at the station began, taking them to the Sheldon Road Baptist Church. Numerous water rescues continue and rechecking occupied trailers we couldn't get to now show those trailers were washed off their cinder blocks, submerged, and rolled over in the flowing flood waters. There is a list of missing persons and a list of those arriving at the station had been created. A long line of refugees have been making their way down C.E. King Parkway to the fire station. Fire Deparment six-bi vehicles have been driving through the flooded areas and picking people and their pets up as well. An emphasis was placed on making large and small animal rescues (due to our new training on this) as well. STATTSAR demobilized late Saturday night and barely made it back to district to reorganize and rehab.

6/08/01 xx:xx:xx - Tropical Storm Allison Day 4. Tropical Storm Allison Day 4. Heavy torrential rains have been falling most of the night with severe lightning and high winds. Sheldon Fire Department requested our assistance to respond to Flood command with a flood boat and water rescue team. Enroute we were disregarded and the responding teams continued to a staging location at North Channel EMS. STATTSAR was then requested to have a swift water

technician respond with Cloverleaf Fire Department for a reprted male trapped in the water on Wallisville road. This turned out to be unfounded. STATTSAR was then requested to respond to a staging location by Sheldon Flood Command and once there requested to provide rescue services. The flood boat was not used due to it not being designed for swift water rescue. Personnel responded on boats in use and on rescue apparatus. STATTSAR Chief McBarron was requested to assist Sheldon Flood Command. DUties included fulfilling the request by Sheldon Command to activate the Texas Task Force 1 for swift water teams, requesting helicopters for countless reports of people stranded on roofs with imminent danger of life, and contacting the Salvation Army and American Red Cross to provide mass care. STATTSAR personnel effecting rescues made rescues ranging from picking people off car tops to making forcible entry in homes and trailers after hearing banging from within to extricate trapped persons who had 1-3 inches of air left with rapidly rising water. Power was lost frequently and the telephone system went making cell phones invaluable. STATTSAR Communications became the primary system for Sheldon Flood Command due to better interoperability on the 800 system. Channelview, Cloverleaf and Crosby fire departments also mutual aided Sheldon Flood Command. During the night, the Sheldon Volunteer Fire Department lost two apparatus due to flood waters on one rescue involving critically injured persons with severe burns due to a house fire caused by lightening. The house was unsalvagable as fire hydrants couldn't be found under the water and the water was too deep for apparatus to get close and draft. The structure was a total loss and burned to the water level. Many injured evacuess were cared for and treated by South Lake Houston EMS and North Channel EMS, altough mostly South Lake Houston EMS.

6/07/01 08:00:25 - Tropical Storm Allison Day 3. The rains have begun and streets are flooded. Over 500 homes are flooded from 10" - 14"+ rain in a large area south of Downtown Houston and 5"+ over most of the entire Houston - Galveston region up to Huntsville, Texas. Currently STATTSAR Flood Command is in the process of deploying an airboat with a swift water rescue team and paramedic in the hardest impact areas.

6/06/01 12:21:32 - Tropical Storm Allison Day 2. STATTSAR Made a total of 26 rescues during Day 1. The rains have ceased and flood waters are receeding. All personnel are reconditioning equipment and getting rest and food.

6/06/01 09:11:45 - Tropical Storm Allison Day 2. STATTSAR has de-escalated the rediness to an Alert Level. The Houston area received anywhere from 3" - 14" rain overnight. All personnel are on alert. The center of the now tropical depression Allison is over Montgomery County with moderate rainfall. Most urban flooding has subsided with creeks, ditches and rivers at maximum capicity. Meteorologists are unable to predict if the storm will move back over the Houston area and bring more rainfall and flooding or if the storm will move north - northwest and spare the Houston area more rainfall. A total number of persons rescued and type of rescues will be released once we have reviewed all of our incident reports from this storm.

6/05/01 23:01:22 - Tropical Storm Allison Day 1. STATTSAR rescue teams have rescued more than 21 persons to date.The number of stranded motorists on

Loop 610 increased to 11 with 1 being treated on location who refused transport to a medical facility.Assistance was rendered by the Houston Fire Department to effect the rescue. The Swift water rescue team from Rescue Techs was unable to get to the location due to heavy traffic and flooded roads.

6/05/01 22:18:15 - Tropical Storm Allison Day 1. STATTSAR rescue teams have rescued more than 10 persons to date. Currently 9 stranded motorists are on top of their cars in over 8 feet of swift water on Loop 610 under the Market Street bridge. 1 stranded motorist requires emergency medical attention. STATTSAR rescue personnel and Houston Fire Department personnel are awaiting an air boat and a swift water rescue team provided by Rescue Techs to safely rescue the stranded motorists.

6/05/01 18:06:56 - Tropical Storm Allison Day 1. STATTSAR rescue teams are currently effecting water rescues throughout the Houston area due to over 11 inches of rain in some areas. To date, over 7 persons have been rescued from the flood waters by STATTSAR rescue personnel. All agencies in the surrounding Houston area are experiencing critical resource management due to the weather.

Assistance Needed from Public: At this time STATTSAR is requesting donations from the general public to cover the extraordinary expenses incurred with this storm and the numerous massive searches conducted recently. Additional needs include: cellular phone service, computers, copy machines, fax machines, generators, catering tent, folding tables, folding chairs, 5 gallon water coolers, ice machine, enclosed trailer and an unleaded Recreational Vehicle for a mobile Command Center.

6/05/01 16:26:48 - Tropical Storm Allison Day 1. STATTSAR has escalated its readiness level to status condition red due to numerous incoming reports of widespread flooding with 6"+ rain still to be expected

6/05/01 14:00:24 - Tropical Storm Allison Day 1.STATTSAR has escalated its readiness level to status condition yellow due to the rapid formation of Tropical Storm Allison 80 miles south-southwest of Galveston island movement north 10-13 mph.

To Bring Them Home,

Thomas McBarron
Chief
South Texas Advanced Tactical Team Search & Rescue

Yes, I agree. There should have been a few more nets for something like this. N5UOA was WAY too busy during all of this. We should have a general info traffic net, as well as emergency, and volunteer routing. Let's see what happens.

No good deed goes unpunished.

73, de KD5AXG

1253. Flood freqs

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-06-11 00:46:35 UTC
From: Myles Barkman
Topic: 1253 Message: 1253

The American Red Cross has been using 47.420 MHz today in the area. First time I've heard it used around here.

Anyone find any freqs used by the National Guard helicopters and ground troops this weekend?

Coast Guard Helos been using 157.050 MHz Marine Channel 21A.

Harris County Office of Emergency Management was using their talkgroup on the Harris County trunked system.

Anyone catch comms from Search and Rescue organizations?

How about any FEMA freqs used in the area? Anyone know the best ones to listen for?

Has the Civil Air Patrol been active flood rescue or damage assessment?

Sounds like there is a threat of flooding along the Trinity River in the Liberty area.

galveston county was using there OEM channels on there 800 system as was League city. TDPS was using there primary frequecy for huston for there coverage. 159.210
Galveston city was using there OEM 800 as well as the disaster channels 1&2 on there 800 system Pasadena was swamped using al of there 800 system with the fire dept taking the most of it.I using 4 scanners so i got a good aspect of what was going on i didnt try the low bands though. did hear a lot of FRS radio traffic close to me though using my frs system on scan .there was also a lot of ham traffic 147.410 as RACES was called up and was in full force.

regards
sandyj

1255. HFD "Masks"?

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-06-13 04:58:49 UTC
From: zulu
Topic: 1255 Message: 1255

I understand basically there is an electronic way for the apparatus to communicate with dispatch.. but does anyone have details on how this works? Maybe what company produces these devices?

Is there anyway to receive the transmissions from a scanner and decode them?

Also, I hear sometimes.. example "Ladder 33 to Dispatch, I need this unit to show as Ladder 34" or whatever, then dispatch will tell them to Standby and then a few seconds later.. "Ladder 34, key your mic.. key your mic.." then .. the truck responds .. "Ladder 34... " .. and dispatch, "Ladder 34 updated"

Can dispatch see what unit keyed their mic up? And does this work for handhelds? (example; Engine 77A or B) ..

How does this "mask" stuff work.. is it one huge screen with every unit and then its status?

Thanks =) sorry for the weekly bombing of questions
zulu

Zulu,

The apparatus communicate with dispatch via databursts on their frequency which allows the dispatcher to see their status as enroute, on scene, etc... really not much to decipher. I won't state how to decipher this data because it is the same way to decipher un-encrypted MDT communication with law enforcement and I strongly encourage others to follow my example for police safety reasons.

It is not difficult and is a feature with the more sophisticated radio systems (which HFD uses) to display the radio ID when you key up. So, if you have a pirated talk group ID or make or are an unauthorized user on the system, they will know - but primarily that feature is so they know what unit keyed up. Now, whether they use that all the time when they are busy....

The HFD CAD system has a screen which displays each unit and is color coded by their status. IE, light blue for on the air, etc, ...

Mike, et al.

The amateur radio running out of the Harris County OEM was extremely helpful but other than that it was chit chat about what people were hearing on the scanner and watching TV. As long as this chit chat continues and prevents us from trying to get urgent messages out we won't consider amateur radio other than that, amateur. I was definitely disappointed in the low level of professionalism, it reminded me of a bunch of truck drivers on a CB. Like I said, the HAMs running out of the Harris County OEM were great, in fact I'd like to meet the voice on the other side to thank them personally for all they did for us.

BTW the term is MAST not Mask. I'm not certain, but I think it stands for Mobile Apparatus Status Terminal.

I do not "enjoy" the "squonks" when the apparati are updating. I wish there was a way to delete these updates. I tried using the PL tone of 127. but the tones go out using the PL.

Happy Scanning

This is not OTAR, This is Motorola's MDC1200 Status Messaging system.
You can send canned messages but nothing free text.

Otar is Over the Air Rekeying for encryption

Here is the the new version of MDC that is being released:

Hi, unless someone gives them the 800 radios it's gonna be a while before they switch if they do. But "rumor" has it that the commissioners for Harris County want everybody on the trunked system. and once that is done They might spread along they coast form Beaumont to Freeport. Mind you this is just a "rumor."

New equipment to get agencies talking
Federal grant will fund purchase of radios, dispatch consoles
By KIM CANON
Copyright 2001 Houston Chronicle
Fire departments and emergency medical service units in most of unincorporated Harris County will soon be able to communicate directly with each other as well as other county law enforcement agencies.
The county has used part of a $300,000 federal grant to purchase more than 40 portable radios and 13 mobile dispatch consoles, which have been distributed to fire and EMS departments serving the county's unincorporated areas. The radios and dispatch units -- all of which use the county's 800 megahertz frequency system -- will be tied into the sheriff's department's central dispatch station.
"Harris County has a 800 megahertz high-tech thinking system that has many frequencies," said Fred Windisch, chief executive officer of the Harris County Fire and Emergency Services Department. "One keys up on the radio and picks a frequency, which allows you to talk to another radio user. They are like pipelines."
Windisch compares the county's system to a wagon wheel. The center of the wheel is the sheriff's department's central dispatch operation, located in downtown Houston. The spokes shooting off from the center are the agencies utilizing the 800 megahertz system, which include the Office of Emergency Management, the constables' and sheriff's offices and the fire and EMS departments.

If there was a massive wreck on north Interstate 45, Windisch said, the responding fire department could use one of seven designated frequencies to contact sheriff's central dispatch, which could then contact law enforcement agencies to send equipment and aid. That fire department could also contact other fire departments and EMS dispatch centers.

"It's really a step in the right direction in getting everyone talking to each other," Windisch said.

The 40 fire and EMS departments that serve unincorporated Harris County now use up to three different radio systems -- UHF, high-band and low-band -- and have to jump around to find available frequencies. While the 800 MHz system is not meant to replace the individual department's radios, it is meant to assist them, Windisch said.

"Right now everyone is on different frequencies, so they have to go through several layers to communicate with each other," Windisch said. "The bottom line is they can't talk to each other. Now everyone can talk to each other through the fire talk groups, or frequencies."

The Fire and Emergency Services Department will distribute the portable radios to 90 percent of fire and EMS agencies. Each of the 12 dispatch centers serving agencies in unincorporated Harris County received a mobile dispatch console. The radio system is expected to be fully operational by July 1.

Cypress Creek EMS, which serves northwest Harris County, has one mobile dispatch console installed in its mobile communications van and is scheduled for another installation at its dispatch center. The department will also receive one portable radio.

"There has always been an inherent problem in county agencies communicating with each other," said Toivo Sari, information systems manager for Cypress Creek EMS. "Going to the 800 megahertz system will put us in touch with each other. It can only enhance communications and give us quicker access to additional resources."

The federal grant purchased another 70 or so portable radios for use by the sheriff's department, Windisch said. These will be stored and ready for use in the event of a massive search and rescue effort or other coordinated law enforcement operation.

While county agencies can talk to each other, they still cannot communicate by radio frequency with the city of Houston's police or fire departments, which use a 400 megahertz system. Talk has centered around the two entities both switching to a 700 megahertz system, but the cost involved, Windisch said, is estimated to be $30 million or so.

"Wouldn't it be good for all to be on a countywide communication system for the citizens?" Windisch said.

He said there is room on the county's 800 megahertz system for city of Houston agencies.

A final component of the grant purchase is 15 emergency decontamination showers, which can be used in the event of a terrorist incident involving chemical weapons, Windisch said.

Six portable shower systems are located strategically throughout the county, he said, including three in northwest Harris County. A training program is being developed for those who will be responsible for operating the decontamination showers.

It would be nice if the County would allow search and rescue teams who are county resources to be able to access a radio from the grant also. But, since we do everything a fire deaprtment does except put wet stuff on the red stuff we are not eligible. I do not think we needed to put much wet stuff on the red stuff this weekend! In the article it states the Sheriffs department wants to horde radios for a search and rescue incident. For who? Themselves? They are not trained to perform search and rescue duties. Get the radios in the hands of those trained to do the task.

Thomas,
I would contact Fred and talk to him about it. Does your ID on the Pasadena trunk not work for you?

You should if you want to, be able to contact the Harris County CTC (Central Technology) and talk to them about leasing or buying radios and airtime.

Also the "VFD's" that you talk about have contracts with the various "RFPD's" or "ESD's" to make them an extension of a County Agency (Commissioners Court) and thus have the ability to get on the system. They also have to sign a very strict, very outlined contract with the County CTC, and still pay monthly airtime.

The Radio's we are talking about are 1 Mobile / Base for each of the Dispatch centers in the county (Which (HCEC) Harris County Emergency Communications does have one, Which I believe is now who is dispatching you) and 2 Hand Helds for the VFD's and EMS for Interoperability purposes only. Most of the agencies that are getting them are not on the system already, and don't want to be. They are being given them for Fred's Dream of Everyone being able to talk to everyone else. Of which this Grant was pursued by the Harris County Fire Marshal's office themselves...

- Rusty

New equipment to get agencies talking
Federal grant will fund purchase of radios, dispatch consoles
By KIM CANON
Copyright 2001 Houston Chronicle
Fire departments and emergency medical service units in most of unincorporated Harris County will soon be able to communicate directly with each other as well as other county law enforcement agencies.
The county has used part of a $300,000 federal grant to purchase more than 40 portable radios and 13 mobile dispatch consoles, which have been distributed to fire and EMS departments serving the county's unincorporated areas. The radios and dispatch units -- all of which use the county's 800 megahertz frequency system -- will be tied into the sheriff's department's central dispatch station.
"Harris County has a 800 megahertz high-tech thinking system that has many frequencies," said Fred Windisch, chief executive officer of the Harris County Fire and Emergency Services Department. "One keys up on the radio and picks a frequency, which allows you to talk to another radio user. They are like pipelines."
Windisch compares the county's system to a wagon wheel. The center of the wheel is the sheriff's department's central dispatch operation, located in downtown Houston. The spokes shooting off from the center are the agencies utilizing the 800 megahertz system, which include the Office of Emergency Management, the constables' and sheriff's offices and the fire and EMS departments.
If there was a massive wreck on north Interstate 45, Windisch said, the responding fire department could use one of seven designated frequencies to contact sheriff's central dispatch, which could then contact law enforcement agencies to send equipment and aid. That fire department could also contact other fire departments and EMS dispatch centers.
"It's really a step in the right direction in getting everyone talking to each other," Windisch said.
The 40 fire and EMS departments that serve unincorporated Harris County now use up to three different radio systems -- UHF, high-band and low-band -- and have to jump around to find available frequencies. While the 800 MHz system is not meant to replace the individual department's radios, it is meant to assist them, Windisch said.
"Right now everyone is on different frequencies, so they have to go through several layers to communicate with each other," Windisch said. "The bottom

line is they can't talk to each other. Now everyone can talk to each other through the fire talk groups, or frequencies."
The Fire and Emergency Services Department will distribute the portable radios to 90 percent of fire and EMS agencies. Each of the 12 dispatch centers serving agencies in unincorporated Harris County received a mobile dispatch console. The radio system is expected to be fully operational by July 1.
Cypress Creek EMS, which serves northwest Harris County, has one mobile dispatch console installed in its mobile communications van and is scheduled for another installation at its dispatch center. The department will also receive one portable radio.
"There has always been an inherent problem in county agencies communicating with each other," said Toivo Sari, information systems manager for Cypress Creek EMS. "Going to the 800 megahertz system will put us in touch with each other. It can only enhance communications and give us quicker access to additional resources."
The federal grant purchased another 70 or so portable radios for use by the sheriff's department, Windisch said. These will be stored and ready for use in the event of a massive search and rescue effort or other coordinated law enforcement operation.
While county agencies can talk to each other, they still cannot communicate by radio frequency with the city of Houston's police or fire departments, which use a 400 megahertz system. Talk has centered around the two entities both switching to a 700 megahertz system, but the cost involved, Windisch said, is estimated to be $30 million or so.
"Wouldn't it be good for all to be on a countywide communication system for the citizens?" Windisch said.
He said there is room on the county's 800 megahertz system for city of Houston agencies.
A final component of the grant purchase is 15 emergency decontamination showers, which can be used in the event of a terrorist incident involving chemical weapons, Windisch said.
Six portable shower systems are located strategically throughout the county, he said, including three in northwest Harris County. A training program is being developed for those who will be responsible for operating the decontamination showers.

1267. Harris County 800mHz and interoperability

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-06-14 17:43:39 UTC
From: Thomas McBarron
Topic: 1262 Message: 1267

Rusty,

I can tell you, and I am willing to go to bat for Fred, that the HC OEM talkgroup was a lifesaver. It was not possible to get through on a phone line at all(either busy or out of service) and the HAMs had way to much chit chat to get through. Finally I decided to follow Ponderosa VFD's example and bump them on the talkgroup (although I was afraid of repercussions. All I've ever heard on this talk group was rain gauge info). It was nirvanna. Harris County OEM did everything they could to get us the resources we needed in Sheldon Flood Command in cluding Blackhawks, a Coast Guard helo, National Gaurd duece and a halfs and additional boats. It was reassuring knowing others were out there trying to help us as well. Without the 800mHz talkgroup, we would have really had a lot more serious problems, and most likely more fatalities. I have been wanting to commend Fred but waiting until his work load slows down. Fred, if your lurking, Good Work!

We have an ILA with Harris County ready for our Board of Directors to sign so we can at least access the mutual aid frequencies. Quite honestly, we can't afford to pay $90/radio/year to use the Harris County 800mHz system which would be really useful for us where we can't reach the Pasadena system.

I believe a grant needs to be found and applied for so that departments and agencies who can't afford to access the radio system can receive either an entire or partial grant to pay for the access. We have been looking for one ourselves but since we are not a fire supression entity or a law enforcement agency, we are not eligible for the grant, nor would an agency be eligible to sponsor us under the grant.

We keep looking and will keep trying though.

To Bring Them Home,

Thomas McBarron
Chief

Thomas,
I would contact Fred and talk to him about it. Does your ID on the Pasadena trunk not work for you?

You should if you want to, be able to contact the Harris County CTC (Central Technology) and talk to them about leasing or buying radios and airtime.

Also the "VFD's" that you talk about have contracts with the various "RFPD's" or "ESD's" to make them an extension of a County Agency (Commissioners Court) and thus have the ability to get on the system. They also have to sign a very strict, very outlined contract with the County CTC, and still pay monthly airtime.

The Radio's we are talking about are 1 Mobile / Base for each of the Dispatch centers in the county (Which (HCEC) Harris County Emergency Communications does have one, Which I believe is now who is dispatching you) and 2 Hand Helds for the VFD's and EMS for Interoperability purposes only. Most of the agencies that are getting them are not on the system already, and don't want to be. They are being given them for Fred's Dream of Everyone being able to talk to everyone else. Of which this Grant was pursued by the Harris County Fire Marshal's office themselves...

- Rusty

It would be nice if the County would allow search and rescue teams who are county resources to be able to access a radio from the grant also. But, since we do everything a fire deaprtment does except put wet stuff on the red stuff we are not eligible. I do not think we needed to put much wet stuff on the red stuff this weekend! In the article it states the Sheriffs department wants to horde radios for a search and rescue incident. For who? Themselves? They are not trained to perform search and rescue duties. Get the radios in the hands of those trained to do the task.

New equipment to get agencies talking
Federal grant will fund purchase of radios, dispatch consoles
By KIM CANON
Copyright 2001 Houston Chronicle
Fire departments and emergency medical service units in most of unincorporated Harris County will soon be able to communicate directly with each other as well as other county law enforcement agencies.
The county has used part of a $300,000 federal grant to purchase more than 40 portable radios and 13 mobile dispatch consoles, which have been distributed to fire and EMS departments serving the county's unincorporated areas. The radios and dispatch units -- all of which use the county's 800 megahertz frequency system -- will be tied into the sheriff's department's central dispatch station.
"Harris County has a 800 megahertz high-tech thinking system that has many frequencies," said Fred Windisch, chief executive officer of the Harris County Fire and Emergency Services Department. "One keys up on the radio and picks a frequency, which allows you to talk to another radio user. They are like pipelines."
Windisch compares the county's system to a wagon wheel. The center of the wheel is the sheriff's department's central dispatch operation, located in downtown Houston. The spokes shooting off from the center are the agencies utilizing the 800 megahertz system, which include the Office of Emergency Management, the constables' and sheriff's offices and the fire and EMS departments.
If there was a massive wreck on north Interstate 45, Windisch said, the responding fire department could use one of seven designated frequencies to contact sheriff's central dispatch, which could then contact law enforcement agencies to send equipment and aid. That fire department could also contact other fire departments and EMS dispatch centers.
"It's really a step in the right direction in getting everyone talking to each other," Windisch said.
The 40 fire and EMS departments that serve unincorporated Harris County now use up to three different radio systems -- UHF, high-band and low-band -- and have to jump around to find available frequencies. While the 800 MHz system is not meant to replace the individual department's radios, it is meant to assist them, Windisch said.
"Right now everyone is on different frequencies, so they have to go through several layers to communicate with each other," Windisch said. "The bottom line is they can't talk to each other. Now everyone can talk to each other through the fire talk groups, or frequencies."
The Fire and Emergency Services Department will distribute the portable radios to 90 percent of fire and EMS agencies. Each of the 12 dispatch centers serving agencies in unincorporated Harris County received a mobile dispatch console. The radio system is expected to be fully operational by July 1.
Cypress Creek EMS, which serves northwest Harris County, has one mobile dispatch console installed in its mobile communications van and is scheduled

for another installation at its dispatch center. The department will also receive one portable radio.
"There has always been an inherent problem in county agencies communicating with each other," said Toivo Sari, information systems manager for Cypress Creek EMS. "Going to the 800 megahertz system will put us in touch with each other. It can only enhance communications and give us quicker access to additional resources."
The federal grant purchased another 70 or so portable radios for use by the sheriff's department, Windisch said. These will be stored and ready for use in the event of a massive search and rescue effort or other coordinated law enforcement operation.

Hi, unless someone gives them the 800 radios it's gonna be a while before they switch if they do. But "rumor" has it that the commissioners for Harris County want everybody on the trunked system. and once that is done They might spread along they coast form Beaumont to Freeport. Mind you this is just a "rumor."

New equipment to get agencies talking
Federal grant will fund purchase of radios, dispatch consoles
By KIM CANON

Copyright 2001 Houston Chronicle
Fire departments and emergency medical service units in most of unincorporated Harris County will soon be able to communicate directly with each other as well as other county law enforcement agencies.
The county has used part of a $300,000 federal grant to purchase more than 40 portable radios and 13 mobile dispatch consoles, which have been distributed to fire and EMS departments serving the county's unincorporated areas. The radios and dispatch units -- all of which use the county's 800 megahertz frequency system -- will be tied into the sheriff's department's central dispatch station.
"Harris County has a 800 megahertz high-tech thinking system that has many frequencies," said Fred Windisch, chief executive officer of the Harris County Fire and Emergency Services Department. "One keys up on the radio and picks a frequency, which allows you to talk to another radio user. They are like pipelines."
Windisch compares the county's system to a wagon wheel. The center of the wheel is the sheriff's department's central dispatch operation, located in downtown Houston. The spokes shooting off from the center are the agencies utilizing the 800 megahertz system, which include the Office of Emergency Management, the constables' and sheriff's offices and the fire and EMS departments.
If there was a massive wreck on north Interstate 45, Windisch said, the responding fire department could use one of seven designated frequencies to contact sheriff's central dispatch, which could then contact law enforcement agencies to send equipment and aid. That fire department could also contact other fire departments and EMS dispatch centers.
"It's really a step in the right direction in getting everyone talking to each other," Windisch said.
The 40 fire and EMS departments that serve unincorporated Harris County now use up to three different radio systems -- UHF, high-band and low-band -- and have to jump around to find available frequencies. While the 800 MHz system is not meant to replace the individual department's radios, it is meant to assist them, Windisch said.
"Right now everyone is on different frequencies, so they have to go through several layers to communicate with each other," Windisch said. "The bottom line is they can't talk to each other. Now everyone can talk to each other through the fire talk groups, or frequencies."
The Fire and Emergency Services Department will distribute the portable radios to 90 percent of fire and EMS agencies. Each of the 12 dispatch centers serving agencies in unincorporated Harris County received a mobile dispatch console. The radio system is expected to be fully operational by July 1.
Cypress Creek EMS, which serves northwest Harris County, has one mobile dispatch console installed in its mobile communications van and is scheduled for another installation at its dispatch center. The department will also receive one portable radio.
"There has always been an inherent problem in county agencies communicating with each other," said Toivo Sari, information systems manager for Cypress Creek EMS. "Going to the 800 megahertz system will put us in touch with each other. It can only enhance communications and give us quicker access to

additional resources."
The federal grant purchased another 70 or so portable radios for use by the sheriff's department, Windisch said. These will be stored and ready for use in the event of a massive search and rescue effort or other coordinated law enforcement operation.
While county agencies can talk to each other, they still cannot communicate by radio frequency with the city of Houston's police or fire departments, which use a 400 megahertz system. Talk has centered around the two entities both switching to a 700 megahertz system, but the cost involved, Windisch said, is estimated to be $30 million or so.

-----Original Message-----
From: Windisch, Fred (Fire Marshal's Office)

here I am

HCSO does not hoard radios; they have a bank of 50??? or so to be distributed to ANYONE ON SCENE OF A DECLARED EMERGENCY; we haven't had one since the radios were just received.

the FESD got a portion of that WMD grant; and we got 30 handhelds and 13 control stations (for dispatch centers) to be distributed to fire and EMS agencies in UNINCORPORATED Harris County. That is what the fed money was for. We have installed the dispatch radios, 5 of the handhelds to date, and have established 5 mutual aid talk groups; each radio is set up to talk to SO, Constables, FESD, etc etc. Fire/EMS major events occur much more frequently than S&R situations. That does not mean I do not appreciate what ya'll do (so very very well).

I cannot help you with a grant; I have staff as I type this searching to get more dollars; I have informed FD's and EMS agencies they can purchase their own, or lease from Harris County. And, I want to purchase 20 boats to be distributed around the county,,,that is another wish for free money somewhere!!! yea, right.

I understand your pain, you should talk with Lt Bill Sparks or Deputy Steve Cathey at OEM/SO; these radios WILL be distributed for events that you will operate.

thanks
fcw

Fire departments and emergency medical service units in most of unincorporated Harris County will soon be able to communicate directly with each other as well as other county law enforcement agencies.
The county has used part of a $300,000 federal grant to purchase more than 40 portable radios and 13 mobile dispatch consoles, which have been distributed to fire and EMS departments serving the county's unincorporated areas. The radios and dispatch units -- all of which use the county's 800 megahertz frequency system -- will be tied into the sheriff's department's central dispatch station.
"Harris County has a 800 megahertz high-tech thinking system that has many frequencies," said Fred Windisch, chief executive officer of the Harris County Fire and Emergency Services Department. "One keys up on the radio and picks a frequency, which allows you to talk to another radio user. They are like pipelines."
Windisch compares the county's system to a wagon wheel. The center of the wheel is the sheriff's department's central dispatch operation, located in downtown Houston. The spokes shooting off from the center are the agencies utilizing the 800 megahertz system, which include the Office of Emergency Management, the constables' and sheriff's offices and the fire and EMS departments.
If there was a massive wreck on north Interstate 45, Windisch said, the responding fire department could use one of seven designated frequencies to contact sheriff's central dispatch, which could then contact law enforcement agencies to send equipment and aid. That fire department could also contact other fire departments and EMS dispatch centers.
"It's really a step in the right direction in getting everyone talking to each other," Windisch said.
The 40 fire and EMS departments that serve unincorporated Harris County now use up to three different radio systems -- UHF, high-band and low-band -- and have to jump around to find available frequencies. While the 800 MHz system is not meant to replace the individual department's radios, it is meant to assist them, Windisch said.
"Right now everyone is on different frequencies, so they have to go through several layers to communicate with each other," Windisch said. "The bottom line is they can't talk to each other. Now everyone can talk to each other through the fire talk groups, or frequencies."
The Fire and Emergency Services Department will distribute the portable radios to 90 percent of fire and EMS agencies. Each of the 12 dispatch centers serving agencies in unincorporated Harris County received a mobile dispatch console. The radio system is expected to be fully operational by July 1.
Cypress Creek EMS, which serves northwest Harris County, has one mobile dispatch console installed in its mobile communications van and is scheduled for another installation at its dispatch center. The department will also receive one portable radio.
"There has always been an inherent problem in county agencies communicating with each other," said Toivo Sari, information systems manager for Cypress Creek EMS. "Going to the 800 megahertz system will put us in touch with each

other. It can only enhance communications and give us quicker access to additional resources."
The federal grant purchased another 70 or so portable radios for use by the sheriff's department, Windisch said. These will be stored and ready for use in the event of a massive search and rescue effort or other coordinated law enforcement operation.
While county agencies can talk to each other, they still cannot communicate by radio frequency with the city of Houston's police or fire departments, which use a 400 megahertz system. Talk has centered around the two entities both switching to a 700 megahertz system, but the cost involved, Windisch said, is estimated to be $30 million or so.
"Wouldn't it be good for all to be on a countywide communication system for the citizens?" Windisch said.
He said there is room on the county's 800 megahertz system for city of Houston agencies.
A final component of the grant purchase is 15 emergency decontamination showers, which can be used in the event of a terrorist incident involving chemical weapons, Windisch said.
Six portable shower systems are located strategically throughout the county, he said, including three in northwest Harris County. A training program is being developed for those who will be responsible for operating the decontamination showers.

The ID that STATTSAR has works fine on the Pasadena system. But the coverage for the North and west sides of town are limited, we would like to increase the coverage but the price they want to charge for system use is for us unbearable. A search is an emergency and a process that means having to wait for another set of steps before it can begin is not a good thing.

1279. HFD 2 Alarm High Rise 6/17/01

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-06-17 20:39:22 UTC
From: Dave
Topic: 1279 Message: 1279

I see according to the HFD active incidents page, that HFD is working a 2 Alarm High-Rise at S/Sgt Macario Garcia Dr and V Ave. It shows that 29 units are assigned and 2 alarms have been called. Anyone have more info? I'm in Alabama, so I don't have access to Houston local news. Also, I'm new to this list, is there anywhere on the web where I can listen to HFD?

Thanks,
Dave

I just turned on my scanner and found the incident on 453.675. It is definitely a working fire, but I'm not sure what is burning. Whatever it is has at least four stories though, and they have a couple of towers in operation. I think it is some type of industrial bldg. From the sounds of the traffic, the fire is under control. I don't know of any live HFD scanners.

You can hear some of the transmissions on A4, but apparently some of the units are on D4, as I seem to be hearing only part of the transmission. The fire seems to be in the hold of a ship. They are spraying it with foam from the fire boat and evacuating all HFD personnel from the ship itself.

Hello group,

For some strange reason, I cannot access the HFD active incidents web page. I have checked my settings and don't have problems with any other URL. I placed the pointer I am using in the subject of this message.

I am using a router with firewall support and a software firewall, as well, but am asked for permissions which does not happen in this case. I simply get a "page not found", "check internet settings, etc" message.

I first tried during the flood and have received the same message each time since. Thanks for any ideas.

Wade

Wade,
I could not access AI clicking on the URL you provided. I find one small difference in it and the one I successfully use. There is a _ between hfd and ai. the correct address as I read it is http://ci.houston.tx.us~hfd_ai/
Good luck.
Also: other HoustonScan memebers-does anyone have frequencies for fire departments in the Port O'Connor, Seadrift, Palacios, Olivia, Calhoun County, and Matagorda County area? I have checked the conventional sources-Police Call and several websites but the only FD I find is Port Laavaca. All of the above mentoined resources are derived from the FCC data based so the other dept's are either shopping for a "shame on you" award from Myles or are on some other service than fire so don't show up on the data bases as FD frequencies. I'll be in the Houston area in July and hopefully in the POC area fishing so if anyone turns up any of these frequencies before then, please post. I have the relevant marine freqs.

Thanks,

Joe Gay

1290. Re: Anyone w/ Info on the 2 Alarm? and Port O'Connor

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-06-20 03:22:43 UTC
From: joegay@frognet.net
Topic: 1286 Message: 1290

The radio traffic was interesting enough that someone telephoned me from Housotn to tell me about it. It was apparently a plastics wharehouse, a large one. Engine 39 apaarently saw the smoke as soon as they left the station because they immediately called the dispatcher to say, "You better give us a tac channel on this one." E39 also went on location laying two 4 1/2" lines (thats enough for close ot 2000 gallons per minute) and reported "we'er going onto fast attack with our deck gun." I was also told that the alarm level was actual 2 alaarms, 7 taps, which is only one less engine than a 4-11. I was told that there is a shortage of ladder trucks right now and thats why taps rathre than more alarms.

Rusty C.: thanks for the quick come back on POC etc. Your response time (5 minutes) is literally better than that of most HFD ambulances.

Take care all

Joe Gay

From: zerg90@webtv.net
Topic: 1287 Message: 1292

That Houston FD URL will not work for me.

From my trusty notebook - in Calhoun County - Countywide - 153.815R 453.15 154.98 156.24R 154.815R 155.73M 153.965M 159.03M 155.28 37.18 - Pt Lavaca 154.355R fire + 158.76 + 37.18 + 158.73R police + 155.73M - Seadrift 156.015 - Point Comfort 154.31

R = repeater output
M = mobile transmit freq
154.815R is probably the primary sheriff freq
37.18 is probably the old fire freq

FDs are in Pt Lavaca + Seadrift + Port OConnor + Point Comfort + Olivia

That is all that I have - you can probably weed out a few of the items by going to the FCC website and see if they are listed as school or highway dept freqs

One more - 155.22 for county schools - and 463 Mhz MED Freqs for ambulances

Seadrift Area Vol EMS is in Seadrift

That is all that I have. Peter S

From: DeputyChf8@aol.com
Topic: 1201 Message: 1293

Here's the info many of you guys are in need of:

A1 = Intermittantly used for dispatching of units (sometimes fire and sometimes EMS units which are in the station)

A2 = Primary FIRE dispatch whether or not units are on the air - it is the same information which is sent over the speakers at the stations unless they use only the microwave link.

A3 = Fire unit tactical channel as well as a channel for units to communicate and not tie up the primary dispatch channel - such as "410 to Engine 28 where are you broken down?" (Maintenance unit to Engine 28 asking for directions, which might occupy a minute or more of air time on the normal channel - NOT GOOD!)

A4 = Similar to A3 - Dispatcher assigns the tactical channel and controls their use - Units may request a TAC channel, but they are not supposed to do so by channel name with the exception of the non-repeated "D" channels when requested by a responding chief (they usually know which frequencies work best in particular high rise structures within their district).

A5 = This is the EMS TAC Dispatcher channel for communicating to units responding to EMS incidents (whether they be an ambulance, medic, or fire truck responding as either first out or assist). Many times an ambulance which has completed their assignment will remain on A5 to listen to other units responding to calls which they might be closer to and can then fairly "jump" the call and disregard the farther unit; otherwise all EMS units (Amb., Medic, or Supervisors) who are out and about for one reason or another but not responding to a call (On-Air EMS Units) are required to stay on A6 unless otherwise directed.

A6 = Primary EMS dispatch channel (you will sometimes hear the calls simulcast on A1 or A2 as well to make sure all on air and in station units receive the call). NO routine "after dispatch" radio traffic should be done on this channel unless directed by the dispatcher or an EMS supervisor. The only other tings you might occasionally hear is a unit calling on A6 for additional units (for multiple patients or requesting a basic unit vs a medic, etc.) or the dispatcher callin the unit if they have not acknowledged a run they were dispatched on.

A7 & A8 = These are the equivalent of A3 & A4 on the Fire side, but they are mostly used for communication between an EMS unit on scene and another EMS or fire unit responding to their location. Additionally, an on scene EMS unit may use the channels to communicate with an EMS Supervisor to verify proper care or non-transport protocols were followed before leaving the scene.

Again, these two channels are assigned by the dispatcher after a unit requests a channel to talk to another field unit ("Medic 7 to the dispatcher, requesting a channel to talk with Supervisor 8"----"Dispatcher to Supervisor 8 go to A7 and talk to Medic 7").

Hope this helps! Sorry to be so lengthy. Chris vW

From: joegay@frognet.net
Topic: 1287 Message: 1295

Peter and Wade,
Let me make sure I communicated this clearly. The last part of the URL is ~hfd_ai that is ~hfd [dash] ai. Since its underlined it's hard to see the dash in my message.
Wade,
Alternate route: go to
Firehouse.com
Live Dispatch
(towards the top of the page you will see:)
C.A.D.
Click on that and you'll find the Houston site

I think there's also a link on the official HFD site and on the local 348 site. I think I might have put those URL's in a message 15 or 20 back, probably just before the flood. If that doesn't work then the computer has beat me too. I'm familiar with that feeling.

Good luck and thanks for the POC freqs.

Joe Gay

Not really, Most EMS services were started by funeral homes. When the first started, They would respond to calls and would either go to the Hospital or the Funeral home depending on the Life status of the patient.

This is a virus -- It's a type that recirculates itself through the users address
book. I wouldn't go blaming the guy who sent it, because he probably doesn't even know it happened.

BUT.. it is a virus, so please DISREGARD this and delete it from your attachments
directory.

1307. Pasadena gas leak

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-06-25 23:16:51 UTC
From: Myles Barkman
Topic: 1307 Message: 1307

There is currently a gas leak in Pasadena near the intersection of Broadway and Randall. Houses four-deep from the leak have been evacuated and there is talk of more possibly being needed. Entex is on the scene. Operations are being held on Fire-2, TG 7312. The gas has gotten into the sewer system which is the cause of the evacuation. Guess it's hard to disperse in those pipes and there is probably enough methane already to add to the danger. I believe traffic has been blocked off in the area.

Date: 2001-06-27 01:25:33 UTC
From: Rusty Caufield
Topic: 1308 Message: 1308

Anyone heard 453.750 today?

City of Houston is broadcasting some type of constant data stream and it has disrupted use of Klein VFD's repeater up in the FM1960 area.

They are both licensed on it, But what ever happened to Co-Channel interference considerations when using / Building a system?

Houston first licensed the frequency in June 1988, Kline in March 1998. Wasn't that an old Houston water department frequency???? Never was used by the Fire dept.

From: Rusty Caufield - Work
Topic: 1308 Message: 1314

Yes, Used to belong to Houston Public Works and was abandoned when they went
to 800 (and they never gave it up). Shortly after Klein Co-licensed with the
City.

From: Thomas McBarron
Topic: 1316 Message: 1316

South Texas Advanced Tactical Team Search And Rescue (STATTSAR) is proud to release the new version of its interactive website at http://www.stattsar.org. The site contains comprehensive information on the organization and will soon contain a live computer aided dispatch feed on the SAR EOC page.

Aside from information on STATTSAR and the services provided, valuable public information is provided including information on how teenage women can prevent being abducted, information on those who have been abducted, and information on how to work with STATTSAR to implement Community Emergency Response Teams (CERT) for times of disaster.

This website is one more tool to assist us "to bring them home."

We welcome your comments and invite you to provide feedback to webmaster@.... To request a STATTSAR representative to make a presentation for your agency, please call us at (281)850-0631.

1317. Channels to monitor on 4th

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-07-03 13:43:05 UTC
From: G Sweatt
Topic: 1317 Message: 1317

Hello,

I live in Sugar Land and was wondering if anyone had a channel list for the fireworks and various operations for the Oyster Creek Park? Also, what would be the best channels to monitor to monitor that night? Anyone with a favorite?

Regards and thanks in advance. Everyone have a safe and fun 4th.

Greg

Also, check out the various business frequencies 151.000 to 151.955, 154.515 to 154.570, and 464.500, 464.550, 469.500, and 469.550 MHz. Also, there are some businesses on 451-452.000 MHz.

Happy scanning.

Seabrook 453.4750 Primary, 453.550 Car-to-Car, 153.3850 Fire Department
158.7750 City Workers

Lakeview (also shares with Shore Acres): 453.8250

CLEMC (EMS): 155.400
There's another ambulance service in Clear Lake, but I can't remember the frequency.

Nassau Bay PD: 453.1500
DeerPark PD : 154.7900

CIMA: 488.8875, 489.0875, 489.1125

I scan the Galveston County Trunk with these talkgroups:
53616 Kemah Police 1
53584 Kemah Police 2?
53648 Kemah Police 3?
62928 Kemah TAC?
53680 Kemah Fire
49616 Clear Lake Shores
50064 Galveston County (Mainland/North)
50128 Galveston County (Intercity?)
50224 Galveston County (Bacliff)
50256 Galveston County (Bacliff?)
51664 Galveston County Emergency Management
51696 Galveston County Emergency Management
59312 Bacliff/San Leon Fire
49712 Dickinson PD 1
49744 Dickinson PD 2?
49776 Dickinson PD 3?
49808 Dickinson PD 4?
49840 Dickinson PD 5?
49872 Dickinson PD Special Events?
49904 Dickinson Emergency Management
54384 Galveston County Rural EMS 1?
54416 Galveston County Rural EMS 2?
54448 Galveston County Rural BackChannel?
54704 Santa Fe Polce 1
54736 Santa Fe Police 2?
54576 Santa Fe Fire?
54896 Texas City Police 1
54928 Texas City Police 2?
54960 Texas City Police 3?
55088 Texas City Police 4?

55184 Texas City Fire 1
55248 Texas City Fire 2?
55216 Texas City EMS?
55472 DPS?

I scan the Harris County Trunk system (Baytown) with these Talkgroups:
11664 Harris County Pct 8 Dispatch
00560 Harris County Pct 8 Talkaround?
01360 Harris County Mutal Aid?
14352 Webster PD
14416 Webster TAC?
14448 Webster Fire
14832 Harris County TAC (South)

The ones with question marks are on the lists but I have not heard them personally.
Everything else I have heard. If you find anything, feel free to email me personally or through
the group, I get single emails so I will get it just as quick as everyone else (and it also helps everyone else in our area)

I've also started a weather yahoo group (HoustonWeather). It's only a month old and relays weather info and Public Info statements for Houston, Galveston, and College Station.

I just happen to be out when the alarm dropped. I was towing a car in from Austin Tx. going to SW Frwy and crossed beltway 8 and Westpark about 2 Am. There was HEAVY smoke visable from the tollroad, after I dropped I cruised down Westpark and checked it out , I arrived around 3 am just as they were sounding the 7-1 .

Greg,

You might want to try George at Houston Amateur Radio Supply in Spring. I you feel up to it you could try to make one yourself. You should be able to find 1.2V 600mAh Ni-CD batteries at EPO. Use very thin copper foil in lieu of wires to connect the individual batteries together. A high wattage soldering iron To solder them together. Just use the original as a model. I made one myself last year and it works well. If you have any other questions contact me off list. Good luck, 73...

1330. Help Needed

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-07-13 16:36:19 UTC
From: Douglas Fisher
Topic: 1330 Message: 1330

I have been developing the 245xlt Resource Page, which is a free scanning resource available at http://home.earthlink.net/~dougfisher/scanner.html. One of the best features of this page is the database of files containing preprogrammed frequencies for cities around the world. I often get requests for a Houston data file. Unfortunately, I haven't been able to convince anyone from the Houston area to send me theirs.

The Houston area is a classic example of a city where I need someone with local knowledge to develop a scanning plan because those of us who aren't familiar can't figure out what is really necessary. I don't know the difference between PD, DPS, Sheriff, Constable, etc. It also seems like there is lots of overlap with your different trunking systems which may require special handling.

In a perfect world, the ideal data file would include the different public safety agencies found around the Houston metro area, a bank with a few key aviation frequencies and maybe some frequencies for the Galveston area (since so many Houston visitors seem to head down that way). Maybe that isn't realistic, but I would be happy to evaluate any files people are willing to send.

If you own a 245xlt scanner, I was wondering if I could please get you to contribute your Houston area data file for your 245xlt (along with some brief documentation) to my database of cities around the world. Since you already have your scanner programmed, it won't take long to create the file! Please take a look at my webpage to see the free database I am building (which Uniden should have built a long time ago!).

http://home.earthlink.net/~dougfisher/scanner.html

Information on contributing can be found at the bottom of the page. I am looking for both trunked and conventional frequencies in the data files. UNFORTUNATELY, I CANNOT READ FILES FROM ANY COMMERCIAL PROGRAMS FOR THE 245XLT SUCH AS WINSCAN, WINSTAR, ETC. Please use the freeware utilities found on my site!

I am also interested in other 245xlt data files besides cities (i.e. sporting events, railroads, etc.), so let me know if you have anything else of interest to the 245xlt scanning community!

Hopefully as a 245xlt owner, you will find some files of use to you for when you travel around the country, world, or attend a sporting event!

Please pass this link on to anyone else who might benefit or participate! Hopefully, some of you will know other 245xlt owners who can also contribute files!

Thanks,
Doug

Hi Doug... I am a rather silent member of the group here. Your question / comments / remarks hit some good points. What I would like to have is a database that was searchable by all the normal parameters... it agency freq etc... The main lists here are set up by the group owner and are updated often. But I don't know if anybody has or is willing to cut loose of a file.

You commented on the various trunking systems. I don't know if you have monitored this group long but there were some good notes recently about the services here. I am sure you will get some feedback on that.

Basically, the Harris CO Sheriff dept is the main operator of the Harris co radio system. Each county around here, as well as each city or other gov. agency can choose to sign an agreement to share in the operations. They can get access to other agencies on a radio by radio basis.

Steve -

Thanks for your comments.

>> What I would like to have is a database that was searchable by all the normal parameters... it agency freq etc...<<

I agree that would be nice to have and hopefully you all can work that out. At the same time, I want to be clear that I am looking for something MUCH simpler at this point!!! As a scanner user, hopefully we all already have our scanners programmed with a good set of frequencies! I am just looking for someone who uses a 245xlt scanner to donate this file to my database. Local people know what is an isn't important to include in a scanner.

Using the freeware backup program (link on my site), you can download these frequencies from a 245xlt scanner in less than a minute to create a small 9k sized file! Then the only other thing I would need would be some brief documentation of what frequencies and talk groups are programmed into this list.

Thanks,
Doug

Can anyone elaborate on what the traffic control activity I have been hearing on HPD Ch.8 (460.225 MHz) is all about? I can hear one guy telling others to "go green" on certain streets. I assume this has something to do with the extensive construction going on downtown.
Who has the inside scoop?

I have not been listening, but I agree that Downtown traffic control is using Ch. 8. I drove down there yesterday and saw an officer at almost every intersection.

No good deed goes unpunished.

I work downtown, and I sometimes here the traffic units on 8. During the afternoon rush hour, HPD has foot or bike units stationed at key intersections to get traffic out of the area. Some are directing traffic the old fashioned way, and some are controlling the signals from the control boxes on the corners. When they way go green on a particular street, I think they are having all of the lights win one particular direction green at the same time, in order to avoid gridlock.

1338. Costco Visit, plus

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-07-17 02:43:21 UTC
From: bpckty1@webtv.net
Topic: 1338 Message: 1338

Went to the new Costco store on the Katy Freeway this evening to see how they compare to Sam's Club and (scanning related) to determine what, if any, radio frequencies they use. Got no hits while in the store, but the stockers and managers had Motorola Spirit radios. After returning to the car and turning the car scanner on, I heard them on 154.570 MHz. No tone found.

Also, while driving around town, while working, I have been monitoring the MURS and itinerant frequencies on my Pro-92 to see how active the business band has become since the FCC has opened up new frequencies and band plans. Of course, 154.570 and 154.600 as well as 151.625 are active everywhere, but 151.880 has become a common frequency around town. And, the 456-460.000 and 466-470.000 bands are becoming more active, especially at the fast food restaurants. Plus, there are active LTR systems in the UHF 451-452.9875 and UHF-T 488-493.000 bands.

From other newsgroups, there seem to be some Motorola (commercial) UHF systems beginning operation elsewhere in the country. Has anyone heard of one beginning operation in the Houston area?

Sorry for the longish post, but maybe my musings will some answers to some of the questions I have been pondering lately.

When I first came to Houston in 1968 the lights were timed in such a way that if you were to drive 22 miles an hour you will be able to go complete through town if you stayed on the same street. There sometimes was an exception at Main street going East or West. At approximately 6:00 AM then all the lights going in one direction would all be the same. This would last till appx 9:00 AM and start again at 4:00 PM and last till 6:00 PM. If you drive fast you will make many lights. Before all the construction if you had to go one direction and then go another you could time yourself to go as far in one direction on green and then make the turn just before the light went red.

As far as I know the light pattern has not changed. Too bad all this was way before Lee P's tenure so he is unable to take any credit for it.

Sorry for this off topic post...It has been posted in several NG's and get lame(smart remarks) answers. I am hoping to try Voicestream, It's simple cheap and GSM is a new standard...Sprint is too 200 minutes peak 120 off-peak and roaming...Verizon seems ok but i can get more minutes from VS. Cingular has expensive rates and roaming is expensive. (also i can't get a signal in my home)Signal seems marginal in Pasadena...I just wish to stay out of the TDMA crap. I live right off of 225 and Scarborough...If anyone can report of Voicestream service in Pasadena, it would be appreciated.

Voice Stream (aka Aerial and now DT, Deutsche Telekom) Have had GSM in this country for several years. GSM is the Worldwide standard for Cell phones. They have good city coverage but once you are outside the major cities you will be deaply unsatisfied. The only true CDMA carriers in town are Prime Co. (Possible to change to TDMA since being purchased by Cingular), Sprint (Don't expect it to work in a Tropical Storm), and Verizon (expect to analog during part of conversation). Nextel is TDMA as is Cingular. The Time Division Scheme of Nextel is 6 to 1 and is 3 to 1 in Direct connect mode. They at least have put bi-directional amplifiers in a ton of buildings to increase their in-building coverage. But yet they are in discussions to switch to CDMA-X for all of their infrastructure (at least they say they are so that they can put the pressure on Motorola to come out with some user friendly phones and at a cheaper price). Nextel has been in discussions with Nokia, NEC, and Phillips. Nextel has also purchased all the Motorola owned 900 systems in town. They next phase of nextel will be 900 and 800 dual band phones. They phones will do 800 and 900 now but that has not been released outside the industrial market where Motorola is trying to push their Harmony product (http://www.motorola.com/LMPS/iDEN/press/release47.html.

My two-cents.

Regarding Sprint and the flood-
Sprint was kind enough to give a $10 credit on your phone bill (to all subscribers in their Houston district I believe) due to the outages. I didn't even call in and complain and still got it plus my phone wasn't even affected by Allison. (I'm in College Station)

Maybe it was a % of the bill. My bill usually runs around $80 or so. I have no contract with
Sprint. I've been with them a 2-3 years now. I got one of the older accts with first incoming free
minutes. I think now Sprint is a little tighter on their services (contracts, no incoming free
minutes, only one free option, etc)
I wonder what kind of coverage Voice Stream has up here? Being not in Houston sometimes the smaller
company's don't have the coverage in the smaller cities.
Verizon is not a great choice up here (my opinion) as for roaming is concerned. (We also just NOW
got digital up here for verizon) We are on the borderline of roaming territory. Travel just 5-6
miles north of Bryan and you are roaming, its always been like that-even when it was GTE Mobilenet.

Nextel just also came to town recently as well too
Anyway I know this doesn't concern 99% of you down there in Houston so food for thought.

Just checked my bill, it was a percentage of your bill (they gave me a 4 day credit at $15.76)). Since I pay about $125 a month I got a little more. Also I think they gave an extra 60 minutes to use over 3 months, which is worthless to me since I dont exceed my plan minutes. Although I dont see that on my bill, that must have been in a letter they mailed out about the flood, or something.

About the AOL & YahooGroups Mail Problem.

I got this msg from YahooGroups Status List that I am a Member on. This list is for any type of Problems with YahooGroups / eGroups / OneList ..... All the Tech Support and Operators are on this List.

As many of you know, recently AOL email users have been having trouble
receiving email from Yahoo! Groups. The problem should now be fixed.

What happened:
We recently changed the IP addresses on a number or our servers. AOL didn't recognize the new numbers and because of the volume of incoming email, they thought we might be spamming them, so they blocked the email coming from us. They updated their list of accepted IPs last night at 6:30 PM PST, so all should be fine.

More information here:

Hi folks,
This is jgohio (Joe Gay) operating with a temporary, borrowed internet "call sign" in the Houston area. I've been in town about 2 weeks (well, actually with significant time off for fishing) and HFD scanning has been good. HFD has been very busy. Today was the first day I ddin't hear at least a couple of working fires. Also some other interesting incidents like a high angle rescue yesterday- the second high angle I've heard since being here. HFD is making more use of the tac channels than they were when I was here in December. With the increased use, you can tell more about what's going on. We discussed this amonth or so ago and I can now confirm that A3 and A4 are used as tac channels at fires. Anyway,HFD is good listening now. Regards to all
Joe Gay

From: Myles Barkman
Topic: 1359 Message: 1359

Does anyone know what the different unit designations are for the HC Constables?
You'll hear them use unit numbers like "4-Tom-23".
The first number refers to the Precinct (1-8) but I don't know what the next letter is. There are other designations such as Charles, David, Paul...
Also, some units just have 4 numbers, like "8804". That is precinct 8 but what is the difference between that and the other type unit numbers?

Since I'm on the subject of the Constable's office, let me pose this question. I've never fully understood the difference in roles between the Sheriff's Office and the Constable's Office. Both are dispatched and respond to calls. Constables serve warrants and appear to patrol the highways and Beltway more so than SO. So what is the difference?

Harris County Unit Designators are roughly divided thusly:

1(000) Sheriff and Staff
2(000) Chief Deputy and Staff
3(000) Detective Bureau
4(000) Patrol Bureau
5(000) Miscellaneous Sheriff
6(000) Detention Bureau and Related
7(000) Technical Services Bureau
8(000) Constables
8100 Pct 1
8200 Pct 2
8300 Pct 3
8400 Pct 4
8500 Pct 5
8600 Pct 6
8700 Pct 7
8800 Pct 8
9(000) Other law enforcement agencies using Harris County, i.e.,
Fire Marshall, Railroad Police, etc., that do not fit
into any specific niche.

Constables are free to designate within their office how their unit
designators are used. For example, some departments use the full
8xxx designator, even with their own dispatcher. Others, such as Pct
4 and 5, eliminate the 8 while within their agency. An example is
with Pct 5. A full unit number will be 85L21 (Constable/Pct 5/
Patrol area or other assignment/Deputy.) As for what each Alpha
designator means, each Constable assigns them per their needs. But,
in general, a "Tom" unit is assigned to the Sam Houston Toll Road
and "Paul" units are assigned to the County parks. But, a "William"
unit in one Precinct may be Warrants, in another, it will be Writs,
or, some other designator. And, a "Mary" unit may mean a motorcycle
deputy, or a Mental Health deputy.

Non-Harris County agencies, such as Webster, West University Place, University of Houston, etc., using the Harris County System, designate their own unit numbers within their agency.

I know that at Pct 5 , the "T" stands for tollroad unit's and the "P" stands for Park units . and "S" stands for special ops units.the rest make up the area's of town they are stationed at ... I really don't know exactly what roles each agency plays.... I know when I first started driving an wrecker in the early 80's that constables mainly worked in the courts ... and that the city, county, and constables didn't exactly get along ...

> respond to calls. Constables serve warrants and appear to patrol the
> highways and Beltway more so than SO. So what is the difference?

The short reply is that Constables patrol within their respective precincts.

More detail:

Originally, Constables performed Civil duties (serving subpoenas, evictions, legal papers, etc.) Class-C criminal warrant service (traffic warrants, bad checks, etc.), and served as bailiffs for the Justice of the Peace courts.

Several years ago, since crime was on the rise, many subdivisions wanted extra police patrols, which the Sheriff, due to manpower restrictions that were imposed because of the Alberti lawsuit (most deputies at that time were assigned to the jail because of this) and other factors, was unable to fully meet. For example, the Sheriff was restricted to patrolling in unincorporated areas, but the Constables were not. So, the Sheriff was able to provide extra (contract) patrols in many areas of unincorporated Harris County, but restricted the contracts to 70% of the patrols in the contract and 30% subject to calls outside the contract since he has a large area to patrol and contract units were used to supplement the regular/non-contract patrols. The Constables guaranteed their deputies to be in the contract about 80% to 90% of the time since they did not have to provide primary patrols outside of their contracts. Plus, the Constables were not restricted to patrolling only unincorporated areas. Thus, the Constable patrols that are inside the Houston city limits.

The Commissioners Court assigned the Constables as primary patrol for the toll road system. But, if you listen closely, you will even occasionally hear the DPS writing tickets on the toll roads (the Beltway is a State Highway).

Constable deputies are peace officers, and as such, they file cases and charge individuals with crimes, which often results in warrants being issued. So, you will hear them performing warrant service.

The difference is, just like the Sheriff and Local Police Departments, they have concurrent jurisdiction in many areas of law enforcement, and unique jurisdiction in others.

Hope this helps.

Happy Scanning

From: CHARLES LANCASTER
Topic: 1359 Message: 1366

This may not be the correct answer, but it was a few years ago. The Sheriff is responcible for "Criminal Law Enforcement" in the county. The Constables are responcible for serving "Civil coart papers". This includes divorce papers, evictions, supeonas for civil coart (civil law suits), property suizures, etc. There is only one Sheriff per county and the number of Constables depends on the population of that county with a maximum of 8 (I think).

About 15 to 20 years ago a Constable here in Harris County started doing "Law Enforcement" duties. It created a big stir at the time. Appearently no one could find a legal reason in the state constitution to prevent them from doing it. He used the reasonning that deputy constables were in fact "full fledged police officers" and had the obligation by law to respond to criminal activities. Over the next few years this grew and grew until what you have today. The majority of the constable units are part of the "contract deputy system" in which the subdivision pays the county for the expenses of the additional units to patrol the neighborhood. My personal pet peave is that we pay taxes for the same services and if you live in an area that cannot afford a contract deputy, you are ignored on purpose and do not get regular patrols by either the sheriff or constable. We see a deputy in our neighborhood only when they are passing through to go somewhere else. We have been told specifically that if we want better service then we should contract with the county for what we are already paying taxes for. On the positive side, it does put more "POLICE" on the streets in the county. Every few years you still have some politician that challenges the constables legal authority to do "Criminal Law Enforcement".

The constables patrol the "toll roads" under contract (just like a subdivision) with the toll road authority. In other parts of the state, this is contracted to the DPS. Some of the other areas, such as parts of the 610 loop, 225 & 288 are patrolled by the constables purely as a "revenue generator" for the constable.

This is not much of an answer, but I hope it helps.

1367. Re: [HoustonScan] Harris County Constable Units

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-07-27 19:17:25 UTC
From: steven rucker
Topic: 1359 Message: 1367

TO ADD JUST A BIT MORE TO THE MIX....

Constables duties are specifically assigned by the Commissioners Court. In Harris CO the 8 constables are specifically assigned civil, writs and misdeameor warrants (usually traffic & hot checks). Other slots are assigned for duties such as baliffs, court lobbies, cps, juvenile offices, parks, maint camps (road & bridge)and so on.

The Harris County Toll Road Authority has contracts with several constables, Primarily Pct 1, 4, 5, 7 & 8 to patrol all main lanes of the toll road. These contracts do NOT necessarily exdend to the parkway or feeder roads. There are a lot misconceptions about the duties and responsibilities of the constables. The Contract deputy program is largly funded by the "Contracts" which are usually sub-divisions. Some are also contracted to other areas such as MUD districts or business districts. These contracts usually pay 70% or 80% of that officers salary & related expences such as car etc... The officer is expected to be in that contract at least the contracted percentage of time. But they can and do answer calls from outside the contract as needed.

Pct 4 has a contract with Cy-Fair ISD. These are known as 84 "Sam" xx units. Their toll road units are known as 84 "Tom" xx units.

Pct 5 "Sam" units are special operations, "Tom" are tollroad, "Adam" warrents, "Charles" civil "Nora" "Lincoln" "Victor" are all contract units. The Pct 5 talk groups are titled as Disp 1,2 & 3, warrants, writs/civil, tac 1-4. The only ones you will normally hear any traffic is Disp 1 and occasionally tac 2 if they are out on a long call.

Does anyone else experience email delays when sending from Hotmail or other email services?
The post I made about the bank robbery was actually sent Tuesday.
I sent another post yesterday about the fact that HISD's license is apparently non-existent. Possibly it expired. If anyone has access to a CDROM version of the FCC database and can see when WPGH773 expires, let me know. The system is still in use.

From: Myles Barkman
Topic: 1371 Message: 1371

Uh oh. What happened to HISD's trunked license?
Looks like it may have expired or something.
They are still operating on it so it's not gone and it doesn't look like
there is a new proposed system.
They just made my newest addition to the "shame on you" list.
Can someone look up WPGH773 on a CDROM frequency list and see what the
expiration date was?

1373. Re: Weird Antennas on Street light

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-08-01 12:43:16 UTC
From: mholland@ev1.net
Topic: 1107 Message: 1373

I have confirmation that those are indeed Ricochet Internet Radios provideing up to 178k speed. The have just filed for Chapter 11 though. The have gone up for auction. Here is some info that might shed some light on their network. (The info they do not like to provide).

Metricom, Inc. (the "Company") provides the following information regarding its high-speed Ricochet network and technology, including information regarding (i) average capital and operating costs per square mile of its high speed Ricochet network and (ii) the coverage area and bandwidth capacity of its network's wired access points and poletop radios. The information below is intended to provide supplemental information to that contained in the Company's Form 10-K/A for the year ended December 31, 2001, describing the Company's network and technology and its network deployment.

NETWORK CAPITAL AND OPERATING COSTS

The Company's capital costs for its high-speed network consist of the cost of acquisition and installation of its poletop radios, wired access points and network interface facilities. Depending upon population density, to construct its network, the Company typically installs seven poletop radios per square mile, one wired access point per ten square miles and one network interface facility per 600 square miles (typically one or two per market). Approximate average capital costs are as follows:

o $2,000 per poletop radio; o $180,000 per wired access point; and o $550,000 per network interface facility.

Based on the above averages, the average capital cost per square mile of the Company's high speed Ricochet network is approximately $33,000.

The operating costs of the Company's high-speed Ricochet network consists largely of rental and electrical fees for the poletop radios, wired access points and network interface facilities and communication costs (including costs for circuits and telecommunications services) for the Company's wired access points and network interface facilities. Electric and rental fees average approximately, $10 per month per poletop radio, $2,000 per month per wired access point and $10,000 per month per network interface facility. Communications costs average approximately $900 per month per wired access point and $12,000 per month per network interface facility. As a result, average operating costs are approximately $400 per month per square mile of the network (based on the average

distribution of network components set forth above). Based upon these average capital and operating costs and assuming that the Company receives average subscriber revenue of approximately $25 per month, the Company believes that it would require a minimum of 16 subscribers per square mile to cover its average operating costs, and, a minimum of 44 subscribers per square mile to cover its average operating and capital costs combined. There can be no assurance that these costs and other amounts will continue unchanged in the future or be applicable to other locations.

NETWORK COVERAGE AND CAPACITY

Density of coverage, bandwidth and the nature of subscriber use are all factors in determining subscriber capacity. Based on an average of seven poletop radios per square mile and one wired access point per ten square miles, each wired access point controls communications to approximately 70 poletop radios. The Company typically installs 12 to 32 Ethernet radios, or microcells, per wired access point.

Since each Ethernet radio provides the equivalent of 1.5 128 kbps user circuits, each wired access point has the bandwidth capacity to provide downstream data transmission rates of 2.3 to 6.1 mbps. The Company's subscriber model assumes (i) an eight-to-one ratio of paying subscribers to active subscribers, (ii) that approximately 12% of all subscribers are using the network at any one time, and (iii) that each subscriber downloads an average of 500 megabytes of data per month. Based upon this model and the average coverage stated above, each wired access point has the capacity to serve 100 to 250 active subscribers and 800 to 2000 paying subscribers. In addition, each poletop radio has the bandwidth capacity to provide an average 176 kbps downstream data transmission rate. Accordingly, based on the subscriber model above, each poletop radio has the capacity to serve five to eight active subscribers to the network. However, no assurance can be given that this information will continue unchanged in the future or be applicable to other locations.

It was you who put out that info. Figure you knew who it was already. Also the funny flat antenna's on homes are Sprint's network.

I have been looking around and have yet to find any company including AOL that is making money providing Internet service. Amazon, which AOL just did something with has yet to make a dime in it's five years. Guess I don't understand business anymore.

Constables are primarily paper servers and warrant executers. Their original function was to act as the constabulary for the justice system to process and serve legal papers on the citizens within a jurisdiction (ie- a precinct). However they also have police powers and are duly commissioned peace officers. They have to be this because the documents they serve have to be done by a legal arm of the justice system which has the power to serve and enforce the writs (all the different documents).

By having law enforcement powers and being part of a government entity, they also have the ability to apply for contract law enforcement bids. These include subdivision contracts, construction crew assistance on public thoroughfares, etc. Some of these contract bids are for independant organizations such as Harris County Toll Road Authority, County Parks, etc. The toll road is split up into different revenue and non-revenue generating sections. Each of these section is to be patrolled by an independently contracted law enforcement in ADDITION to the sheriff's dept. The sheriff's dept. has responsibility on a county wide basis for all aspects of law enforcement in unincorporated areas of the county including the county jail. They simply do not have enough employees and patrol units to be as effective as having one county agency obligated by charter (sheriff) and another county agency obligated by contract (usually a constable). This does not mean the sheriff's do not do contract work. To the contrary, they do bid for the contracts. These contracts follow the competitive bid laws and whomever is low bid and compliant with the requirements of the proposed contract wins it. It could be sheriffs, it could be somebody else. Remember, they all are law enforcement officials with powers of a peace officer. Give all of them all the respect and assistance you can offer. Most are real good people regardless of the department affiliation.

I always thought Ricochet was pretty cool idea.However they are kinda pricey I thought, $70 a
month for unlimited. Generally out of the range for most of us. Plus very limited coverage.
Read a while back that Sprint pcs was supposed to be bumping up their wireless internet speed to
around 144kbs.
Stil waiting...

1379. Pasadena Wrecker Assoc? and Nextel Radios?

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-08-02 17:03:07 UTC
From: Ron
Topic: 1379 Message: 1379

Pasadena Wrecker association has moved (apparently) to 800 mhz and I have been unsuccessful in locating them. Also, several of the wrecker companies have gone to Nextel radios and dispatch themselves. I'm an amateur at this hobby but would appreciate any help anyone can give me. I suspect the wrecker association may be on the PPD antenna band but there is no group ID listed, nor have I heard them during searches.

If you would email me your replies (kentexian@... without the z's) I will receive them faster but posts here will be ok too.

Thanks...
Ron Crawford

1382. Ricochet / Metricom

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-08-04 07:14:32 UTC
From: rustyc@ev1.net
Topic: 1382 Message: 1382

Highspeed wireless data company Metricom said on Thursday it will shut down its Ricochet wireless data network operations in all of its markets on Wednesday and liquidate the company.
Metricom, which filed for Chapter 11 bankruptcy protection in July, also said it would immediately cut 282 jobs.
The company said its board decided after yesterday's hearing in US Bankruptcy Court in San Jose to cease operation of the Ricochet network on August 8 and to conduct an orderly wind down of the company's business and to sell its assets.
The sale of the company's technology assets was expected to be conducted by auction on August 16.
Metricom's remaining employees will carry out an orderly shutdown of the network over the next three weeks. In addition, a small team will remain with the company through the end of October 2001 to oversee the liquidation process.
The company said it expected the Ricochet network to cease operation after Wednesday. Until that time, subscribers will have access to email accounts reliant on the Ricochet network, the company said.
The company also said it planned to work with its resellers and channel partners during the transition period prior to the network's shutdown.

1399. BC-200xl Battery Help.

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-08-15 18:52:09 UTC
From: G Sweatt
Topic: 1399 Message: 1399

Hello,

I have a BC-200xl and was performing a battery replacement yesterday and I noticed that one of the diodes "i think" was damaged. In the battery, there is a circuit board with resistor, diode, and capacitor I guess. The one in the middle called D601 was burned in half, perhaps from a reverse current and so I believe that is now why the radio is not working.

WHAT IS A D601? and can I buy a replacement at Rat Shack?

Thanks everyone in advance.

Greg Sweatt

It is quite a signal. I used to listen to KTRH with my UHF handheld on their 450.05 stl when I worked in a small town 100 miles west of Houston.

450.3125 is used by KRBE FM 104.1 in Houston. 870 watts ERP.

It was probably a tanker accident here is an excerpt from Channel 2's
web site...

"
Investigators told News2Houston that the tanker was carrying 9,000
gallons of gasoline when it collided with two cars, causing the big rig
to flip over and then explode

Houston firefighters said that they had a hard time battling the
inferno, because they couldn't develop a waterline.

"We finally got a supply from the Greenspoint (Mall) parking lot and had
to extend our hose onto the freeway to get pumpers on to the freeway to
fight the fire," firefighter B.T. Hall said.
"

The freeway is not supposed to be opened back up until late this
afternoon at the earliest.

My father and I use 740 MHz (kprc radio) dialed into the planes ADF. Neat thing is that the ADF
leads us almost to Houston Southwest airport. When you are at 9000' you can hear it almost anywhere in the state. Also I was in River Oaks Car Stereo
today and they have a new bc 780 for sale.

1406. Shell Oil

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-08-17 13:38:01 UTC
From: mholland@ev1.net
Topic: 1406 Message: 1406

Here is a write up on the Motorola Astro system in use at Shell in Deer Park. It is Motorola Propaganda

Technology is Only Part of the Picture for Shell Oil Company

For many companies that are investing in state-of-the-art communications, technology is only part of the picture. Energy industry companies, including oil and gas pipelines, gas distribution and electric utilities, as well as a variety of other organizations, are actively seeking the benefits of two-way communications technology for improving productivity, quality, control, and safety.

In 1995, Shell Oil Company's largest manufacturing complex in the U.S. installed one of the first digital communication systems in the state of Texas called ASTROTM by Motorola. This fully integrated petrochemical complex incorporates multiple facilities that process crude oil into gas, turbine fuel, lubricating oils, chemicals and resins. Base chemicals are transported by pipeline and tank trucks to chemical plants that produce plastic, rubber and epoxy. The by-products are used to manufacture an array of materials commonly used in our daily lives, including everything from toys to pharmaceuticals.

Balancing Productivity with Safety

Coordinating with all of the personnel who are working hard to keep the facilities operating at peak productivity levels while maintaining high safety standards is a complex task. Shell Oil Communications Supervisor Jim Crate says, "The three major considerations required for safe and efficient production are logistics, operations and maintenance."

Crate admits that Shell Oil is challenged daily with scheduling all of the activities that are needed to transport raw materials from ships, through pipelines, and via tank trucks to their docks. "Our operations process consists of coordinating with small work groups of 2-10 people who report to over 50 control rooms throughout the facility. The maintenance process involves almost 3,500 people who are also grouped into small teams. These individuals are responsible for the quality control of the manufacturing equipment as well as maintaining a clean and safe working environment. Without reliable communications, it would be a logistical nightmare trying to control our operations and maintenance resources."

Smooth Migration from Analog to Digital

Last year, Motorola provided systems integration experience to help Shell Oil, Deer Park with a smooth migration from its existing analog to its new ASTROTM digital system. Motorola's Customer Center for Systems Integration (CCSI) is where all components are integrated, cabled, connected and powered to customer specifications. "I can't say enough good things about systems integration in the factory!" says Crate. "Technicians can sometimes find solutions to problems in the factory that may have taken weeks to troubleshoot in the field," he exclaims.

"We've had pretty good luck with training from Motorola too," says Crate. "Our Motorola Corporate Account Manager, Eddie Greggs, is always available to answer our questions and get us the information we need when we need it. Typically, when we add any new equipment, we have a 1-2 day session with Motorola engineers for our technical people. Then it takes a few weeks for the non-technical folks in the field to get some hands-on familiarity with the equipment. Bottom line-- Motorola is willing to share information and has been able to meet our expectations for training on their equipment."

"In my opinion, since our personnel have been trained on the new system, it has significantly improved the productivity of our operations and will serve Shell Oil Company well into the future. Digital technology gives us clean, consistent audio quality throughout our coverage area and will help minimize the risks I associated with any of our confidential communications," adds Crate.

"Comparing the productivity of our operation with and without two-way communications is like day and night," says Crate. "I cannot overstate the productivity improvements of two-way radio. When you're trying to coordinate real-time activities with thousands of people over a 1,500-acre area, two-way radio isn't a luxury, it's a necessity. It's difficult to quantify productivity improvements with two-way, but I wouldn't hesitate to say our Motorola radios easily improve the productivity of our workforce anywhere from 200-600% depending upon the task."

"Our Motorola two-way radios contribute so much to productivity and safety that you'd have to fight tooth and nail to take them away from any of our workers," says Crate. "Our Motorola ASTROTM SABERTM portable radios allow control room personnel to send field people directly to the source of any problems. Two-way allows us to respond in real time, in seconds--rather than losing valuable minutes□which can be the difference between proactively fixing a leak or responding to a fire emergency or even worse□a serious explosion."

"Two-way radios also allow us to do more jobs with less people□ reducing operations maintenance time and money by as much as 50%. We've more than doubled the size of the plant in the last few years and only had to increase the size of the maintenance crew by 15%."

Creative Control of Resources

Crate explains, "Our security and safety personnel use two-way, RF frequencies to open and close relays on command. Decoders and encoders allow us to control up to 30 electronic door locks in about three seconds with the touch of a button. This can give workers who don't have passcards instantaneous access to shelters that are in place to protect them from exposure to hazardous or toxic chemicals in the event of an emergency situation."

"This increased control means peace of mind when it comes to the safety and well-being of our workers. Before this solution was developed, this critical process may have taken several minutes by computer and relied on paging, emergency alarms and announcements over a PA system." Similar remote monitoring technology can be used for less critical applications such as turning heaters, pumps, and backup equipment on and off.

Quality Isn't Just A Motto

Crate speaks candidly when it comes to Motorola quality. "Quality is more than just their motto...it's their business. Generally speaking," he adds, "over the years, the people at Motorola have met my high expectations. We have always been demanding with our special requirements, and while there is always room for improvement, I consider myself a very satisfied customer."

"It's important for me to work with companies that are not complacent □ companies that can provide us with leading edge technology," says Crate. "I am always interested in finding new and better ways to use two-way communications for improving productivity, quality, control, and safety. Motorola strikes me as a company that is constantly striving for technological excellence. They always seem to be manufacturing products faster, smaller, cheaper, lighter and more effectively."

"In my opinion, if Motorola stays diversified and adapts to our changing needs, they will continue to be technology leaders and meet Shell Oil Company's communication needs in the big picture," concludes Crate.

Try these. Sorry for the longish post, but this is a compilation of frequencies gathered from several sources over the years. The Austin fire information is from a fire in August of 1998. I think that it came from one of John Mayson's postings, but I have somehow deleted the headers, and the reference to which newsgroup...
(I hope the formatting/columns are legible)
TEXAS PARKS and WILDLIFE/GAME WARDENS

Tone Receive/Transmit User
none 151.265/151.265 *TX Parks & Wildlife Simplex
none 151.340/151.340 *TX Parks
151.355/151.355 *TX Parks & Wildlife Simplex
none 151.415/154.415 *TX Parks & Wildlife-Baytown
156.7 159.270/151.265 *TX Parks & Wildlife Game Warden-Houston or Baytown (has 800 MHz?)
173.8 159.270/151.265 *TX Parks & Wildlife Game Warden-Waller

They also have the intercity frequencies 154.950 and 155.370 programmed into their radios, plus the local sheriff departments. I counties that use 800MHz, they most likely have access to those systems. For Fort Bend County, monitor 155.925, the old Channel 1. It may still be active for those agencies that have not yet converted to the 800 MHz system.

1409. Re: Houston Fire Department Ax Channel Designations

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-08-19 16:53:07 UTC
From: joegay@frognet.net
Topic: 1201 Message: 1409

Hi Folks,
I've been back in Ohio for about a week after a month in Houston. Scanning was good as I communicated while in Houston. (So was fishing but that's not the topic of this forum.) I monitor fire departments mainly HFD since its the biggest game in town. I heard many interesting incidents. A couple of things that might be of interst. All comments below refer to HFD.
On several incidents companies were instructed to go to tac channel A8. The incidents, as I recall were combined fire EMS incidents. In a previous posting A8 was shown ot be 453.425. (See below) That is the main station dispatch frequency which seems like an odd choice for a tac channel. Unfortunately I didn't have the A8 Frequency info at the time I was monitoring so didn't go to 453.425 to check it out. Does anyone have further info on A8?
There were a couple of periods when I was monitoring when the dispatchers did not seem to be simelcasting fire dispatches on 453.423 (A1-also A8,see above), using A1 for EMS only, although most of the time fires were also dispatched on A1. If you don't want to miss any fire action , I'd again suggest monitoring A2, 453.500.
I did notice some simelcasting of fire dispatches on 154.16. I think the channel may be used for pagers (the incidents I heard included several EMS "710" pages. However, if the channel is routinely left on in the simecast mode it might be an alternative to the main dispatch frequencies (for someone who did not have UHF capability). Unfortunately I did not have the chance for any extended monitoring on this channel.
Several times on A2, I heard the dispatchers broadcast, "A microwave test" or "A backup microwave test for staion..." I had been under the impression that HFD'S microwave was no more. Does anyone know otherwise?

Happy scanning in Houston,
Joe Gay

To add my two cents worth.

These frequencies look like the ones that I read out of a HFD radio about 6 or 8 years ago. Yes, some of these frequencies are the same as HPD but the PL tone is different. Not sure what that means other than they programmed all the frequencies they could into their UHF radios from their exisiting licenses back then.

The 154.16 was a good alternative to monitoring if you didn't want to hear the status tones but you would miss some dispatches.

Since I read the radios they changed the dispatch frequency from 453.425 to 453.500 and the main ambulance talkback frequency several times.

Need someone to read the current radios so we know what they have programmed.

1411. HISD Trunk system license EXPIRED????

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-08-20 20:44:22 UTC
From: mholland@ev1.net
Topic: 1411 Message: 1411

I can not believe HISD let their 800 licenses expire. They have reapplied for 5 but that is barely enough to maintain a good channel to user ratio. Wish the news would get ahold of this one. It would cost HISD and tax payers 10's of Thousands if not hundreds of thousands if they want to recalim lost licenses and pay fines given by the FCC for operating illegally.

EDACS-Wide System WPHG773 has I-Call capability, near 59 & 610W (license expired 5/30/00)

866.1875c(1) 866.2625c(2) 866.2875c(3) 866.6625(4) 866.6875 (5) 866.9125(6)
867.1625(7) 867.1875(8) 867.4125(9) 867.6875(10)
868.1625(11) 868.1875(12) 868.4125(13) 868.4375(14) 868.700(15)

Their are also some high school kids bootlegging on a Galveston County EMS repeater. Listen to these guys for a good laugh:

110.9 155.055/154.115 xCOUNTY of Galveston Health Dist.-Animal Control/EMS Ch.2 (WYV259 expired)

1412. Re: [HoustonScan] HISD Trunk system license EXPIRED????

I think the channel 2 van is for the student that died during the practice game.
Just my thought.

1416. HISD Radios

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-08-21 10:43:15 UTC
From: msuggs@ix.netcom.com
Topic: 1416 Message: 1416

I work for cahnnel 2 and we did a story saying they're installing 2 ways on all the school buses, which surprised me since I just assumed all the buses had radios already. They radios are Ericksons if that's any help.

Marvin Suggs

1417. Re: [HoustonScan] HISD Radios

From: Edward Lentz
Topic: 1416 Message: 1417

HISD busses were on the UHF system for a while and if you ever checked into their license it was a non-business/non-government GMRS license. They were still using this system well past the grandfathered 5 years they had to relocate. The individual schools still have UHF radios for the officials in the school and as far as I know they are not patched into the trunk system.

It's not that unusual to find a local government to have expired license. Harris County failed to renew one of their VHF licenses before the trunk system and it was immediately applied for by one of the smaller towns to the south. Harris County did get the license back but they had to do some big time whinning.

1418. Some Talkgroups on Harris County not heard

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-08-22 21:14:40 UTC
From: Joshua Carroll
Topic: 1418 Message: 1418

I listen mostly to the Baytown repeater, since I am in Seabrook.
I have never heard anything from Alvin or Precint 2 Sherrif.

Is it because they are only on the downtown site or another site??

Methinks A8 is 460.6250/465.6250 (see A/D-8).
Note that A and D have the same plan, except that D is simplex.

This is what I have been hearing lately:

All HFD frequencies use PL 127.3

Repeater Channels

A01 453.4250 458.4250 KUQ798 Station Dispatch
A02 453.5000 458.5000 KUQ798 Apparatus Dispatch
A03 453.6750 458.6750 KUQ798 Assigned by Dispatch, Usually
Amb-Truck/MultiAlarm
A04 453.9500 458.9500 KUQ798 Assigned by Dispatch, Usually
Amb-Truck/Arson/MultiAlarm
A05 460.5750 465.5750 KUQ798 Supervisor/EMS/MultiAlarm alternate*
A06 462.9500 467.9500 KUQ798 Ambulance Dispatch**
A07 462.9750 467.9750 KUQ798 Medical Center**
A08 460.6250 465.6250 KUQ798 Supervisor/EMS/MultiAlarm alternate*

Med Channels (EMS/Hospital Comms)
Some have recently become repeated

B01 463.0000 468.0000
B02 463.0250 468.0250
B03 463.0500 468.0500
B04 463.0750 468.0750
B05 463.1000 468.1000
B06 463.1250 468.1250
B07 463.1500 468.1500

B08 463.1750 468.1750

Cannot confirm if this plan is still in effect

C01 460.5250 465.5250 Note: This is HPD B-3 w/PL123.0
C02 460.5500 465.5500 Note: This is HPD South Central
Patrol w/PL123.0
C03 460.5750 465.5750
C04 460.6250 465.6250
C05 460.5750
C06 460.5750
C07 460.5750
C08 460.5750

Direct Channels
(Probably used at multi-alarms for on-scene communications.
Someone please advise if this is correct.)

D01 453.4250 453.4250
D02 453.5000 453.5000
D03 453.6750 453.6750
D04 453.9500 453.9500
D05 460.5750 460.5750
D06 462.9500 462.9500
D07 462.9750 462.9750
D08 460.6250 460.6250

Notes:

* Used when there are several multi alarm incidents. Assigned by the
Dispatcher
** 462.9500 and 462.9750 are Medical Frequencies and have been heard (in
the past, but not lately) on Pearland and
other area EMS agencies and Life Flight.

Happy Scanning,

Ben

Ben'
Thanks for the reply and info. The D series channels are used as tac channels and seem to be used mostly used at high rise incidents. For multiple alarm fires other than high rises usually A3 or A4 are used as the tac channels. Incidentally, i have never heard the dispatcher refer to a C series channel. Has anyone else?
Thanks again,
Joe Gay

1423. Galveston County

Topic: 1423 Message: 1423

Is there anybody else that scans the Galveston county trunk?
I have some on my Scanner section on http://www.jcarroll.cjb.net
I haven't updated it in awhile, but I've been busy lately.

If anybody has any findings around the Northern Galveston county area,
please respond (to the group preferably)

Thanks in advance.

1424. Balloon Launch Saturday

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-08-25 05:46:37 UTC
From: Myles Barkman
Topic: 1424 Message: 1424

Here's something interesting for you to listen to.
Folks with scanners might listen in on 446.000 MHz for folks talking through a repeater from all parts of Southeast Texas and maybe even central and north Texas.
If you have a way to decode the packet on 440.950 MHz, you can see GPS data and tell where the balloon is and how high it is.

Here's a snip-it from the email about the launch with specifics about the payloads and frequencies used.

http://www.qsl.net/w5acm/b18.html

Here are some specs:

Live Color Camera Video on 1255 MHz FM ATV - 2 Watts
GPS data (GGA, RMC & GSA) on 440.950 MHz FM - 1200 baud - 100 mW
Crossband FM Audio Repeater - 147.435 MHz in - 446.000 MHz out - 375 mW
Radiation Detector - Interupted carrier on 28.322 MHz
Inside & Outside Temperature Data Recording Devices
35-mm Color Camera - Photo Interval = 200 seconds
Parachute Recovery for Main Payloads
Totex 1200 Balloon
RC Glider for Release @ 2000 Feet via Remote Cut-down
Main System Power = 15VDC @ 5 A/H Sulphur-Dioxide Lithium Batteries
Audio Beeper
ALL RF Systems use Vertical Polarization Antennas

We expect to arrive at the Wharton Municipal Airport between 8 and 9 AM on Saturday, August 25, 2001, to prep for the 10 AM launch. We will be on the Houston 146.70 Repeater till it drops out somewhere down Highway 59. The default direct frequency is 147.435 MHz (also the input to the BLT-18 cross-band repeater). We will have further updates on Comm Freqs from WD5IIU and KK5SC, as they become available.

1425. old TX DPS siren

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-08-26 23:50:59 UTC
From: Myles Barkman
Topic: 1425 Message: 1425

Breach of topic alert! If anyone knows a better place for me to find help on this, please let me know.

I have an old siren that used be belong to TX DPS. I'm trying to figure out the pin-out for the rear connectors as well as the front (PA mic).
I've figured out the power and speaker connections but I'm trying to figure out what the rest of them do (radio input, etc.).

This is a Siren Master SI-200-XL built by North American Signal Company. It is a blue metal box with Radio, PA, Wail, Yelp, Hi-Lo, and Riot (Yelp and Hi-Lo together). It also has a momentary button (manual) for wail.
I have no idea when it was built but I picked it up years ago in Manchaca for $2. Anyone know any history about these?

This is the way the connectors pins are aligned on the back:

```
| | -- -- 20 A -- -- --
| | -- -- fuse -- -- --

^
```

The left top is Power Ground and the bottom left is Power Positive.
The connectors above the ^ are speaker but this is as far as I can figure out.
There are smaller wires attached to all the other pins on the left connector.
The right connector I assume may be for the radio input.
Only four pins are used (left four) and the top left two are grounded together.

As far as the PA mic connector goes, it looks like this on the front:

```
4 o o 1
5 o O o 2
6 o o 3
```

The middle is where a screw is used to secure the microphone to the unit.
The connector has numbers marked on each pin as seen from the front.

If anyone could help me find a book for this, a source for connectors, or at least figure out the pin-outs, I'd appreciate it.
The coolest thing about this siren is that the wail dies down when you disengage it and listening to it without the speaker actually attached, it sounds like the old Andy Taylor type sirens. Don't know if it really sounds raspy with the speaker attached or if it is pure tone.

The other 'neat' feature is the "Riot" sound it makes. I've never heard this kind of sound before and I'd like to know if anyone else knows what

it's intent was.

Miles , I think north American was taken over by Federal signal you might try to see if they have archives.

1427. West I-10 FD

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-08-29 02:38:00 UTC
From: bpckty1@webtv.net
Topic: 1427 Message: 1427

There has been a reprogramming of the West I-10 Fire Department radios, per department announcements Sunday and Today. From the latest announcement, the primary dispatch channel is Channel 1. Previously, it was Channel 2, since there 855.9625MHz was the original UHF primary. So, it seems to have gone to frequency heaven. There may have been some additional talkgroups added; time will tell.

Happy Scanning

From: Wayne Gresser
Topic: 1428 Message: 1428

Does anyone have the complete channel/frequency plan for the Astros at Enron Field. This is what I have gathered so far:
D162 462.375/467.375 Ch 1 Ballpark control
D546 452.750/457.750 Ch ? Outside security
D025 451.425/456.425 Ch 10
D654 451.700/456.700 Ch ?
D205 452.250/457.250 Ch ?
D743 452.400/457.400 Ch 4 Information

I have heard Aramark on a number of frequencies, but they seem to be using separate radios...

Thanks,
Wayne G

1429. HCSO Channel 10 & 11

From: Myles Barkman
Topic: 1429 Message: 1429

Does anyone know what the deal is with HCSO Channel 10? I hear people on TG 9360 referring it to "10" and TG 14896 the same. I don't hear them at them same time, nor the same time of day. When looking at the status bits, the talkgroups are really 9363 and 14899. Wonder if this sheds some light on it.

Heard a unit tell someone to go to Channel 11. Anyone know what this is?

Someone mentioned some bootlegging going on 155.055 MHz. This was an old repeater used by Galveston County I believe.
From listening in, it is now used by members of the Friendswood VFD as "TAC" channel.
Don't know if this is official or "unofficial" use but that's who it is.

From: Myles Barkman
Topic: 1431 Message: 1431

Does anyone know what the motorcycle cops use to talk to parties in their escorts?
Specifically, I see oversize machinery cruising down the road with a motorcycle cop in the lead and they are talking over some handheld radios to each other. Do the motorcycle cops have radios that they loan to the drivers during the escort or does the truck company own them and loan it to the officer?
I don't think they are using FRS but I didn't try 464.500 or 464.550 MHz.

From: Joshua Carroll
Topic: 1435 Message: 1435

I've wondered about that too. I work on 146 in Seabrook (with scanner) and see these escorts all
the time.
I tried using the Motorcycle (escort) channel of the Pasadena trunk TG: 7056. Don't get anything.
Usually Im busy and don't have a chance to do some searching. Maybe someone else can shed light
on this.

Another topic, I was doing inspections on Bosone wreckers and they guy said they were going to be
installing new Motorola's because instead of being on rotation, they will be like Houston and
they will call out "Wrecker needed here". (I see more wrecks coming to my area) It's either
going to be on the Harris County Trunk (Baytown), Galveston County, or a New trunk system that
will be for Wreckers in the Southeast Harris/Northern Galveston County areas.
When I get more information, I will pass it down.

1436. Re: HCSO Channel 10 & 11

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-09-09 03:30:34 UTC
From: bpckty1@webtv.net
Topic: 1429 Message: 1436

On the STX radios, Channel 10 is the Information Channel.
On the new MTS radios, it is relabled Information.
Thus, the older deputies refer to the Information Channel as Channel 10, and some of the newer ones use the same terminology.

Central A Tac is now used as Central Patrol (Parks, Juvenile, etc.) and uses the Information/Channel 10 dispatcher. They are linked, usually.

Happy Scanning.

Just food for thought:

Most of the Two-way Communications systems and Microwave long haul systems were on top of the World Trade Center Towers. The Communications Center of New York City was taken down.

What would happen to Houston if The Wells Fargo Building and Chase Bank Tower were taken down? How would that impact the community (other than lives lost)? HPD is on One Shell (City PD would be OK) County has outlying sites other than the Downtown site) But most Private carrier based out of downtown would be down.

September 12, 2001

NY Attacks Knock Out Phone Service
[The Associated Press]
The Associated Press via NewsEdge Corporation : NEW YORK (AP) _ Many people reached for their phones after the attack on the World Trade Center towers to see if loved ones were safe, but many calls couldn't get through.

The toppled twin towers, which symbolized New York's financial prowess, also housed equipment and antennas that transmitted millions of calls each day.

The damage and an unprecedented volume of traffic overwhelmed an already strained communications system, cutting off much of a metropolis dependent like any modern city on telecommunications.

Callers from as far away as Maine and Atlanta tried for more than an hour before getting through.

``I dial 10 times and I'm lucky if two calls go through,'' said Chris Harreus, a union shop steward with the Communications Workers of America doing construction in the Newsweek building on 57th Street, more than four miles north of the World Trade Towers. ``Service is locking up on cell phones and pay phones.''

Knocked out were facilities of carriers including Verizon, although it said there was no major disruption of its network.

Sprint said the loss of leased landline equipment under one of the buildings was blocking 75,000 long distance calls.

``It's pandemonium,'' said Keisha Smithwick, who works at WestCom, a company that maintains dedicated phone lines for financial trading. She was sent home after the attack that destroyed the towers, where most of her company's clients were located.

Here's some stuff you might plug into your scanner for the time being:
140.425 (AM) Patrolling Fighter jets
142.200 (AM) Patrolling Fighter jets
364.200 (AM) NORAD
170.850 Marshals - Federal Court Security
163.4875 Air National Guard Security Ellington Field
157.075 Marine Safety Office
Harris County Trunked System - 8336 Harris County Emergency Management
City of Houston trunked system - 32944 Houston EOC
City of Houston Aviation trunked system - 04-067 linked to Houston EOC
talkgroup
453.700 & 453.900 Houston Airport Security Police
460.375 Houston PD at Ellington Field?
123.025 Houston PD "Fox" helicopters
409.625 US State Department
11175 kHz USAF (might keep an eye on this in case of a 'response')

Also check out http://www.grove-ent.com/attack/attack.html for other
possible freqs in use.
Chime in if you hear anything out of the ordinary/interesting/rare.

Forgot to mention these others:
165.1375 Ellington ANG maintenance (very busy Tuesday)
165.1875 Ellington ANG maintenance
261.800 Air National Guard Maintenance Ops

Folks with scanners that can search the UHF military air band have a good opportunity to find some interesting freqs right now.
364.200 MHz has been very busy today with aircraft patrolling overhead.
Look for other tactical freqs including air refueling which has been going on as well.

```
******************************
IPN ALL MEMBER and Non Members NOTICE
THURSDAY, SEPTEMBER 13, 2001
******************************
```

Dear IPN Members:

Firefighter and graphic designer David Kearney has designed a patch in memory of the firefighters lost in the WTC tragedy. These patches are being sold for $6.00 each, $5.00 of which will go directly to The New York Fire 9-11 Relief Fund set up by Firehouse.com and the IAFF (International Association of Firefighters). The remaining $1.00 of each patch will go to pay for the manufacture of the patch itself ($0.68 each) and postage ($0.34 each). IPN has agreed to cover any additional expenses, including all credit card processing charges. Absolutely no profit will be made on the sale of these patches!

We feel that this patch is a great way to contribute to the families of those lost heroes, and will serve as a lifetime memorial to commemorate the bravery and heroism displayed by the FDNY throughout this terrible tragedy.

The patches can be purchased at http://www.incidentpage.net (just click on the picture of the patch to go to the secure credit card processing server) for $6.00 each, and we would encourage those who can afford to buy more than one to do so. These patches are available to everyone, members and non-members alike, so please feel free to forward this message to anyone and everyone who may be able to help out.

If you need any further information, please feel free to contact us at support@....

Thank you!

Topic: 1452 Message: 1452

==>AMATEURS AMONG THE MISSING IN WORLD TRADE CENTER ATTACK

At least four Amateur Radio operators are among the many still missing in the aftermath of the September 11 attack on the World Trade Center in New York City. The attack also destroyed the major TV and radio transmitting site atop one of the twin towers.

The hams reported missing so far include:

* Steven A. "Steve" Jacobson, N2SJ, 53, of New York City, a transmitter engineer for WPIX TV, and an ARRL member.

* William V. "Bill" Steckman, WA2ACW, of W Hempstead, New York, a transmitter engineer for WNBC TV. He was well know in the NYC area and ran a number of repeaters from the World Trade Center, most notably the 434 MHz ATV repeater.

* Robert D. "Bob" Cirri Sr, KA2OTD, 39, an ARRL member from Nutley, New Jersey and the ARRL District Emergency Coordinator for Hudson County. A Port Authority police officer, Cirri was on the job helping to evacuate workers from the building when it collapsed.

* Michael G. Jacobs, AA1GO, 54, an ARRL member from Danbury, Connecticut. Jacobs worked at Fiduciary Trust Company International, which had offices in the World Trade Center.

The collapse of the World Trade Center brought down the master TV transmitting antenna that served all but one television station in New York City, as well as several radio stations and amateur repeaters. "The broadcast community is in absolute shock," said Hudson Division Vice Director Steve Mendelsohn, W2ML, who works for ABC News. "We all knew transmitter engineers, we all knew people who worked up in those towers near

those big television transmitters, and they're gone."

Mendelsohn said many viewers in the Greater New York City Area who are not
on cable can only see WCBS, channel 2, which maintains its transmitter site
on the Empire State Building. WCBS has offered assistance and space to help
the other stations get back on the air from its site, he said.

"None of the other transmitters exist anymore. They're in the rubble along
with the master antenna system, hundreds and hundreds of two-way radio
system antennas, and boxes and, of course, untold thousands of people who
perished."

There was cause for rejoicing in the case of another amateur who worked in
the World Trade Center. Rob Nall, WV0S, reports that his friend, Herman
Belderok, Jr, KB0EEB, managed to get out of the building just minutes before
the structure collapsed.

You might try these. The first one is for CART, the others are
INDYCAR racing related, but the media frequencies may be the same,
and some of the "misc. frequencies" will probably be used.

Topic: 1456 Message: 1456

DO NOT DELETE IF YOU HAVEN'T READ THIS. THIS IS A ONE TIME MAILING.
This program is for real. And it works no matter which country you live in (read the testimonials at the end of this message). Read on and you will be convinced. It would only take 2 minutes.

Dear Friends & Future Millionaire:

AS SEEN ON NATIONAL TV:
Making over half million dollars every 4 to 5 months from your home for an investment of only $25 U.S. Dollars expense one time

Step by Step Instructions are enclosed to insure your success with this program. Please take the 2 minutes it takes to read this letter.

THANK'S TO THE COMPUTER AGE AND THE INTERNET !
==========

BE A MILLIONAIRE LIKE OTHERS WITHIN A YEAR!!!

Before you say ''Bull'', please read the following. This is the letter you have been hearing about on the news lately. Due to the popularity of this letter on the Internet, a national weekly news program recently devoted an entire show to the investigation of this program described below, to see if it really can make people money. The show also investigated whether or not the program was legal.

Their findings proved once and for all that there are ''absolutely NO Laws prohibiting the participation in the program and if people can -follow the simple instructions, they are bound to make some mega bucks with only $25 out of pocket cost''. DUE TO THE RECENT INCREASE OF POPULARITY & RESPECT THIS PROGRAM HAS ATTAINED, IT IS CURRENTLY WORKING BETTER THAN EVER.

You are supplying information for a small fee- People will request from you copies of all reports many times over. This is a cash business better than a Mc ee D.!!!!!
Each report will give you the information you will need to succeed.

This is what one had to say: '' Thanks to this profitable opportunity. I was approached many times before but each time I passed on it. I am so glad I finally joined just to see what one could expect in return for the minimal effort and money required. To my astonishment, I received total $610,470.00 in 21 weeks, with money still coming in''. Pam Hedland, Fort Lee, New Jersey.

==========
Here is another testimonial: ''' this program has been around for a long time but I never believed in it. But one day when I received this again in the mail I decided to gamble my $25 on it. I followed the simple instructions and walaa ..... 3 weeks later the money started to come in. First month I only made $240.00 but the next 2 months after that I made a total of $290,000.00. So far, in the past 8 months by re-entering the program, I have made over $710,000.00 and I am playing it again. The key to success in this program is to follow the simple steps and NOT change anything.'' More testimonials later but first,

========== PRINT THIS NOW FOR YOUR FUTURE REFERENCE ==========

$$$

===
Within a few days you will receive, vie e-mail, each of the 5 reports from these 5 different individuals. Save them on your computer so they will be accessible for you to send to the 1,000's of people who will order them from you. Also make a floppy of these reports and keep it on your desk in case something happen to your computer.

===
IMPORTANT __ DO NOT alter the names of the people who are listed next to each report, or their sequence on the list, in any way other than what is instructed below in step '' 1 through 6 '' or you will lose out on majority of your profits. Once you understand the way this works, you will also see how it does not work if you change it. Remember, this method has been tested, and if you alter, it will NOT work !!! People have tried to put their friends/relatives names on all five thinking they could get all the money. But it does not work this way. Believe us, we all have tried to be greedy and then nothing happened. So Do Not try to change anything other than what is instructed. Because if you do, it will not work for you. Remember, honesty reaps the reward!!!

1.... After you have ordered all 5 reports, take this advertisement and REMOVE the name & address of the person in REPORT # 5. This person has made it through the cycle and is no doubt counting their fortune.

2.... Move the name & address in REPORT # 4 down TO REPORT # 5.

3.... Move the name & address in REPORT # 3 down TO REPORT # 4.

4.... Move the name & address in REPORT # 2 down TO REPORT # 3.

5.... Move the name & address in REPORT # 1 down TO REPORT # 2

6.... Insert YOUR name & address in the REPORT # 1 Position.

PLEASE MAKE SURE you copy every name & address ACCURATELY!
==========

**** Take this entire letter, with the modified list of names, and save it on your computer. DO NOT MAKE ANY OTHER CHANGES.

Save this on a disk as well just in case if you lose any data. To assist you with marketing your business on the internet, the 5 reports you purchase will provide you with invaluable marketing information which includes how to send bulk e-mails legally, where to find thousands of free classified ads and much more. There are 2 Primary methods to get this venture going:

METHOD # 1: BY SENDING BULK E-MAIL LEGALLY
==========

Let's say that you decide to start small, just to see how it goes, and we will assume You and those involved send out only 5,000 e-mails each. Let's also assume that the mailing receive only a 0.2% response (the response could be much better but lets just say it is only 0.2%. Also many people will send out hundreds of thousands e-mails instead of only 5,000 each). Continuing with this example, you send out only 5,000 e-mails.

With a 0.2% response, that is only 10 orders for report # 1. Those 10 people responded by sending out 5,000 e-mail each for a total of 50,000. Out of those 50,000 e-mails only 0.2% responded with orders.

That's=100 people responded and ordered Report # 2.

Those 100 people mail out 5,000 e-mails each for a total of 500,000 e-mails.
The 0.2% response to that is 1000 orders for Report # 3.

Those 1000 people send out 5,000 e-mails each for a total of 5 million e-mails sent out.
The 0.2% response to that is 10,000 orders for Report #4.

Those 10,000 people send out 5,000 e-mails each for a total of 50,000,000 (50 million) e-mails.
The 0.2% response to that is 100,000 orders for Report # 5
THAT'S 100,000 ORDERS TIMES $5 EACH=$500,000.00 (half million).

Your total income in this example is: 1..... $50 + 2..... $500 + 3.....$5,000 + 4..... $50,000 + 5..... $500,000 ..... Grand Total=$555,550.00

NUMBERS DO NOT LIE. GET A PENCIL & PAPER AND FIGURE OUT THE WORST POSSIBLE RESPONSES AND NO MATTER HOW YOU CALCULATE IT, YOU WILL STILL MAKE A LOT OF MONEY !

==========
REMEMBER FRIEND, THIS IS ASSUMING ONLY 10 PEOPLE
ORDERING OUT OF 5,000 YOU MAILED TO. Dare to think for
a moment what would happen if everyone or half or even
one 4th of those people mailed 100,000 e-mails each or
more? There are over 150 million people on the
Internet worldwide and counting. Believe me, many
people will do just that, and more!

METHOD # 2 : BY PLACING FREE ADS ON THE INTERNET
==========
Advertising on the net is very very inexpensive and
there are hundreds of FREE places to advertise.
Placing a lot of free ads on the Internet will easily
get a larger response. We strongly suggest you start
with Method # 1 and add METHOD # 2 as you go along.
For every $5 you receive, all you must
do is e-mail them the Report they ordered. That's it.
Always provide same day service on all orders.

This will guarantee that the e-mail they send out,
with your name and address on it, will be prompt
because they can not advertise until they receive the
report.

========== AVAILABLE
REPORTS==========

ORDER EACH REPORT BY ITS NUMBER & NAME ONLY. Notes:
Always send $5 cash (U.S. CURRENCY) for each Report.
Checks NOT accepted. Make sure the cash is concealed
by wrapping it in at least 2 sheets of paper. On one
of those sheets of paper, Write the NUMBER & the NAME
of the Report you are ordering, YOUR E-MAIL ADDRESS
and your name and postal address.

PLACE YOUR ORDER FOR THESE REPORTS NOW :
==========
REPORT # 1 : ''The Insider's Guide to Advertising for
Free on the Net''
Order Report # 1 from:

Teresita Santos
1-7 Row House Rawis
Don Bosco, Tondo Manila
Philippines 1012

REPORT # 2 : ''The Insider's Guide to Sending Bulk
e-mail on the Net''
Order Report # 2 from :

Bianca Elaine
c/o Joy Casanova
35 India St., Better Living Subd.
Paranaque City
Philippines 1711

REPORT # 3 : ''The Secret to Multilevel marketing on
the net''
Order Report # 3 from:

Kris H. Webber
Sankt Hansgade 24,3th.
Copenhagen 2200
Denmark

REPORT # 4 : ''How to become a millionaire utilizing
MLM & the Net''
Order Report # 4 from:

J Profit
P.O.Box 38333
Greensboro,NC 27438-8333
USA

REPORT # 5 : ''HOW TO SEND 1 MILLION E-MAILS FOR
FREE''
Order Report # 5 from:

Auralyn Joy
c/o Maximo L. Quijano
2262 Road 3
San Andres Bukid
Manila City
Philippines 1017

$$$$$$$$$ YOUR SUCCESS GUIDELINES $$$$$$$$$$$

Follow these guidelines to guarantee your success:

=== If you do not receive at least 10 orders for
Report #1 within 2 weeks, continue sending e-mails
until you do.

=== After you have received 10 orders, 2 to 3 weeks
after that you should receive 100 orders or more for
REPORT # 2. If you did not, continue advertising or
sending e-mails until you do.

=== Once you have received 100 or more orders for Report # 2, YOU CAN RELAX, because the system is already working for you, and the cash will continue to roll in ! THIS IS IMPORTANT TO REMEMBER: Every time your name is moved down on the list, you are placed in front of a different report.

You can KEEP TRACK of your PROGRESS by watching which report people are ordering from you. IF YOU WANT TO GENERATE MORE INCOME SEND ANOTHER BATCH OF E-MAILS AND START THE WHOLE PROCESS AGAIN. There is NO LIMIT to the income you can generate from this business !!!

==========

FOLLOWING IS A NOTE FROM THE ORIGINATOR OF THIS PROGRAM:
You have just received information that can give you financial freedom for the rest of your life, with NO RISK and JUST A LITTLE BIT OF EFFORT. You can make more money in the next few weeks and months than you have ever imagined.

Follow the program EXACTLY AS INSTRUCTED.
Do Not change it in anyway. It works exceedingly well as it is now. Remember to e-mail a copy of this exciting report after you have put your name and address in Report #1 and moved others to #2 .....# 5 as instructed above. One of the people you send this to may send out 100,000 or more e-mails and your name will be on every one of them. Remember though, the more you send out the more potential customers you will reach. So my friend, I have given you the ideas, information, materials and opportunity to become financially independent. IT IS UP TO YOU NOW!

========== MORE TESTIMONIALS==========

'' My name is Mitchell. My wife, Jody and I live in Chicago. I am an accountant with a major U.S. Corporation and I make pretty good money. When I received this program I grumbled to Jody about receiving ''junk mail''. I made fun of the whole thing, spouting my knowledge of the population and percentages involved. I ''knew'' it wouldn't work. Jody totally ignored my supposed intelligence and few days later she jumped in with both feet. I made merciless fun of her, and was ready to lay the old ''I told you so'' on her when the thing didn't work. Well, the laugh was on me! Within 3 weeks she had received 50 responses. Within the next 45 days she had received

total $ 147,200.00 ..... all cash! I was
shocked. I have joined Jody in her ''hobby''. Mitchell
Wolf M.D., Chicago, Illinois
==========
'' Not being the gambling type, it took me several
weeks to make up my mind to participate in this plan.
But conservative that I am, I decided that the initial
investment was so little that there was just no way
that I wouldn't get enough orders to at least get my
money back''. '' I was surprised when I found my
medium size post office box crammed with orders. I
made $319,210.00 in the first 12 weeks. The nice thing
about this deal is that it does not matter where
people live. There simply isn't a better investment
with a faster return and so big''. Dan Sondstrom,
Alberta, Canada
==========
'' I had received this program before. I deleted it,
but later I wondered if I should have given it a try.
Of course, I had no idea who to contact to get another
copy, so I had to wait until I was e-mailed again by
someone else.....11 months passed then it luckily
came again..... I did not delete this one! I made
more than $490,000 on my first try and all the money
came within 22 weeks''. Susan De Suza, New York, N.Y.
==========
'' It really is a great opportunity to make relatively
easy money with little cost to you. I followed the
simple instructions carefully and within 10 days the
money started to come in. My first month I made $
20,560.00 and by the end of third month my total cash
count was $ 362,840.00. Life is beautiful, Thanx to
internet''. Fred Dellaca, Westport, New Zealand
==========

ORDER YOUR REPORTS TODAY AND GET STARTED ON YOUR ROAD
TO FINANCIAL FREEDOM!

==========
If you have any questions of the legality of this
program, contact the Office of Associate Director for
Marketing Practices, Federal Trade Commission, Bureau
of Consumer Protection, Washington, D.C.

This list is about 2 yrs. old. Try "cart.com" for a updated list. They run very low power. Outside of downtown you can't hear them...

Quite possibly Shell Refinery 400 MHz Trunked System.
Lindsey Blanton is looking for someone to monitor and advise
on talkgroups, etc. Looks like you are in a great spot to be the
reporter.

1465. Spam attack

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-09-27 22:58:11 UTC
From: Myles Barkman
Topic: 1465 Message: 1465

Just wanted to comment on the unsolicited mass email list received last week.
I was out of town that weekend and when I got wind of it, thought "no problem", this guy is toast.
Well, I simply have to say that I don't even know how they were able to pull it off and I can't prevent it from happening again.
I have this list set up to email me when people subscribe and unsubscribe.
The address of that person never showed up as subscribing,
is not currently subscribed, and did not unsubscribe.
This list is set up to only allow members of this list to send emails on this list. This was done primarily to control this kind of problem.
Looks like it's not foolproof. The fools can still get in.

I'll be moving to Webster mid-October. Any new things I can scan over there
(besides Webster PD/FD)?
like maybe Walmart and Cinemark Webster.. etc.

I used to live in the Webster area, by El Dorado and Highway 3. You can scan a LOT of activity from Ellington Field. That's truer now since the 147th has been activated.

From: Myles Barkman
Topic: 1475 Message: 1475

Here's some freqs (in MHz) I can hear from my house related to the Grand Prix race in Houston today:

Media:
450.125 programming
450.525 commentary
450.875 commentary
455.225 cameras
455.725 sounds like Italian
455.875 cameras
455.9875 commentary
456.525 commentary (same as 455.9875)

Others:
451.925 hospitality? with DPL 156
461.475 concessions? with DPL 365
464.8875 penalty status with PL 167.9

HPD is using Channel 5, 460.425 Citywide for race operations.

I'm too far away to hear any race car radios or lots of on-site stuff.
Haven't heard any officials either.
Anyone else with any catches?

From: albertorea@webtv.net
Topic: 1476 Message: 1476

Anyone know why all the aircraft(That i can see) are being diverted. Usually they come down from the west side of the downtown area and go straight to hobby. Today and a few days ago i saw an aircraft come AROUND downtown turn east and go down like thru 45 and then turn south to Hobby. I have noticed a HEAVY line of aircaft traffic doing this. I also saw this a few days ago...Thurs..they were going above/in the vicinty of broadway right over milby high school to land. They usually come over thru my house in Pasadena and 225 but i havent heard or seen any planes. Does anyone know what is going on. I am *close* to Hobby but can't make out 124.600. They usually say "Runway taxi closed due to..." Any one have insite on this?

ok, learned later that it supposedly it wasn't a tornado but just high
winds (straight line?) that tore the roof off so I don't know.

1486. High Rise Fire

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-10-13 13:54:01 UTC
From: joegay@frognet.net
Topic: 1486 Message: 1486

A Houston firefighter died during seach and rescue operations at a high rise fire at San Felipe and Post Oak Ln this morning. Several other firefighters seriously injured. Radio system problems may have been a factor. The on scene Command Post could not hear the "Mayday" transmitted by the firefighters in trouble but units elsewhere did copy. Anticipate possible civilian deaths in this incident but none yet reported. Serious chronic under staffing of HFD certainly a factor in an incident like this. No reason to suspect any terrorism link in this situation. It is an unfortunately "normal" high rise fire. Working fires in high rises are always bad situations.
The Active Incidents page shows this to be a 5 alarm but my info is that it was 6 alarms or the equivalent thereof. The AI page went off line about an hour after the alarm but this would have no operational significance.
Lets remember the firefighters and their families and the cvilian victims in our prayers.

Joe Gay

1487. Interesting development

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-10-13 15:43:29 UTC
From: Myles Barkman
Topic: 1487 Message: 1487

Starting around 9:45am, a call was received by Metro PD (Transportation) about a suspicious male with either a towel, turban, or shirt on his head, dark skin complexion who boarded a Metro bus and was wiping some substance in a possible Clorox bottle onto the bus seats.
Metro PD responded with a couple of units to intercept the bus to investigate. The dispatcher advised that she was not able to talk to the bus for some reason but could hear the bus driver. The man got off the bus and got onto another bus. Both buses have been stopped and several agencies are involved with sorting out what is going on.
Several passengers on the bus are complaining of breathing difficulties or dizziness. Attempts by Metro PD to communicate with the man have not been very productive. He wasn't responding to verbal or hand motions to stand.
Metro PD on-scene says he has some tools on him and something with possibly Arabic writing. They said he was speaking French.
All this is going on at Old Spanish Trail and Almeda on the south side of Houston.
I think Metro has contacted the FBI to question the man.

Does anyone know what frequencies the Metro Buses are using these days? I thought they were using an LTR system on 860 MHz but I could hear nothing on those frequencies.

1488. 158.7300

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-10-16 02:31:17 UTC
From: bpckty1@webtv.net
Topic: 1488 Message: 1488

I've been hearing fire dispatches on 158.7300, pl 146.2.
The dispatches have been in the US 59 Montgomery County Line area, but the dispatches indicates that the fire department is not Montgomery County, since they say "near the Montgomery County Line" instead of "near the county line", as would be expected. FCC license check shows no licensee in the Harris/Montgomery, Liberty County/Montgomery County, Waller/Montgomery County, Walker/Montgomery County, Grimes/Montgomery County areas, but there is a returned request to the FCC from the Montgomery County Fire Chiefs Association that had 158.7300 assigned to it. And, pl 146.2 is the common tone for Montgomery County.

Anyone else been hearing these communications?

Happy Scanning...The quest continues...

I'm on the other side of Grimes county (Brazos) I'll take a listen and see, if no one already
knows. I know City of College Station Police used to have a simplex they would use on rare occasion that was 158.730. However that freq was a "giveback" a few years ago when they went
trunked. The common pl used up here is 141.3.
BTW-was it a repeater type comms or was it simplex you heard?

What your are hearing is in-fact the Montgomery County Fire Channel. The Fire Chiefs Assoc. is operating on an STA while there license is being worked. It is currently a Simulcast / Patch to Conroe Fire 1

The Chiefs Assoc. will eventually be leaving Conroe Fire 1 (154.190, 146.2) for there own dispatch channel.

Fresh from the FCC Database, I have not confirmed the new
frequencies, yet:

Metropolitan Transit Agency, Houston, TX

The Olde Original 800s:

861.0125
861.8375
862.0125
862.8375
863.0125
863.8375
864.0125
864.8375
865.0125
865.8375

New Stuff:

856.3875
857.3875
858.3875
859.3875
860.3875

Thanx,

That's probably what I've been hearing. It is amazingly strong in southwest/west Harris County. I had thought the dispatches may have been from somewhere near Victoria until the Montgomery County references began.

Date: 2001-10-16 21:13:39 UTC
From: bpckty1@webtv.net
Topic: 1494 Message: 1494

Talkgroup 10992 (Countywide Fire Wide) seems to be an interesting one
to listen to for "suspicious bags with white powder" calls.
(Possibly Tide, Spic-n-Span, or Cheer? Hopefully so.)
The most recent call was benign, but it may be a good TG to have
programmed, just in case.

1495. Hazmat and FD comments

Topic: 1495 Message: 1495

Just talked to someone in Houston who told me the ''white Powder in envelope" incidents are coming in fast and furious. Said there had been about a dozen in the last hour. Some of these were probably through the "Harris County" fire dispatch (Aldine FD, WEstfield etc.) and "Comm Center" since he monitors those and I only found 3 or 4 on the HFD AI page. An HFD hazmat unit went in service and the dispatcher said, "Good, I've got another run for you." hazmat answered, "you'll have to give it to someone else. We're not only out of supplies, we're out of fuel and patience too." Bare in mind these guys have apparently been going at it non-stop since since 6:30 this morning.
Some radio notes. Sometime this past summer I made mention of HFD's defunct microwave channels for which the licenses have expired. I am now told they are still using some of the microwave channels sans Lisc. Microwave is used for station dispatching. Also, rumor has it that HFD is going ot use an additional dispatch channel, probably switching over one of the tac channels to dispatch. That would put them in a bind by leaving only one fire tac channel. Therefore, they are going to try to obtain some unused public works UHF channels for FD. More on this as I learn about it.

Joe

That explains the activity on 460.575 this morning.

Add Harris County Fire Marshall 2, 16656, for an occasional update to the number of suspicious item calls by the respective county fire departments. Many have been busy.

1498. Request for help for a Newbie

From: rfdillon@hal-pc.org
Topic: 1498 Message: 1498

Folks, yesterday I purchased a Bearcat 245XLT, and already am confused with talkgroups, trunking terminology, etc., am currently studying this technology and learning much from a variety of Internet resources.
I was wondering if anyone had a Bearcat 245XLT who would be able to send me some sort of file that I could upload to my unit when it arrives, that would allow me to start scanning while I come up to speed on programming the various banks and frequencies?
I live in Northwest Houston and would be interested in the frequencies for Harris County, Jersey Village, HPD, and other agencies around the Houston TX area.
Any assistance is GREATLY appreciated, TIA, and please reply to rfdillon@.... Thanks again!

To: rfdillon@...,

In regards to your question concerning frequencies for Jersey Village. I do not know which specific frequencies you will need for this area. But.... Have you visited Myles Barkman's site which is at the address listed at the bottom of the e-group emails. The address is www.clarc.org/~kg5ai/freqs/freqs.html . He also has a web site called "The Frequency Zone". This site has a lot of interesting and informative links. I am certain you will find the Jersey Village Frequencies there.
You might take a look at some of the Precinct 1,4 &5 Frequencies for the Harris County Constables. I think the railroad tracks (along 290) are the dividing boundary line for Precints 4&5. You may want to listen to both. I think Precint 1 ends somewhere near Pinemont (and follows White Oak Bayou to the Northwest). This puts them very close to you, so you may want to consider monitoring their channels too.
I think some of the frequencies you will want, will be broadcasted from the Tomball Site. I am not up to date on trunked systems but I think the Downtown system will carry all of the Harris County frequencies. Possibly Jersey Village as well. That is, assumming they are using the trunked system.
I have heard traffic from the Beltway/West Road area and Jones Road/1960/North Eldridge area on the Tomball Site. I think I was hearing the Harris County Constables or perhaps Harris County Sherrif Dept. I do not know if Jersey Village uses these frequencies but thought you might like to know this.

Kindest Regards,

GWJJ

I am not certain if the files are listed in a format which can be downloaded into a receiver, but it's the best listing of frequencies within our area. (Thank you Myles).

Kindest Regards,

GWJJ

1504. any airshow freq info?

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-10-19 03:57:26 UTC
From: Myles Barkman
Topic: 1504 Message: 1504

Wondering if anyone in the know might have some preliminary airshow frequency information.
"Airboss" has been on 125.300 MHz in the past.
Understandably, there will be extra security at the airshow now. I hear that you'll virtually have to be naked to get inside. Well, maybe not that strict but no coolers anyway. I wouldn't be strapping on your sidearm, boxcutter, Swiss Army knife, pepper spray, or even safety pins on your baby's diapers.
Who knows what they'll do about people with scanners.
If anyone knows the details of what is allowed and what not, please pass it along here.
I'm planning on going Sunday.

KB5YTA

1507. WOH Airshow

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-10-20 00:45:47 UTC
From: Myles Barkman
Topic: 1507 Message: 1507

Well, that's half the battle.
Thanks for the airboss freqs. I think I know what the hams are using anyway.
So, here's some freqs that you might want to program for the airshow:

119.600 Airboss primary
124.500 Airboss secondary
126.050 Ellington Field Tower
253.500 Ellington Field Tower UHF Military
121.600 Ellington Field Ground Control
275.800 Ellington Field Ground Control UHF Military
261.800 TX Air NG Fighter Jets
134.450 Houston Approach/Departure Class B airspace around Ellington/Hobby
284.000 Houston Approach/Departure Class B airspace around Ellington/Hobby UHF Military
various freqs from 122.700-123.575 MHz for possible other aircraft/intercoms
freqs from 138-144 MHz for military jet air-air coordination and possibly some ground comms
freqs from 225-400 MHz for any military comms (difficult to search because of it's size)
It is best to just take the antenna off when searching for new freqs so you know they are there at the airshow and you won't get overload from any close-in transmitters

As far as Security and Ops on the ground:
453.900 HPD Airport Police
460.225 HPD Ch.8 car-car
460.025 HPD Ch.3 Southeast Patrol
163.4875 TX Air NG Security
173.5875 Ellington Field Fire/Crash
165.1375 Jet Maintenance
165.1875 Jet Maintenance
Military has used FRS in past for March of Dimes on field.
Check City of Houston Aviation Department EDACS trunk system at http://www.clarc.org/~kg5ai/freqs/aviation.html, especially talkgroup 04-081 which is used at Ellington.
Could be Harris County Deputies and Constables also and you might check out the NPSPAC freqs 866.0125, 866.5125, 867.0125, 867.5125, 868.0125

Civil air patrol could be running around using 148.150, 148.125 or 148.1375 MHz simplex or possibly others.

Who knows, maybe DPS will be out there so check out 154.950, 155.445, or 155.460 MHz for simplex.

Check business band freqs for other stuff like concessions, hospitality, etc.

Of course, with any large public event, you will have lots of FRS traffic.

Let me see if I can get a few last minute folks out to the Clear Lake Amateur Radio Club Hamfest tomorrow for those folks not going to the airshow, the Pasadena Rodeo, or the Renaissance Festival.
It starts at 9:30am and runs until 5pm. Entry is $3 per person and raffle tickets for the prizes are $1. You get price breaks for buying more tickets.
It is being held at the Bay Area Community Center in Clear Lake Park at 5022 Nasa Rd 1. This is on the North side of Nasa Rd 1 just east of Nasa and West of Kirby.
There is construction netting at the entrance of the park. Just come through the entrance and go to the back of the park where the large building with the blue roof is.
There will be a search dog demo I believe, ham radio satellite demo, a couple of transmitter (fox) hunts, catered BBQ, an APRS demo, and door prizes.
To see more info about this event, check out the pages at http://www.clarc.org/hamfest.htm.
Talk-in will be on the CLARC repeater 442.750 MHz (has transmit power problems) and the JSC ARC repeater 146.640 MHz.
I'll be helping with set-up in the morning and with the fox hunt around noon.
Come on out and have some fun!

Jerald,
Yep. The Joe Gay that you know. Good to hear from you. It was Chuck who told me about the hazmat traffic I referred to in my previous message. About 453.450-the book/frequency guide MONITOR AMERICA lists that as HFD channel A5. Seems like I heard some traffic on it when I was in Houston in July. Neither Myles Barkman's list or HFD frequencies provided on this page by Steve Casko in June listed it. (Myles is the webmaster of this site and has the best Housotn area frequency list around-see below) I'm guessing that HFD may have been using it even though it was licensed to PW. Anybody out there got easy access to the FCC database to see who the channel is assigned to? Also have you heard any dispatching on A3 or A4-it was one of those channels they were going to start using for dispatch.
Take care,
Joe Gay

1515. WOH Airshow

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-10-21 05:01:25 UTC
From: Myles Barkman
Topic: 1507 Message: 1515

In addition to frequencies I posted previously for the Wings Over Houston Airshow, here are a couple more for you (and I) Sunday people:
Airboss IS on 119.600 MHz this year. (same as last year)
HPD is using 460.225 MHz at the field
Ellington Field Air National Guard Base Security uses 163.4875 MHz AND this is the second time I've heard 163.000 MHz in use. Not sure what it is used for but it is rarely used.
464.500 MHz was used by some folks
FRS was used by spectators as well as some coordinating folks
Might want to plug in 163.5375 MHz which is Flight Line Ops folks. Ground Control simulcasts on this as well (you just don't hear the planes).
There are folks using the Brown and Root loaner radios as well. I don't happen to have a hand-held scanner that can track EDACS so I'm going to program the input freqs so I only hear the folks on-site anyway. These are: 899.2375, 899.250, 899.8875, 899.900, 899.9125, 899.925, 899.9375. 899.950, 899.9625, 899.975, 899.9875
Harris County Pct 8 Constables are out there as well, at least directing traffic on Hwy 3. Don't know what they were using for Ops out there.
Check the NPSPAC channels.
Also, not sure but 154.950 MHz may have been used out there.

BTW, I did watch some of the aerial display from around 3 to 4pm just south of Ellington.
At some point, Bush had an incident where a T-47(?) from Keesler doing touch-and-gos at Hooks had a problem with it's landing gear and wound up landing at Bush (sans gear). They called it an Alert III after it touched town, hosed the plane down with no injuries. No fire or anything like that.
It was interesting that with all the old AC flying around at Ellington and the pyrotechnics, no incidents occurred at the airshow, except maybe some AC or vehicles getting stuck in the mud. I also heard that there was a grass fire at Ellington Friday.
Did anyone else hear about the jet or see something on the news?
Ops were on the Aviation trunk on group 02-061.

It made the local news just as you described. Problem with right main gear.
Not sure why it diverted to Bush - you'd think Hooks would have the
same emergency capability given the volume of traffic there.

Howdy All,

The aircraft in question was a T-37 that had a problem with its landing gear. This aircraft is
used for primary jet training. It looks as if the pilot elected to either leave the gear up for
landing or it collapsed on touchdown. It land on runway 15L at Bush IAH.

IAH does by far have greater ARFF (Airport Rescue & Firefighting) capabilities than Hooks. Plus
with a bigger airport, you will also likely have someone who can remove the aircraft from the
runway ASAP.

Hope that helps.

From: REGoldy
Topic: 1518 Message: 1518

Friday night I heard an extensive period of what sounded like digital burst
transmissions on the Hobby PD channel. Interspersed were brief open msgs
like "tell me which radio is being keyed", and "which one was that?".
I also have been hearing what sounds like brief data bursts at beginning of
open transmissions on same channel. Is it possible that airport PD's are going
to radios similar to FD, that send unit ID data each time they transmit,
or is this a more sophisticated system actually capable of digital encryption?

Jerald,
Yep. The Joe Gay that you know. Good to hear from you. It was Chuck who told me about the hazmat traffic I referred to in my previous message. About 453.450-the book/frequency guide MONITOR AMERICA lists that as HFD channel A5. Seems like I heard some traffic on it when I was in Houston in July. Neither Myles Barkman's list or HFD frequencies provided on this page by Steve Casko in June listed it. (Myles is the webmaster of this site and has the best Housotn area frequency list around-see below) I'm guessing that HFD may have been using it even though it was licensed to PW. Anybody out there got easy access to the FCC database to see who the channel is assigned to? Also have you heard any dispatching on A3 or A4-it was one of those channels they were going to start using for dispatch.
Take care,
Joe Gay

Directional antennas.

The horizontal and vertical planes of a cell site take aim so the areas of coverage do not overlap into the next area using the same frequencies.

As the air plane reaches 1500 to 2000 feet above ground , the air craft passes out of the horizontal directional beam of the cell site transmit and receive antennas

Here is a possibility. IF you were able to use your cell phone in flight, do you think anyone would be stupid enough to pay $3.00 per minute to use one of those dumb airphones? Should we be following the money?

Mike:

Cellular phones as we know them have not been around for 20 years. The so-called "advanced mobile phone service" or AMPS (commonly referred to as just "analog") is the first cellular standard which has been in operation since 1983 when the 1st AMPS system went live in Chicago, and in most major metropolitan areas shortly thereafter The concept has existed since the 1940s, but the FCC never allowed a usable amount of spectrum for the project until the late 60s. Nobody in industry really pursued developing the technology until the 1970s. AT&T Bell Labs deployed a prototype cellular system in the late 70s in Chicago, but a national standard (AMPS) was not deployed until 1983.

As for why you can't use a cell phone on an airplane:
#1 - it's an FAA violation to do so (naturally in an emergency though, the rules get tossed out the window). And I suppose it is possible for the phones to interfere w/ navigation or other comms on board.. that is probably the thinking behind the FAA requirement not to use them.
#2 - Cellular phone systems are designed for terrestrial based coverage. The antenna radiation patterns are not conducive to aerial coverage. Additionally, if one is able to set a call up it's bound to stay up only for a few seconds, the possibility of being able to make a handoff is almost impossible. I think it is an absolute wonder that someone could bring up a cellular call from an airborne craft due to the shielding of the fuselage (inherent attenuation of the signal), the pattern of the cell site antennas, multipath, & doppler shift. That's not to say it's not possible, but I sure wouldn't count on being able to do it.

Whether or not the media accurately reported the use of cell phones during the 9/11 doomed flights is anybody's guess. I know for sure one of the calls was from the on-board "air phone" found in the backs of seats. One report from the media was that a "cell phone" call was made from the airplane bathroom just prior to the plane hitting the Pentagon, I assign this claim more credibility because the plane was undoubtedly not very high in the air at that time (as much as I hate to think about it).

Regards,

Mike

FCC, not FAA. It is however an FAA violation for a passenger to
endanger the safety of others. If a passenger is asked by a flight
crew member to turn something off and they refuse - they can go
to jail, receive a fine, etc. This includes just about any potential
source for interference - walkmans, PDAs, laptop computers,
and gameboys.

Another issue with operating a cell phone at altitude is that the individual
cell cites reuse the same spectrum. One phone/user can potentially tie
up the same channel for multiple sites. It is also harder for the cell sites
to "vote" as to which should handle the call since the cell site controllers
may not be designed to cope with affiliations and negotiating hand-offs
to other non-adjacent cells. It is probably easier for an airborne cell
phone
to work in rural areas where cell sites are more spread out covering larger
areas. Dense urban areas would most certainly be problematic.

Rick and All,
Well, in a not to technical description, it is explained easiest by saying that the capabilities at IAH are "Better" only because they have ARFF on field and standing by for an eventuallity. This is governed by FAR (Federal Aviation Regulation) Part 139 that deals with certifying commercial air carrier airports. DWH is to my knowledge not a Part 139 certified airport and as such has no government mandated response capability. This is by no means a put down of the various VFD agencies in the Hooks area. HFD just does this type of thing more often.
On a side note, it is very interesting that they would choose runway 15L at IAH. That is normally the main departure runway for all aircraft that are not going north out of IAH. I am surprised that they did not choose another divert airport such as HOB or ELD assuming the airshow had finished. However, maybe the gas situation said to get that aircraft on the ground.
Gee, I knew I would write to much.

Take Care,
Brian W.

You're right! However it IS an FAA violation if you use the phone
without permission from the crew (while on the ground), but FCC
violation to use it while in the air.

I get pages alerting of incidents at the airport from IPN like the one described in this thread, but how does one monitor the action? Is it on HFD freqs. or on the IAH EDACS freqs. or what? I would really like to know so I can monitor.

Also this morning(Monday)there was another page about a plane crash at IAH, but I could not locate any action on the freqs. I thought would be active.

In theory anyway. I believe they were invented in 1979, but commercial systems didn't start until 1983 or so.

--- In HoustonScan@y..., Rick Parrish <rfmobile@s...> wrote:
> IPN reporting a plane crash at IAH this morning.

My info is that there was smoke in the cabin of a plane on the runway. It may have been dispatched as an Alert so IPN could have interpreted it as a crash. Nothing really major as it turned out. My informant said it got a heavy response, "Sounded like they sent 2 of everything in the fire department."
The message which followed asked how to monitor such activity. There may be some activity on aviation bands (which I never monitor) but I would guess HFD would be the best bet. I would check out the dispatch freq along with tac channels A3 and A4. Most of the alerts turn out ot be minor (thankfully) so if there is any lag in IPN paging it out, it may be all over by the time you get on fire bands to monitor.

Topic: 1538 Message: 1538

Folks, I just got my BC245XLT last night, and have enjoyed trying to get it going. I downloaded frequencies from Uniden, and noticed that often times when the fire dept. dispatches a call, the dispatcher will tell the truck "Go to 6" or some other number. What does that mean, and is there a way for me to follow the conversation? Thanks so much in advance and please reply to rfdillon@..., and if anyone has any suggestions on learning how to use this scanner or perhaps interesting frequencies in the Houston area, I would appreciate any help you can give. Thanks again, Richard Dillon

See message 1419 in the Archives

It seems, lately, that A5, normally a tac/ems-supervisor channel, is
also being used occasionally as a Dispatch Channel.

1542. Wings Over Houston, Sunday, 10-21-01

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-10-23 21:11:00 UTC
From: bpckty1@webtv.net
Topic: 1542 Message: 1542

These are my captures from Sunday's Airshow:

Air Show Frequencies Oct 21, 2001

126.0500 Tower
253.5000 Tower
275.8000 Ground
121.6000 Ground
120.0000 unknown, possibly a transient aircraft
123.0000 unknown, possibly a transient aircraft
119.6000 Air Boss 2001
123.4750 Discrete 2001
163.0000 Concessions, listed in some lists as
Weapon Security F3
228.8000 unknown, some key-ups
460.2250 HPD 8 Car-Car, very active
145.5000 Ham Net Net Control
145.7000 Ham Net Fuel Trucks
154.5700 Concessions PL 100.0
151.9550 Family Use
464.5000 Primary Concessions PL 91.5
464.5500 various users
469.5000 various users
469.5500 CAP CP PL 131.8
467.7625 Concessions D074
467.8375 Unk, parking related?
462.7125 FRS 07 Unk use
467.6875 FRS 13 CAP Ramp Control*
467.9250 Film Crew

Note: They were very jealous of this channel, and would challenge any non- CAP users and strongly advise them to go to another channel. One vendor told me that the CAP approached him and told him that the CAP was using Channel 13 and that he must use another channel.

No Brown and Root communications related to the Air Show were heard.

No 800 MHz radios, other than cell phones were observed. Most radios were VHF (AM, FM, Amateur) and UHF (Business and FRS).

Happy Scanning

> RailNet 802, out

The reason why cell phones, as well as other devices that emit RF are not allowed to be in use on airplanes, especially while in flight, with a few exceptions, relates back to a mid-air collision over New York City that was traced to a transistor radio being used by a youth on one of the planes. This small radio caused the avionics and navigation instruments to give false readings that led to the collision. I forget which plane had the radio, and the below links do not provide the report.

Links for Air Disasters:

http://dnausers.d-n-a.net/dnetGOjg/Disasters.htm
http://www.seniorsite.com/Articles/airdisaster2.htm

16/12/1960 New York, USA DC-8-11 United Airlines Collision 134
16/12/1960 New York, USA Lockheed Constellation 1049 TWA Collision 134
Thus, the airlines and the FCC have been on the very cautious side ever since.

Hope this helps...
(and, I hope the formatting works when submitted.)

1546. Question about entering Harris County trunking freqs into a BC245XLT

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-10-24 01:51:40 UTC
From: rfdillon@hal-pc.org
Topic: 1546 Message: 1546

Folks, I have enjoyed listening to the default frequencies which I downloaded last night via Uniden's BBS, but now I would like to experiment with entering Harris County's trunking system into several banks. Does anyone have any experience, or can you offer advice as to how best to do this?

I backed up the frequencies from Uniden to my PC using a backup utility, and I have a list of frequencies for the Harris County system. What next? Any help is GREATLY appreciated, TIA and please reply to rfdillon@.... Thanks!

From: David P.--KD5LOE
Topic: 1546 Message: 1548

The Harris County system is BIG. What I did in my 245 is this: I entered the downtown freqs into one bank. I then set up talkgroup ID scan lists. I had the local Sherrif Dept dispatch and tac groups in one list, Constables in another list ect...
You can get the freqs and talkgroups for Harris County on KG5AI's site, the links are below. His listings are much more organized than Unidens jibberish.

From Posting Number 1419 of the Archives:
This is what I have been hearing lately:

All HFD frequencies use PL 127.3

Repeater Channels

A01 453.4250 458.4250 KUQ798 Station Dispatch
A02 453.5000 458.5000 KUQ798 Apparatus Dispatch
A03 453.6750 458.6750 KUQ798 Assigned by Dispatch, Usually
Amb-Truck/MultiAlarm
A04 453.9500 458.9500 KUQ798 Assigned by Dispatch, Usually
Amb-Truck/Arson/MultiAlarm
>>>>>>>>>>>>>>>>>This is Channel A5:
A05 460.5750 465.5750 KUQ798 Supervisor/EMS/MultiAlarm
alternate*
A06 462.9500 467.9500 KUQ798 Ambulance Dispatch**
A07 462.9750 467.9750 KUQ798 Medical Center**
A08 460.6250 465.6250 KUQ798 Supervisor/EMS/MultiAlarm
alternate*

Med Channels (EMS/Hospital Comms)
Some have recently become repeated

B01 463.0000 468.0000
B02 463.0250 468.0250
B03 463.0500 468.0500
B04 463.0750 468.0750
B05 463.1000 468.1000
B06 463.1250 468.1250
B07 463.1500 468.1500
B08 463.1750 468.1750

Cannot confirm if this plan is still in effect

C01 460.5250 465.5250 Note: This is HPD B-3 w/PL123.0
C02 460.5500 465.5500 Note: This is HPD South Central
Patrol w/PL123.0
C03 460.5750 465.5750
C04 460.6250 465.6250

C05 460.5750
C06 460.5750
C07 460.5750
C08 460.5750

Direct Channels
(Probably used at multi-alarms for on-scene communications.
Someone please advise if this is correct.)

D01 453.4250 453.4250
D02 453.5000 453.5000
D03 453.6750 453.6750
D04 453.9500 453.9500
D05 460.5750 460.5750
D06 462.9500 462.9500
D07 462.9750 462.9750
D08 460.6250 460.6250

Notes:

* Used when there are several multi alarm incidents. Assigned
by the
Dispatcher
** 462.9500 and 462.9750 are Medical Frequencies and have been
heard (in the past, but not lately) on Pearland and other area EMS
agencies and Life Flight.

Happy Scanning,

Ben

Just Program the 453, 460, and 462 frequencies. Don't worry about
the repeater input frequencies... 458, 465, and 467.

1553. Re: [HoustonScan] Possibility?

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-10-24 17:18:10 UTC
From: scasko@aol.com
Topic: 1518 Message: 1553

<<Friday night I heard an extensive period of what sounded like digital burst transmissions on the Hobby PD channel. Interspersed were brief open msgs like "tell me which radio is being keyed", and "which one was that?".>>

All three airports are on the same channel (B10 on the PD radios), and the dispatch center is at IAH. At least at IAH, they have switched to half Moto Astro radios (still in analog mode though). I forget what the other ones they use are, I shoulda looked. I will be working out there again Friday from 2-10 so I will check. I was working last Friday 2-10 also and didn't hear these.

There are identifiers that come up on the dispatchers screen (on the "marquee") that id the radio, and at the beginning of each shift each radio ID gets affiliated with a unit number. For example, last Friday when I worked out there my radio ID may have been "1234," which it what it would come up on the dispatchers screen as until it gets affiliated with a unit number. Once the roll call information is entered into CAD it would then show up on the screen as "21I62," the unit I was assigned that day. It may be that someone's radio got the wrong unit # affiliated with it and they were trying to fix it (the dispatcher hears you saying one unit number but another shows up on the screen). This is not an uncommon problem, and is usually just a typo when the info id being entered at the beginning of the shift (that's what happens when you try to hurry up and type in a bunch of 4 digit numbers).

One question regarding the digital bursts, were you able to tell if there was a PL tone with them? I didn't hear them on my radio while I was working so I wonder. They used to put the Morse code identifiers out without the PL tone, meaning we didn't hear them in the cars, but when they "upgraded" the dispatch consoles a couple years ago they put the PL tone back on the Morse code. Don't know if they had to do it, or just didn't think not to do it when they reprogrammed everything. The Morse code identifier is programmed to repeat if it gets cut off by a transmission, so if we get something going where we are talking on the radio a lot and it doesn't have time to finish it will keep going, and going, and going trying to finish. Now that there is no PL tone and we hear it, it can get annoying.

I don't know if it' could really be called simulacasting, they just have remote antennas at each airport (Intercontinental, Hobby, and Ellignton) all run by 1 dispatcher at IAH. I know that the Hobby units, at least last Friday, sounded terribly scratchy and very hard to understand. Maybe they were working on fixing this.

1556. DPS Channels

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-10-25 15:15:37 UTC
From: Karl Schwartz
Topic: 1556 Message: 1556

Does anyone have a list of the DPS channel #'s for the repeater freq? They use the same repeater pairs throughout the State but different PL tones and each PL tone is assigned a channel #. I know DPS Corpus is on Channel 13, but thats the extent of what I know...

1557. Re: [HoustonScan] DPS Channels

DPS State-Wide Rptr Pairs Pl Tones (159.2100 / 154.6650)

DPS Ch 10-18 are the rptr pairs.

10 PL- 103.5
11 pl- 107.2
12 pl - 110.9
13 pl - 118.8
14 pl - 123.0
15 pl - 127.3
16 pl - 136.5
17 PL - 141.3
18 pl - 162.2

This is from the list I had back before I moved from Texas in 1990...

Take with a big grain of salt...

Would it be possible for someone to tell me how to interpret the columns in the Houston Scanner Frequency list? I can't imagine the work that it must take to keep this voluminous list up, but I'm sure that there is a FAQ out there somehwere that might help me to interpret it. If someone could tell me what each column meant, I would appreciate it greatly. The For example, what does the first column represent? Thanks so much in advance for your help, and please reply to rfdillon@.... Thanks!

Thanks so much, Peter, for your reply. As I have just started this scanning hobby (I received a BC 245XLT 2 days ago), I really appreciate your help. Do you mind tell me what a PL tone is? And what is meant by the Frequency pair? All I know is to put 1 frequency in per channel. Thanks so much for my very elementary questions, Richard Dillon

To expand on Peter's reply ...

>--- In HoustonScan@y..., "Peter Kirk" <ipn-pen311@p...> wrote:
>
>>First Column is PL Tone
>>
PL or Privacy Line tone - this is a subaudible tone (under 300hz)
that is filtered out by the radio. The tone is used to distinguish different
groups of users on the same frequency. This is the same as the CTCSS
tones on FRS radios. Radios like the BC895XLT and BC780XLT can
decode and display these tones. You can even select which tones to
monitor or lockout. The BC245XLT however is tone deaf.

>>2nd Column is the Freq Pair
>>
The frequency pair lists the output frequency followed by the input
frequency to the repeater. You usually want to program your radio
to monitor the output frequency. Sometimes it is useful to monitor
the input frequency instread if you are only interested in near-by
activity. Some frequency listings may be simplex (as in direct mobile
to mobile) so there will be no repeater and no input frequency.

>>3rd Column is the user descriptions
>>
Third column is category. Fourth column is description.

BTW, Peter is a dispatcher for IPN - Incident Paging Network. You
can subscribe to their service for free and get email notifications of
events heard over the public safety bands.

I used to work for Baytown FD, just after they went on the 800 system. Now, I work for another dept and I will be in town in a few weeks and I would like to know, what frequencies and talk groups do I need to program to hear BAYTOWN FD ONLY. I'm not interested in PD or anyone in the county, just BFD.

Thanks,

Chris

1564. list column explanation

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-10-28 02:28:00 UTC
From: Myles Barkman
Topic: 1564 Message: 1564

I've added some info to my to my frequency list legend which explains the columns in my frequency lists.
Since I've been doing this stuff for about 15 years, I get pretty used to seeing it and understanding it and can't imagine what my lists might look like to a fresh pair of eyes. Some day, the legend may become part of a FAQ if I ever get around to writing one. I think there are probably several good trunking FAQs around that I could refer to.
I do get several requests from people to decipher and explain some of the things in my lists and I don't get back to them as quick as I'd like since I want to take the time to explain it properly. But it would be easier if I had a pre-made explanation for people to read or for me to send.
The new legend is located at http://www.clarc.org/~kg5ai/freqs/legend.html

I've also uploaded new versions of some of my lists and updated much of my backup site at the address in my sig.

1570. Advice requested for programming Harris County talk groups

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-10-28 23:43:46 UTC
From: rfdillon@hal-pc.org
Topic: 1570 Message: 1570

Folks, I recently received a BC245XLT scanner, and have been attempting to program the frequencies and talk groups for Harris County. In the list of frequencies that I have, Harris County has more than 30 frequencies between their downtown tower and their Tomball tower. Since I work near downtown and live ~20 miles from Tomball, I need to use more than 1 bank in order to hold these frequencies.
Next, I have inputted some of the talk groups into the bank that holds the majority of frequencies, but am wondering if I don't need to duplicate all the talkgroups in both banks, as this system spans both banks.
Does anyone have any advice as to how to best program the scanner for the Harris County system? Is someone who has done this successfully willing to tell me how it was done?
Also, I had a question about Cy-Fair VFD and Jersey Village. Are these trunked, and if so, how would I go about programming for them?

Thanks so much for ALL your GREAT help in advance, and please reply to rfdillon@....

1571. Baytown FD

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-10-29 00:06:03 UTC
From: Myles Barkman
Topic: 1092 Message: 1571

To hear the Baytown FD, program the HCSO trunked site in Baytown with the following freqs:
866.100, 866.550, 866.950, 867.375, 867.950, 868.050, 868.250, 868.650, 868.775, 868.9375

Then program the following talkgroups:
16432 Baytown Ch.A16 Fire 1 (Dispatcher simulcast on 154.250 MHz)
16464 Baytown Ch.A15 Fire 2
16912 Baytown Ch.A12 FD Ops TAC 6
16368 Baytown Ch.A14 Fire Admin.

Of course, as it says above, you can listen to the dispatcher on 154.250 MHz but you won't hear the responding units.

Cy Fair VFD and Jersey Village VFD are not trunked. Cy Fair is simulcasting on high vhf 157.450 as they are on low band 33.520. Jersey Village is 153.950 and is simplex.

Subject: [HoustonScan] Advice requested for programming Harris County talk groups

Folks, I recently received a BC245XLT scanner, and have been attempting to program the frequencies and talk groups for Harris County. In the list of frequencies that I have, Harris County has more than 30 frequencies between their downtown tower and their Tomball tower. Since I work near downtown and live ~20 miles from Tomball, I need to use more than 1 bank in order to hold these frequencies.
Next, I have inputted some of the talk groups into the bank that holds the majority of frequencies, but am wondering if I don't need to duplicate all the talkgroups in both banks, as this system spans both banks.
Does anyone have any advice as to how to best program the scanner for the Harris County system? Is someone who has done this successfully willing to tell me how it was done?
Also, I had a question about Cy-Fair VFD and Jersey Village. Are these trunked, and if so, how would I go about programming for them?

Thanks so much for ALL your GREAT help in advance, and please reply to rfdillon@hal-pc.org.

Jerald, I am using a BC245XLT which has no way of entering tones.
Would I still be able to pick up JV FD on 153.950?

Yes, the PL tone is used to activate a repeater and to unsquelch a radio
that has a PL decoder. You should have no problem listening to JV FD.

I have recently acquired a Realistic PRO-92
Trunk-Tracking hand-held. It has 10 banks holding 50
channels each. My problem is that Harris County has
well over 60 channels if I program all the sites. My
question is: Since I have to enter all frequencies
using one full bank and part of another, do I have to
duplicate all the talk-group codes? Does anyone have
a solution for this problem?
Thanks. Les

This question has two different answers, depending on the version of the 92 you have. If you have the version with firmware 1.00, which uses the sub audible method of trunking, then you can indeed split the channels across the banks and duplicate the talk groups in each bank. However, if you have version 3.25 or 3.28, which uses control channel tracking, you must do something different. First of all, each site on the Harris County system has its own control channel, so each site will need to be placed in its own bank. You can only have one active control channel per bank. As far as talk groups go, I don't think that all talk groups are repeated on all sites within the county, though I think that I read somewhere that all of the talk groups are repeated over the downtown site (I should note that I am by no means an expert on the Harris County system or trunking technology in general). Therefore, you could be selective as to what talk groups you place in each bank. I personally just monitor the downtown site, but then I live near downtown. I have the frequencies repeated in two banks, with one bank containing sheriff, constable and metro pd tg's and the other bank containing other pd and fd/ems tg's.

I hope this answers some of your questions. If you need more specific information, please feel free to ask.

Chris

I cannot speak for the Pro94 (Radio Shack) scanner, but I have had a similar Pro-92 for over a year, and I love it. It was a painstaking process to prgram and setup initially, but it was worth the effort. There is a computer software to program it, but I was too cheap to pay the $70 bucks for it! Good luck.

Folks, as you know, I have just recently started using the Bearcar BC245XLT trunk tracking scanner, and would like for some verification that I am programming trunked banks correctly.
Here is what I've done:
I programmed all of the downtown frequencies(including 4 control frequencies) into bank 1. I then programmed the outlying suburbs (Tomball, Clodine, etc. 4 different groups, each with at least one control frequency and several other frequencies) into bank 2.
I then uploaded 90 talk group IDs into each bank.
Is this the right way to do this? Does anyone have any suggestion or advice that would confirm just how to program this larged trunk system? Thanks so much in advance, and please reply to rfdillon@hal-pc.org. Thanks!

Check the basic business frequencies, 151.625, 151.955, 154.515, 154.540, 154.570, 154.600, 464/469.500 and 550, and search 465.700-470.000. There's a good chance you may find them there. If those don't work, try 451/456-453/458.000 MHz.

Don't forget to check FRS freqs too.
Our local Cinemark (Hollywood 16) uses both 154.570 and 154.600 (in College Station)

1596. West I-10 FD

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-11-08 02:15:28 UTC
From: bpckty1@webtv.net
Topic: 1427 Message: 1596

It looks like the West I-10 Fire Department has changed pager frequencies. Today, the vhf pager, 33.9200 MHz, has been silent, but 155.2950 MHz, which was West Harris County EMS' vhf pager, has been active with
W I-10 calls. No word yet if WHCEMS has a vhf pager or if they are using HC Trunked, only. Below is what the plan seems to be:

West I-10 Fire Department

15728 Dispatch - 1 (D1)(155.2950 Pager 11/07/01)
15760 Dispatch - 2
45200 Dispatch - 3 Mo City System, also called Disp 1
45232 Dispatch - 4 Mo City System, also called Disp 2
855.9625 Fireground Repeater
855.9625 Fireground Direct
866.5125 ITAC-2 Simplex, Life Flight

West Harris County EMS

15792 Dispatch -1(155.2950 pager moved to W I-10 FD
11/07/01)

West I-10 will be utilizing the West Harris County EMS VHF Freq. I have been working with them on their paging. They have bought VHF Minitor 3's and have not soley moved from low to high VHF Yet!

I will keep the list informed as it goes..

That's what they were doing. All 6 Patrol/SO Tac/Tacs/Mutual Aids, etc.
Plus, area agencies.

1601. ship channel fireboats

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-11-11 02:17:24 UTC
From: Myles Barkman
Topic: 1601 Message: 1601

Does anyone know what frequencies the ship channel fire boats use?
I am guessing that they are run by the Port Authority.
Yesterday, there was a fire on a boat in the channel that Channelview VFD was dispatched to and they were able to talk to the fireboat (Farnsworth) on Channelview's repeater. The fireboat had a DTMF code on key-up like you hear on CLEMC. If they have their own frequency in the VHF fire band, perhaps they use it there too. I think the Port Authority has a license on 155.775 MHz. I'd like to know what marine channels they may be on also.

Also, some new talkgroups have been programmed into HCSO units.
They only one I've been able to confirm is 19152 which is what I've heard district 4 call "southwest Tac-A".
I've heard 19088 but I don't know if it is one of the new talkgroups. Seems I heard someone refer to this as a channel 2.

I'm still not clear as to what talkgroup 9360 and 14896 are use for. They are both referred to as channel 10 but I can't figure out the channel usage.
9360 at one time was determined to be the HCSO information channel.
14896 was originally designated at a TAC channel CENTRAL-A but was then used for Central Dispatch and the dispatcher from 9360 (Ch.10) was used for both talkgroups.
What is Central anyway?

I heard what sounded like Astro digital on talkgroup 60000. Listen while you can to what you can. No need to worry, you can't do anything about it anyway.

From: Lester Bashaw
Topic: 1601 Message: 1603

Confirm message sent by Miles regarding HCSO call/groups...I know that this weekend, new radios were installed in a lot of the county cars, and the older radios went through some reprogramming. I suppose this means the painstakikng process of reprogramming my scanner with new talk-group codes..problem is, nobody knows what they are yet, or how many changed. Wonder why they did this? I also heard that many Harris County area DPS units got some of these radios as well.

Any plans to put out an updated list?

1611. Re: ship channel fireboats

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-11-13 04:24:13 UTC
From: joegay@frognet.net
Topic: 1601 Message: 1611

Myles,
The fire boats are operated by the Port of Houston Authority. I believe I did see a mention of a dispatch frequency in the 155 range in a series of messages about the boats which began with message #1172 on 5-20-01. I didn't have the time or patience to go through the thread and track it down. When the boats operate with the Houston FD they use an HFD frequency, which ever one is being used usually A1, A2, or A3 . Taking your message into consideration leads me to believe that they operate on the frequency of the fire dept they are operating with. I realize thats a lot of frequencies. I'm sure they also carry the full complement of CIMA freqs also. As for marine bands I don't know as I have never monitored those during a ship channel emergency. Elsewhere I have noted that the USCG likes to switch over to 21A (157.1?) for matters too lengthy for channel 16, so I would at least try that.
Good lisstening. I'd be intersted what else you find out

1612. Putin Visit

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-11-13 14:29:01 UTC
From: Christopher Hysinger
Topic: 1612 Message: 1612

While not directly related to anything I heard on my scanner, I was at Rice yesterday and saw some interesting activity. Yesterday afternoon, two large military helicopters, a Chinook and a chopper similar to the one the President uses (Marine 1) came in low over the campus and landed in the soccer fields just north of the Shepard School of Music. They were directed in by plainclothes agents with military looking radios. About a minute later, two more helicopters (another Chinook and the other type as well) landed in the same field. All four sat on the ground and idled for a few minutes before lifting off again. I assume this was a dry run for Putin's visit tomorrow. I think he is scheduled to speak at Rice at noon. It might make for some interesting listening, assuming any communications are in the clear. Did anyone hear anything yesterday?

BTW, Greenspan will be speaking at Rice tonight around 7 pm. Anybody hear anything related to that?

Chris

I wasn't scanning for most of yesterday afternoon, unfortunately. But
definitely program your scanners with all the U.S. Secret Service
frequencies. USSS provides security for visiting foreign heads of
state.

> BTW, Greenspan will be speaking at Rice tonight around 7 pm. Anybody
> hear anything related to that?

I don't know if he's important enough to have his own security detail.
If he does, it's probably Federal Reserve Bank Police. There are some
freqs reported in other places around the U.S. for the FRB, but I can't
confirm any of them myself. It wouldn't hurt to plug them in if you'll
be scanning in the area. Even if he does have a detail, I suspect it's
probably not that large enough to have much if any radio usage.
409.525, 413.875, 413.925, 415.1

1616. 240 MHZ Freq Range

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-11-14 01:41:27 UTC
From: Lester Bashaw
Topic: 1612 Message: 1616

Well, to answer your question about that freq range...this is a freq range used by military aircraft, mainly in the air/to/air and air/to/ground priority modes. Logrhythmic encryption will likely be used in the 800 mhz range for security details.

Hope this helps...I am not sure most scanners can pick up the 240 range...some of the newer expensive models can, I think. By the way..the 240 range is in the "AM" mode, not FM.

But, fear not...I am sure the campus police and HPD will be using their old radios, so there should be some activity. Might try 460.225 for starters.

I don't think these will be active since Putin's protection is a Secret Service responsibility, but it doesn't hurt to plug them in anyway.

> 165.375 Secret Service repeater

At a minimum also keep 165.2125 (USSS "Mike") and 164.4 (USSS "Papa") in your scanners.

> 453.200 Rice Police
> 463.675 Rice Police

Rice Police/EMS details will be on 453.2.

1620. RE: [HoustonScan] Re: ship channel fireboats

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-11-14 15:12:34 UTC
From: Rusty Caufield - Work
Topic: 1601 Message: 1620

I have checked with a friend at the Ship Channel FD and have found:

Their normal operations and Dispatch (Response) are done on the Ship Channel Police CH. If they reach the scene of a working fire they switch to one of their simplex ch's for fire ground and return to the primary at the end of the incident. They also have radios in the boats to cover the possible mutual aid agencies each particular boat may be working with, but I was told each boat is different by station assignment.

Hope this helps.

Subject: [HoustonScan] Re: ship channel fireboats

Myles,
The fire boats are operated by the Port of Houston Authority. I believe I did see a mention of a dispatch frequency in the 155 range in a series of messages about the boats which began with message #1172 on 5-20-01. I didn't have the time or patience to go through the thread and track it down. When the boats operate with the Houston FD they use an HFD frequency, which ever one is being used usually A1, A2, or A3 . Taking your message into consideration leads me to believe that they operate on the frequency of the fire dept they are operating with. I realize thats a lot of frequencies. I'm sure they also carry the full complement of CIMA freqs also. As for marine bands I don't know as I have never monitored those during a ship channel emergency. Elsewhere I have noted that the USCG likes to switch over to 21A (157.1?) for matters too lengthy for channel 16, so I would at least try that.
Good lisstening. I'd be intersted what else you find out

1622. Putin Visit to Rice

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-11-14 19:43:05 UTC
From: Eric C. Carlson
Topic: 1622 Message: 1622

Here's a report on the radio activity for Putin's visit to Rice today.

165.375 Secret Service - Commandpost (Some Encryption)
165.2125 Secret Service - Ops (Some Encryption)
165.7875 Secret Service - Former President Bush's Detail
409.625 State Department Diplomatic Security Service
407.6 State Department Diplomatic Security Service
460.425 HPD Citywide
460.4 HPD CID
453.2 Rice University PD/EMS

State Department activity was very brief, they were probably protecting
some of the lower-level diplomats.

Did you notice the short buzzing sounds (digital?) on 407.600? Also, HPD was also using 460.225 and 465.225. (Copied from the Antone's in University Village. Never did see the helicopters, though. There was a large, roped off area on the southwest side of the stadium, however. Or, did they land inside Rice Stadium? I did hear Rice PD talk about the University Club a couple of times.

Harris County Trunked, Alvin/Baytown/Downtown Sites, see Myle's list for the frequencies, Talkgroup 17040. Plus, I presume, the Sheriff, South District 3, Constable 8, Tac 3, Mutual Aid Channels, Webster PD, Galveston County Sheriff, League City. Check his Frequency list for the University of Houston. Possibly some of the frequencies assigned to the Main Campus may be used for Maintenance and other local, non-law enforcement, matters.

I got blasted by the dust and debris as the helos flew right over my head and landed about 50 yards away from me. I was at the roped off area in the north end of the east stadium parking lot. The helos landed in the grass field north of Alice Pratt Brown Hall.

sounds like someone read the SIMS II / Sitelens manual
and figured out what REMOTE INHIBIT and REMOTE MONITOR
are capable of..

how many police officers realize that ANY TIME THEY WANT
they can key up the officers radio (even turned off as
long as a battery is on it) and monitor the voice traffic
in the vicinity of the radio...

LOL!

i would think the police unions would have raised hell
about this, but i guess they either don't know or don't
care...

1634. Frequencies for West Houston

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-11-19 02:44:40 UTC
From: joegay@frognet.net
Topic: 1630 Message: 1634

A couple of suggestions for things you might want to monitor. From what you said about where you live and work, the major emergency services to monitor would be City of Houston. If you monitor the 8 Fire Dept freqs designated A1 through A8 you'll be covering all fire and EMS city wide, including the areas where you live and work. The specific frequencies are listed in message #1549 on 10-24-01. Program in the first of the 2 freqs listed for each channel. PD will take a little more reseach. I would look at Myle's list. The PD is divided into different frequencies for different parts of the city. You would need to put in the freqs corressponding to the parts of the city you are interested in. In addition to City of Houston, you may want to put in Village Fire Dept which covers the 4 or 5 little incorporated cities, Hedwig Village, Hunters creek etc. Check Myle's list for the VFD freq. They also have police seperate from Houston, but I'm not sure how that is organized. Depending on various things including exact location and equipment you might be able to monitor the west and NW suburb FD's. I'd try at least Cy-Fair which is being discussed elsewhere on this site and maybe West I10 (although I don't know how far west they are). Jersey Village is also a fairly large volunteer dept to the NW. I not sure what FD covers directly west of Houston, maybe someone else can advise. Others will also have ot clue you in on Harris County trunked (for sheriff and possibly some FD's out west).
Happy scanning

Astro is not encryption but digital modulation. Excryption would be like
DES-XL or DVP-XL, which uses a 21? character encryption key.

Your description and perception of digital is common but it
also contributes to a lot of misunderstanding and confusion.
Encoding is like the letters of the alphabet while encryption is
more like a language where each encrypting key represents a
different language.

I can encode this email message into US ASCII text which
you can no doubt read. I could encode it using the Greek alphabet,
or Japanese kanji, or simplified Chinese, or many others..
If you couldn't recognize the encoding, you might think the
message was encrypted when the problem is how to decode.

Some people think that if they can't understand it (digital) then
it must be a safe unmonitorable means of communication.
That is a dangerously false mis-understanding that has lead to
some (in my opinion) absurd laws in our country.

Speeking of decoding, just *when* is that affordable APCO-25
scanner going to be ready?

Uniden BC250D?
Posted on 11/19/2001 08:49 EST

We received the following from an "anonymous" but reliable source in Europe
about Uniden's efforts to tackle the digital-scanner market:
A source of mine that has contacts with Uniden US and has confirmed
pre-liminary development at Uniden of UB250D handheld that will have Apco25.
This will then replace the BC245 but will take at least 18 months. Uniden
send some large customers pre-liminary info/specs to check if there is a
market for it.
Strangly he did not now anything about a version for replacing the 780.

This would make it appear that the APCO Project 25 model being worked on by
Uniden will be a handheld with no immediate goal to replace the current
BC780XLT with a similar offering (which would make sense since there is
still a LARGE market for the BC780XLT as a general scanner and analog trunk
tracking model).
The word seems to be that any digital capabilities for BC780XLT will be done
solely by third party vendors with an add-on board which is still under
development (last I heard).

Try these if you have a regular scanner.

Ch.1 488.8875
Ch.2 489.0875
Ch.3 489.1125
Ch.4 489.0875
Ch.5 489.1125
Pasadena Fire Dept. 154.010
Houston Fire Dept is out there so look at 460.575. Also saw FOX(Police Helicopter) flying and heard it on 460.55

1653. new lists

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-11-27 01:00:34 UTC
From: Myles Barkman
Topic: 1653 Message: 1653

Got a couple of new lists out just in time for holiday travel.
A New Braunfels area frequency list for folks that might be heading to the outlet malls near San Marcos-http://www.clarc.org/~kg5ai/freqs/newbraun.html

A freq list for folks traveling I-45 from Houston to Dallas (or vice versa)-http://www.clarc.org/~kg5ai/freqs/hou-dfw.html

Since these lists are new, there is probably much improvement to be made to them. If you have any suggestions or corrections, please pass them along. One thing I may do for the I-45 list is try to figure out what TXDOT freqs are used in each county so you might be able to listen in on con(de)struction, or sand crews, or talk about road conditions. If you know what freqs are used in some of those counties, please pass them along.

Just a quick note to hint a new technology introduced in the Houston Area last night. Picked up AT&T Wireless on my Voicestream Phone. AT&T Wireless was just introduced 2 months ago here and since has had a big "balancing" problem trying to convert some towers to TDMA which were left from the PrimeCo ones. Now they are running on two different Technologies. As i see it GSM(Voicestream and Now ATT) sound quality is far superior than TDMA(AT&T, Cingular) Have two of something that is the same should offer some competition. Can anyone else pick ATT up? You can only do this with a Voicestream phone in Manual mode.

9 Baker 28
I was feeding as much as I could to Metro. Supposed to have been a carjacking that started it all. He was driving very erratically and continually made car to car contact w/ DPS and others trying to evade arrest. from my DPS contacts the chase ended with assistance from Eagle Lake PD and the suspects wrecked at Alt 90 & 102 in Eagle lake and then uneventfully (of course) taken into custody. I don't know why they changed to Ch. 8. THe radio clarity was still excellent. What made it sound like they were losing signal was that units were talking on top of each other and the dispatcher was incapable of disciplining the channel to specific information. She sounded thrilled about her job. She didn't even listen well enough to the streets being called out to repeat them correctly; and she had a headset and I had a squad radio speaker and it was all crystal clear. I guess it's all in how intent you are in really trying to listen. At least it ended with no good guys hurt and no bad guys getting away!! This IS the bottom line!

<< I don't know why they changed to Ch. 8. THe radio clarity was
still excellent. What made it sound like they were losing signal was that
units were talking on top of each other and the dispatcher was incapable of
disciplining the channel to specific information.>>

I was invovled in a chase from near-downtown Houston (Katy Fwy / Shepherd)
to Flatonia one night. We had to switch to channel 8 around Sealy because
there was too much static. My compadres back in the city all jumped us the
next night saying we cut them out of the loop when we switched over. While
they could hear us well, we could hardly hear each other. I guess the signal
having to go from downtown back to us was just too much for it.

<< She sounded thrilled about her job. She didn't even listen well enough
to the streets being called out to repeat them correctly; and she had a
headset and I had a squad radio speaker and it was all crystal clear. I
guess it's all in how intent you are
in really trying to listen. >>

I was off last night, what channel was it on (and which dispather if you
happen to know?). They are training 3 on nights right now and some of them
(and some of the vets too) are pretty lackluster.

If they switched to channel 5 (citywide) like they were supposed to that
is not a real dispatcher up there. That channel got moved down to 1200
Travis to the Command Center so that they could monitor things more closely
(supposedly). Unfortunately, they don't staff it with someone who has been
trained as a dispatcher but only to the level of the phone clerk ("Complaint
Taker"). So, when something good and high stress gets rocking and rolling it
is, by policy, supposed to be switched to the least qualified dispatcher, who
is cut off from all the pros by being a few miles away. Nobody to even sit
and help over their shoulder and help.

That is one reason I will avoid taking anything to channel 5 as much as I
can. The whole chase to Faltonia, over an hour, never left the Central
Patrol channel. We had a good dispatcher there and there was no need to mess
things up by switching to anotehr channel (inevitably half the officers don't
switch their handheld radios over and we wind up on 2 or 3 different channels
once they bail out, too).

It was mostly on Westside, then transferred to Citywide, then to car-to-car. It was sounding fuzzy when they approached Eagle Lake, could have been units on top of each other. Glad no good guys were hurt. Did Eagle Lake throw down spikes or did they just ram him off the road?

I also see that there is no agreement between AT&T and VStream, as I couldn't call out on AT&T with my unlocked GSM phone and VStream SIM card.

I think that AT&T is purposely keeping bith TDMA and GSM in Houston; will save them the trouble of doing it later when they roll to 3G nationwide in a year or two. What do you think?

Dave

Steve,
Thanks for your comments which were as usual very enlightening. One particular paragraph I could really relate to.--- In
>
> If they switched to channel 5 (citywide) like they were supposed to that
> is not a real dispatcher up there. That channel got moved down to 1200
> Travis to the Command Center so that they could monitor things more closely
> (supposedly). Unfortunately, they don't staff it with someone who has been

> Taker"). So, when something good and high stress gets rocking and rolling it
> is, by policy, supposed to be switched to the least qualified dispatcher, who
> is cut off from all the pros by being a few miles away. Nobody to even sit
> and help over their shoulder and help.

I worked in a state mental hospital here at one time and being a volunteer firefighter was on the hospital fire team. The hospital had several fires, a couple of really minor ones and then one with the potential to get really serious and never called the fire department. About that time we got this new fire alarm sysstem, which as such systems do , falsed now and then. FD always rolled. I asked the administration if we couldn't make this a formal policy, " Only call the fire department if their isn't a fire." They didn't see the humor in that and, of course ddin't see any need ot change the way they di business. Thankfully they did eventual move out of that 150 year old building without disaster. Another time I suggested we review a couple of things that went wrong during a disaster drill. The medical director assured me that wasn't necessary because, "Things always go smoother in a real emergency." You believe that, don't you?

And Amen! Amen! Amen! to the final comment.

Hi, my name is Brian Alley, I live in the Pasadena area and work in
La Porte. Right now I am using a Uniden beartracker800 BCT7 scanner,
it is not much and I have a hard time finding anything. I bought it
when I was driving over the road becasue it was easy to operate. I
just seen a reasonably priced handheld scanner in the new radio shack
catalog, model PRO-94, is anyone familiar with this unit? Will it
allow me to hear the trunk(I Have no idea what that is, but keep
seeig it everywhere)stations around my area? I really prefer a
handheld unit so I can easily take it wherever I need it,
Thanks,
Brian Alley

Speaking of Flatonia, I travel down I-10 quite abit. I always notice that
HFD's Ambulance dispatch (462.950) is always the last city channel to
go... It have great range! I've even gone as far as sequine before without
losing them... I don't know what they are doing at HFD , but it works GREAT!

Anyone catch what was going on in Baytown around 4:30pm today? I was driving home and heard someone on PIES (450.5875 MHz) trying to reach Baytown to have them activate their EAS system. I got home and heard them working some incident on TAC6 TG 16912 that was like some kind of liquid gas leak and homes had been evacuated. Later, residents were allowed to return to their homes by foot but no vehicles.
This is the first time I think I've heard PIES used for something other than a radio test.

YEs, I heard it. At the intersection of Main and Fayle, under the road the gas main was leaking into the sewer system. An area one block around it had been evacuated, I think they said to a nearby school, have not heard anything since.

A quick explanation of PIES with the limited info I have.
P.I.E.S. stands for the Public Information Emergency Network.
All the area Emergency Management offices in the Houston area monitor the repeater on 450.5875 MHz.
KTRH is sort of "Net Control" since it is the area EAS station. If there is some sort of emergency in a particular area, the idea is that that OEM would contact KTRH and KTRH would in turn put out a bulletin. Or, if KTRH received notification of some type of emergency for an area, it would contact that OEM via radio so that the city could notify it's citizens by whatever means (sirens, etc.). It is not used very often. You can hear them test the system every Monday morning at 9:15am. KTRH will conduct a roll call of every station that is supposed to be monitoring.
Since all stations should be monitoring, this allows neighboring cities, a "heads-up" to a situation what could potentially affect them as well.
They used to use 161.640 MHz but moved to a repeater, I suppose for better range for stations all around Houston.

I know there are others on this list that could elaborate...any takers?

It's called TOWER and POWER!

Switching to 8 while "cruising" to Flatonia is good sense; but that whole Eagle Lake, Hungerford, Kendleton area is pretty clear communication area for HPD and HFD UHF channels. The tower location and the boost in power on the westside channels (a while ago after annexation) really helped. I got a few HPD friends who live out west as far as Halletsville. Their "A" units fizzle out from hitting the repeater clearly just East of or around East Bernard; but the mobiles hold a pretty strong signal well past Sealy and even into Halletsville (no substitute for a ground plane and POWER!). The advantage of sticking to the repeater if you can is that more ears can hear and can help (both in setting up spikes beyond simplex range if it's a "really moving" chase and also ears in dispatch to have more than one pair of distracted ears listening to keep info straight - remember the tapes aren't always maximum clarity!).
Y'all stay safe and keep the bottles closed 'til ya git there!!

Yes, That is one on Cy-Fair's new Freq's.

It was in use yesterday for Texas Volunteer Fire Fighters Relief Fund, 4th annual Parade of lights up Hwy 6.

It was temporarily installed and that DPL was chosen just for the event.

I was in the Park Ten/Park Row area this morning and happend upon a building incident (apparently a blown transformer that blacked out the area north of the Katy Freeway between Highway 6, Barker Cypress, and Saums Rd. This was the first time I had heard the HFD using a simplex frequency (no squelch tail/squawk, or transmissions on 458.9500). So, if anyone wonders if the D bank frequencies are used, the answer is, yes.

The quest continues.

Happy Scanning...

The "D" Frequencies are used quite frequently. Whenever HFD makes any hi-rise fires, the first arriving company typically advises all companies to go to D3 or D4 upon arrival. Some of the Captains that I work with, who traditionally are not too educated in radio communications, have figured out that they can talk amongst themeselves without having to battle units on the other side of town. The other day, I made a fire with E-49 and they were using Motorola Family Talk radios so that they didn't have to compete with other units.

Also, many fire departments believe that simplex frequencies work better in high rises than duplex-that the simplex signals penetrate better. I'm not sure one way or the other. Also, if you mess up they can't hear you all over town, which takes some of the fun out of listening.

I think it is actually in HPD procedures manual to use the simplex frequencies in hi-rise bldgs. I realize that it is fundamentally the same signal being transmitted, but I wonder if, with the attenuation of the signal caused by the steel frame of the building, if units using simplex might not be able to hear a unit that is transmitting 500 ft at times when the (duplex) signal is not reaching the repeater.

If all the fire fighters are inside a building they can talk amongst themselves better with simplex because the signal doesn't have to pass through the building twice to get to the repeater.

I got involved with a stolenpickup with one of these on it one night. The owner came otu fo a bar and it wasn't there, so he called the tracking company and they picked it up right away eastbound on the 610 loop. We were looking for it and they said they would start flashing the bed light. Easy to spot at that point. As we were getting lined up behind the truck he took an exit (Wallisville I think) and pulled into a Texaco. The guy with the remote control (who I was told was in San Antonio) killed the ignition and then locked the doors. Crook under glass. Once we were all in the right spots we had him unlock the doors and the show was over. Very cool system. If you have a cell phone permanently installed in your car they can turn it on and listen to what is going on inside too. I'd love to get some of those tapes....

The tower in Brazoria that was downed was used for wireless internet.It was rohn 25 g size about 125ft high,
with a scaffold built around the tower.It was not properly
guyed; an accident waiting to happen.This is the second time this tower has collapsed,First time it fell through the roof of the Fire department next door.

Who is using TG 59248 on the Galveston County system?
Sounds like ops for some fire department.
Using unit numbers like 102 and 107.
For that matter, who is using 59216? Heard that just now too.
I think I heard some guys on 59312 switch to it so it could all be
Bacliff.

I haven't been listening to Galveston County much lately so I may
need someone to run through the list I have and update me.

Ever since I moved from Seabrook to Webster, I can not get a decent Galveston County trunk signal
from Texas City.
I wish they would make a tower in Friendswood, that would help out tremenously and I could help
you out tons.

What sucks is that my apartment doesn't allow outdoor antenna (like I had in Seabrook).

When I am in Galveston County, I usually only hear the groups you have listed on the site. Never
came across
any new ones.

I used to live in Webster too. I went to Radio Shack and bought a mag-mount cell phone antenna and a TNC-BNC adapter. I could hear the signal just fine, but only if they were broadcasting from Texas City. If I wanted to hear the Galveston tower I was out of luck.

Don't count on Galveston County putting a tower in Friendswood. Friendswood and a lot of communities in Clear Lake use either the Harris County Smartzone System or their own system as in the case of League City.

Still, you can use the cell phone antenna and it can improve reception, even on a ground-floor apartment.

Check the 'net for some recent (last few years) rulings which
curbed a landlord's ability to restrict a tenant's rights to using
rented property. In one case (can't find link) the FCC intervened
in favor of allowing antennas placed on the tenant's area (but
not on the common areas like the courtyard and pool).

They may be violating your rights to "fair use" of the property.

IANAL, etc.

Saw these on a radio out in Chambers county one night. How exactly are these channels used? Do they dynamically regroup several TG's over to these during a chase?

Rumor has it that the City oif Manbel is putting a UHF LTR Trunked system to get away from 800mhz. The Chief has had is fill of bad coverage.

City of Pearland is getting a smartzone site at their PD on their Verizon tower.

I have not seen any licences pop up on the FCC web site. Keep an ear out!!

Mike

Pearland is getting a smartzone of the proposed Manvel LTR or is Pearland getting a new smartzone for Galveston County?

(or maybe it's just wishing Galveston County would get a friggin smartzone in the northern half of the county) :)

New Topic, whole group: Any ideas on when other small cities will convert to the Harris County or Galveston County trunk?

Seabrook
La Porte
Nassau Bay
Lakeview/Shore Acres
Friendswood
Deer Park
and CLEMC (EMS)

What about Houston PD, FD/EMS??

Traffic might want to stay on UHF (better range)

In our area (Walker County) UHF LTR was part of the idea list of how to fix our system, with the system operator being Teletouch communications, the reborn name of East Tex communications.
The FCC paperwork is in the name of the VENDOR, not the City

As with all trunking, there is a monthly fee per radio in service. A form of Nextel with out the dial in phone number

SmartZone Radios

SmartZone mobile and handheld radios are designed to utilize the SmartZone trunked radio system efficiently. Once all the older SmartNet radios have been replaced with SmartZone radios, the seamless roaming capability can be utilized to maximum capacity and the overall quality of radio signals will be greatly enhanced.

Terms and Definitions
800 MHz ? A designation for a specific band of frequencies assigned to trunked and conventional systems.Inter Local Agreement (ILA) ? Agreement between Harris County and Outside Agency for access to Harris County 800 MHz Trunked Radio System.Mobile Digital Terminal (MDT) ? Communications device which uses a computer and a radio for digital communications.Regional Radio System ? Radio system that provides wide area radio coverage over multiple jurisdictional boundaries.SmartZone ? Wide area trunked radio system that operates much like a cellular telephone system with multiple tower sites, and is able to provide public safety radio communications to any, or all cell sites over large geographical areas to many users simultaneously.Trunked Radio System ? Radio system which is controlled by computers and allows for the ordered dynamic assignment of radio channels to as many users as needed.

SmartZone Radios

SmartZone mobile and handheld radios are designed to utilize the SmartZone trunked radio system efficiently. Once all the older SmartNet radios have been replaced with SmartZone radios, the seamless roaming capability can be utilized to maximum capacity and the overall quality of radio signals will be greatly enhanced.

Terms and Definitions
800 MHz ? A designation for a specific band of frequencies assigned to trunked and conventional systems.Inter Local Agreement (ILA) ? Agreement between Harris County and Outside Agency for access to Harris County 800 MHz Trunked Radio System.Mobile Digital Terminal (MDT) ? Communications device which uses a computer and a radio for digital communications.Regional Radio System ? Radio system that provides wide area radio coverage over multiple jurisdictional boundaries.SmartZone ? Wide area trunked radio system that operates much like a cellular telephone system with multiple tower sites, and is able to provide public safety radio communications to any, or all cell sites over large geographical areas to many users simultaneously.Trunked Radio System ? Radio system which is controlled by computers and allows for the ordered dynamic assignment of radio channels to as many users as needed.

Hi, i am a new memebr from the Pasadena area. I work in La Porte (have a Diesel shop there).
Is anyone familiar with the scanner that is on sle right now at Radio Shack for $149? It is advertised as a dual trunking scanner, whatever that is. I am using an old uniden bearcat scanner right now, but am sure I am missing lots, I keep hearing about trunking but have no idea if mine will pick it up or how it works even.
Thanks.

the handheld you are referring to is the pro-94 which is a 1000 channel trunktracker and is on sale for $149 at that price it is a good buy.....i just got a brand new pro-2053 alpha numeric 300 channel trunk tracker last night and i am hooked on it already.....and it is on sale for $179....but if u want a handheld scanner radio shack new one the pro-93 the handheld twin of the pro-2053 is suppose to go on sale the day after x-mas for $169 and the reg. price is $249....so u might want to go that route

Thanks. I am in no big rush for one. the one I have now I use hear at the house, but would be nice to have something that would folow what I want and I could program to only search what is active in my area. Right now I get mostly stuff from Houston it seems, the north and west sides of town mostly.
Brian Alley.

Does anybody know the freq(s) of the downtown dynegy ice plaza? I think they are using Theatre District radios that have been rented out, but not too sure.
